बt. Fillo-metinit. The name of a pseudo-saint of the Roman Catholic church, whose worship com plfed the name to Florence Nightingale, probably from its resemblance to the Greek and Latin P'hilo mela, a nightidgale.
Q \(z^{4}\) In the jear 1502 , a grave was found in the ceoletery of St. l'riscilla, by which were the remains of a plass vase that had held blood, the indication of the buria place of a martyr. The grave was closed by three tile ters: WVMIDN. WDXTECUAFI. There were alsorndel ters: CNMEN. PAXTECUMFI . There were also rudels papalm-branch. The inseription had been yead by placing the first tile after the two otliers, thus: 'I'ax fecum likmena'- 'leace be with thee, l'ilumena; and Fllumena was adopted as a new saint in the long list of those fo whom the lioman ehurcle has given this title, It was supposed, that, in the haste of closing the grave, the times
had been thus misplaced. Thereupon a devout artisan a priest, and a nun, were all severally visited by visions if a virgin martyr, who told them the story of biocletian's love for her, of her refusal, and subsequent natrisrdom; and explained, that, having been onee called Lumena, she was baptized Filumena, which she explained as a danghter of light! Snme human remains
worked presented to Mugnano, and, on the way, not only paired her own skeleton, and made her bair grow. So oany wonders are said to have been worked by this plantom saint, the mere produce of a blundered inscrip thon, that a book printed at laris in the year I847 calls her 'La Thanmaturge dut 19 me Siecle, and she is by fir

REMARKS AND RULES．
}

Tht：pronmeiation of the frcel：and Latin proper names which oceur in the Seriptures is governed by the same rules that determine the pronunciatiou of other Greek aud Latin names，（See p．1654．）These rules，so far as they relate to sgllabication and the sound of the vowels，are also generally observed in the pronusciation of the proper wames derived from the febrew；but the true accen－ tuation of these names cau not now be ascertained，the original pronuwciatiou of the 3 Iebrew language having long been lost．The usual course，therefore， has been to be grided by the correspouding Greck forms in the septuagint． But，in a multitude of eases，the Greek word is so different botlif from the Be－ brew and the English as to afford wo assistance in determining the proper place of the aceent．In such eases，regard must be had to analogy，general eustom， euplony，the nsage of the poets，and the anthority of orthoüpists．It is，how－ ever，extremely difficult，in many instanees，to decide upon the best pronucha tiou；and to preclude all doubt or diversity of opinion is obviously impossible．

The course pursued in the following Table has been to give first that mote of pronumeiation which is cleemel to be best supported，and to subjoin，as an alteraative mode，any other pronunciation which has，to any considerable extent，the sanction of jresent and reputable usage．The mames in the Vo－ eabulary have been aceentel，clivided iuto syllables，aut marked in accordance with the system of notation employed iu the previons part of this work．The consulter will not，therelore，require any Rules to guide him to a correct pro－ nunciation；but the few which follow－being short nut easy to remember－ may perhaps be of some use when he happens not to have the Dietionary at hand．

\section*{にじLES。}

1．In IIcbrew proper uames，the letters have their usual English sounde， execpt in the eases specified below．Sce Prexciples of Proxleciation， 1．xil，et seq．，especially with refereuce to final a macecuted（ \(\$ 4, p\) ，xliv），whicli is here marked i ，to point out the true quality of the vowel，and thus prevent the not uncommon error of sonnding it like \(\bar{z}\) or \(Y\) ．
2．Every final \(i\) ，forming a distinct yyllable，has its loug sound；as，A－bish＇－

3．The rowels ai are sometimes pronouncel in one syllable；as，\(\Pi u^{\prime}\) shaf， Si＇zal ；and sometimes intwo；ns，Skom＇ma i，Ear－zil＇la－l．When pronouned
 Some speakers choose to give them the diphthongal sound \(\ddot{i}\) ，or \(\bar{i}\) ；but the practiee，as Smart observes，is far from being common or established．
4．The rowels ei，when followed by a consonant，form a digraph，nud are pronounced like ei in seize；as，Cēillan．When followed by a rowel，they are pronounced in separate syllables，and the \(i\) is generally sounded like consonaut \(y\) ；as，Sa－métus（sa－mé＇yus）．
5．The vowels ia，following an accented vowel，are prouounced in ope sylla－ ble，the \(i\) taking the sound of consonant \(y\) ；as，Ban－ma＇ia（ban－nā＇ya）， \(1-s \bar{u}^{\prime}\) iah

6．The letter \(g\) lias its lard sound befure e and \(i\) ，as in the English words get，give ；as，Gethscmanc，Gilead．Dethphage，in consequence of having passed through the Greek of the New Testament，is an exception，the \(g\) being sounded soft，like \(j\) ，conformably to the usual English mote of pronouncing words derived from the Greck．
7．C\％is pronounced like \(F\) ；as，Chaldea，Finorh．Liachel is the only execp－ tion，the ef in this uame being somuled like ch in olect．Cherub（kersub），a city of the Imaylonish empire，must not be confounded iu pronunciation with cherab，one of an order of angels．
8．（ientile uames endiug in－ite（sjog．）and－ites（pl．），together will feminite nouns of the same class in－itess，are Jinglishl formatives，abd follow the aceent of their primitives；as，Am＇mon－ite， \(\mathrm{s}^{\prime}\) ra－el－ztes，Ca＇mean－it＇ess．The same is true of gentile adjectives ending iu－itish；as，Mónb－it＇ish，． \(1 /\) ruti－an－it＇ish． Gentiles in－ene aud－ine，with thele plurals，are also Anglicized both in spell－ ing and pronunciation ；cxecpt Nag＇da－le＇ne，which is commonly thus pro－ nomeed，as a classical word，the Anglieized form－which does not oceur iu the Scriptures－being Mag＇de－len．

\section*{II．－－NAMES FROM THE ANGLO－CATHOLIC VERSION．}

The Roman Catholle translation of the Latin Fulgate into English，com－ monly ealled the Donay Bible，and originally published by the English eolleges at Douny and Rheims（the Ohl Testament in two rolumes at Donay in 1609 and 1610 ，the New＇lestament in one rolume at Rheims iu 1582）， differs，in about 2150 instances，from the Common English Versiou of the Seriptures（translated＂out of the original tougues，＂and first puhlishel at London in 1611），in regard to the orthography of proper names．The fol－ lowing list contains a selection of about 1200 of these variations，being all that present any diffeulty of pronnciatiou．

There is no uniform or established usage among Catholie seholars in regard to the pronunciation of the proper names in the Donay Bible；and，such being the fact，it is evident that an authorimative smanard is to be sought in an appeal to general priuciples alone．Some of the names are pure Greek and Latiu，and must，therefore，be pronounced in accordance with the commonly received rules which determine our pronneciation of other words
from those languages．Frequently，however，the translators have Anglleizet the names to a greater or less degree；sud，in eases of this kind，the cor－ responding names in the Common Version，－where the differeace is not too great，－or the acknowledged analogies and tendencies of the English lagguage，may be taken as guides to the correct accentuation．In a con－ siderable number of names of this class，the proper seat of the aceent is determiued by the guantity of the penultimate vowel in Greck．In other instances，we have the recorded decisious or opinious of good prosodists or orthoëpists，as Labbe，Walker，Müller，\＆e．Such，in general，are the principles on which the pronunciations given below have teen determined； principles essentially the same as those adopted by Walker iu his＂：Kiey，＂ and carried out slso tu the former part or this Vocabulary．Great care has been takcu to apply them with entre consistency and exactness；and it is hoped that the value of the result will prove to be not greatly dispro－ portioned to the time and labor expended in the exectution of the tasta．

\title{
PRONOUNCING YOCABULARY
}

\section*{GREEK AND LATIN PROPER NAMES.}

\section*{PREFACE.}

Is the editfon of Webster's Unabritged Dletionary published in 1str, Walker's liey wae, xith very sligut omissions, made the basis of the Table of Classlcal Proper N゙ames, and with it wero iucorporated such aiditional names as were furnished by Carr and Trollope, with a few from lreund's Latin Lextcou and Pauly's Real-Eneyclopadic. No attempt was made to verify the accentuation. So far, indeed, as the prounuciation of the names was concernei, it was proposed to the editor to do little more than correct the errors of sylableation.
But in the present edition a very differeut work has been undertaken. Walker's liey has, indecd, in a sense, been taken as a basis; but it las beeu used with great freedom. Not a word now remains in the Table on Walker's authority alowe. Nor does the pronuuciation of any word in the Table rest on his sole nuthority, exeept in two or three instances; and then the fact is stated lu the margin. The substance of the Voeabulary has also been greatly elanged, seremal thousand words having been struck out, aud a still greater number introduced in their stead. The limits, however, of the former Table have, In necordance with the wishes of the publishers, beeu nearly kent iu this edition, which contains about fourteen thousaud names.
Of the words omltted, a majority are fuch as could not easily be nalsjnoronneed. To this class belong, first, all monosyllables; uext, all dissyllables In which the peuultimate vowel is followed ly two cousonants whieh are not a mute and a liquid. Words of rare oceurreuce and of little nuthority have given place to words more frequently met with, the prounuciation of which could be given with greater confidence. There is also a cousiderable dass of fictitions names found in the poets, which should seareely be included is any dictionary, beeause their form and pronunciation are both determiucd by the verse iu whiel they are found. Words judged to be of this class have been omitted witls gome freedon, lat, in general, the practice has been to abmit words of well-asecrtained pronunciation, according to the principles given below, and to exelude such as are doubtful; for the sole value of the Table depends on its trustworthiuess as a gride to correct proumuciation. Of the names added, all have three or more fyltables, and all are such as might possibly be mispronounced even by a persou aequantex with tho general rules of pronunciation. Thus, no word has been added in whel tho penult is long by positiou, or contains a diphthong.

But the attention of the editor has been chicfly directed to the acemtuation of the Vocabulary. Thisjs, of course, the fundamental and the ruling point, and lie has devoted metinted lahor to it. There is no worl in the 'lable whieh he has not examined with conseientious earefulness. Not that he has jurestigated the uature of each penultimate vowel by tracing Its history, or by looking up fer limself the authority of the pocts. That would have been more than cuough work for a lifetime. But the Greck language, with its distinct long and short vowels, and its diphthougs represented by single vowels in Latin, is a ready helper in a multitude of eases, and other eases are no less indubitably anttled by the rule of position. Neuter phurals In -it, from acljeetives in \(i s\),

New Hinea, Cosin., 1861.
have also been admitted without further question. Lint rules to which there are exceptions have not beeu permitted to settle any ease. There remathed therefore a multitude of words which required investigation. In respeet to every one of these, the editor has collated the best suthorities, and has giren the resulte. Now, it is not to be denied that these authorities have, lu some enses, doubtless, heen themselves governed by the general rules of pronunciation. But even if this is true, we have at least the concurrent judgment of emineut scholars who have made the subject a study, that these are cases iu which the gencral rules may apply.
The authorities to which reference is made are divided into two groups. The first group consists of Passow, Frecxd, lilotz, Pate, and Ficciolati; the second, of Walieer, Smith, Pally, Caif, Lamne, Liddeli. \& Scott, Biscioff \& Möllier, Formakr, Scheller, Mïller, Fhijlini.

The Table is so printed as to iudicate suffeiently, by the omission of margimal references, and by those which are inserted, the basis of enelh promunciation.
1. Words concerning whose prounciation there ean not be auy question are printed without any marriual note. Such words, for instance, are Terpsich'ore, of which the Greck form has omicron in the peuult; Ther-li'u, which in Greck has the dipluthong a in the penult; The-mista. who o penult is loug by position; and The'mis, a disssllable.
2. Those words also stand without any marginal note whoso proumelaton has the authorlty of any two of the names contained in the first group of authors given abore, or the authority of auy one of the first group together with oue or more of the seeoud aroup.
If, however, the authorities are divided, then, as a general thing, the two prommeiatious are giveu, and the authority for each is indieated by marginal notes. But sometimes, when the anthority for one pronunciatiou is sulfient according to the foregoing rule, and that for the other defiement, the lather authority only is indicated.
3. All the remaining words in the Vombulary hare the authority for their pronunciation giveu by marglual initials.
Could more time lave been takeu for investigation, thats third class of mames conld doubtloss have been still further diminished. Scholars will probably discover some words in it whose freek equivalents lave been simply over looked by the editor, or which for other reasous might hare becm left without refereness. But in some eases the authoritles lave been eited ouly tecause the editor desired to adhere to the simplicity of his plan, and to be able to way that ho hal adhered to it in all strietness.
In couclusiou, it may be faid that a Prououneing Vocabulnry of Clussical Names ean not be quite fatlafnetory without descriptive definltions. 'I'lue number of instanes in whele words of the same form refer to diflurent persons or places is so great as to make it somewhat doubtful, iu a circu case, whener or not the word in the Table ls the one whide is looked for.
T. A. I.

\section*{RULES}

\section*{FOR PRONOUNCEG TJE VOWFLS AND CONSONALTSS OE GREEF AND LATIN PRORER NAME：Y．}

It whll be pereaved by a glance at the following Table，that the indeated accentuation of the rords，amd their separation into syllables，prevent the necessity of inserting any thing here to guide to a correct pronunciation， except the rules for the sounds of the vowels and consonants．

The notation of vowel－sounds which is ased in other parts of the Dietionary has beed omitted here，bectuse the two prinelpal marks employed in it， namely，the long and the sliort \(\left[^{-}\right.\)］ ，have universally obtained a very dif－ ferent signifieance，when applied to Greek and Latin words，from what they have in English，being used in the former languages to iudieate quantity only， while in Euglish they are simple signs of quality．As Greck and Latin words which are long in quantity，are，in thousands of tnstances，short in quality， and those which are short in quatity are as frequently long in quality，it could hardly fitil to produce confusion，if the signs of quantity were used，in a classical vocabulary，to indleate the quality of the vorrels．In a few classes of eases，marks have been applied to certain consonants，fo order to prevent an erroneous pronnaciation；as，for example，to \(e\) nul \(g\) ，when they lave their soft sounds（like s and \(j\) ）before（＇，\(i\) ，or \(y\) ，but are separated from the vawel
 most part，howerer，the am has beeu to dispense with diacritical marks，and to rely on the rules for pronunciation，ami on oceasional referenees to these rules，for such assistance with respect to prontuciation ns is not supplied by the aecentuation and syllabication．
In settling the place of the primary aecent，which is the first and most important point in the pronuncation of a worl，the aim，of course，bas been to follow the ancient and simple rules，which direct，that in words of two s；llables，the peeult be accented；that in worls of inore than two syllables， the penolt be aecented if it is long in quimity，but if it is not long，that the antepenult be accented．The place of the secondary accent has in all donbtful eases been determinct by conslderations of cuphony alone．The words have been divided juto syllables，in necordance with the commonly received rules on that subject．The rules for pronuciation which are given below bare been derived，in the maju，from Walker．Sometimes the language of Grant，or sume other grammariau，has becu preferred

\section*{Reles for：the Toweis．}

1．Any rowel at the end of an accented syllable，and e，a，and \(u\) ，at the end of an unacecutel syllable，hare the long linghsh sound；as，Cato，Ce＇crops，Dit－ rto，Sollon，Cu＇mx，Me－tis＇sa，Mo－los＇sus，Tu－lin＇gi；in which words the tinal vowels of the first syllables have the same sound as the corresponding vowels iu the first syllables of the Enghash words patper，cc＇dar，sillent，cotion，du＇ty．
2．A ending an manceented syllable las the sound of \(a\) in fother or io last， as，Ga－bi＇na，A－re＇ne，prowounced Gah－li＇nah，Ah－s＇鱼e．

3．I ending a final syllable has the loug sonnd，as，To＇mia At the end of luitial unaccented syllables it varles，somewhat indefinitely，between \(i\) long，as I－u＇lus，and \(i\) short（lake 2 io \(\mathrm{f}^{\prime}\) re，as in I－da＇li－a．In all other cases，\(i\) emting sounarecnted syllable han it a short soudd，As in pin．

4．V＇is prononneed as \(i\) would be in the sathe sltuation．
5．．\(i=\) and \(a\) are pronounced as e would be in the same situation．
6．If a syllable end in a consonant，the vowel has the short English sound； as，Bol＇bus，Del＇phi，Cin＇na，Mos＇chus，Tus＇ert，in which the vorsels have the same somads as in the Eaglish words man＇ner，sel＇dom，din＇ner，seeffer， muster．

Exceptios，－E in fimal cs is pronounced as in the famillar proper bame An＇dus．

> diches fond the Consonints.

7．\(C\) before \(e, i, \eta, x\) ，and \(a\) ，is prononneed like \(s\) ；before \(a, o\) ，and \(u\) ，and before consoumats，like \(\lambda_{i}\) ；as，C＇\(e^{\prime} a\) ，Cicte－ro，Cy＇mrus，Ca＇sur，Ca＇li－a，Ca＇to， Co＇cles，cu＇mar．
8．\(G\) before \(c, i, t, a, m\) ，or another \(g\) follownily \(e\) ，has the sound of \(j\) ： bufore \(a, 0\) ，nud \(n\) ，nud before consonants other than \(g\) ，as above execpted，the hard sound，as in the Figlish words gate，gone；as，（icio，Cii－gan＇tes，Gy－ge＇－ ns，Ag＇ger，Ga＇bi－i，Gor＇gi－as，siugun＇tum．
9．Ch has the somul of \(\%\) ，but it is silent before a mute consonant at tho beginuing of a word；as，Chtho＇nia，pronounced Tho＇ni－a．
10．\(T, s\) ，and \(c\) ，before \(i a, i e, i i, i o, i u\) ，and \(c u\) ，preceded immediately by the acent，In Latiu words，as in linglish，change into shand ah．Wut when the \(t\) follows \(s\) ，\(t\) ，or ，or when the accent falls on the first of the vowels following， the consonant preserves lts pure sound；as，hict－lus＇fius，Brut＇fi－i．Mit－fi＇a－ des，\＆e．So also in the termination tion；as，The－odoti－on．
II．\(S\) has，in general，the sound of \(s\) in this．Final s preceded by \(e\) ，or a liquid，has the sound of \(\approx\) ．

12．Initial \(x\) has the sound of \(\approx\) ．
13．Initial \(p\) h before a mute is silent ；ns，Phthi＇a，pronounced Thi＇a．Initial \(p\) before \(s\) is silent ；as，\(P^{\prime} s y^{\prime} c h c\) ，pronounced \(S_{y} / l_{i}\) ．Initial \(n\) before \(t\) is sileut； as，Ptol c－maz＇us，pronounced Tol－e－matus．

14．It the beginning of words we frequently find the uncombinable conso－ mants \(m n, t m, \& \subset\), as，IIne－mos＇y－ne，I＇mo＇tus，\＆c．These are to be prouounced with the first cousounut mute，as if written Jicmos＇y \(n c\) ，Moslus， \(\mathbb{d e}\) ．
lifmink．I．The termination cus，derived from the third declension of Greck contracts in हi，s，although uspally made a single syllable in poctry，is resolved into two syllables in the Table．This is also done by Walker and Trollone；is defended by Labbe and Carr；and may be conceded to the exigencles of poetry． The other syllabication，by which eus has the sonnd of use，as in the nonn aluse， is also given，and shonld be followed in pronnaciation in all ordinary enses．
2．With regard to words which oceur so frequently in English use that they may be said to hare become Anglicized，it should be stated that the Table aims only to give the classieal pronunciation．Eycry one must judge for himself whether or not it will secm like affectation or pedantry，in nay given case，to be classically correet，

\title{
GREEK AND LATIN PROPER NAMES。
}

1HE abbreviations Pu., F., \(K_{\text {., }}\), Pe., Fut., S., Py., C., L., Lid., L., For., Sch. W., M., and Fr., stand, respectively, for Passou, Freund, Klotz, I'ape, FaccioIuti, Smith, Pauly, Carr, Lable, Liddell of Scott, Bischoff fo Möller', Forbiger, Scheller, Walker, Miller, and Frijlink. The titles of the works referred to
are given on page 1654. The figures whel follow certain words in the Vo. cabulary refer to corresponding Rules of I'ronuneiation, also ou page 1654. The figure 6 , for example, appended to Abontes, refers to Rule 6, which shows that the rowel iu the last syllable has its loug Englishs sound.

\title{
ETYMOLOGICAL YOCABULARY
}

\title{
MODERNGEOGRAPHICAL NAMES.
}

\section*{INTRODUCTORY REMARKS.}

Fnoper, unmes of places are, for the most part, compounl words. As the former or the latter part of the empound is often the same in different words, it has the appearance of a prefix or a suffix, and may be treated as such; as the prefixes aber, ash, north, stone; the terminations bury, kam, ness, wich. The following Index includes the princjpal prefises, terminations, and formative syllables, especially those which are component parts of English names. Subjoined to the lndex is a brief Aphabetical List of geographical mames not included therein, giviug their derivation and signification, so far as these could be asectained. A great many names are necessarily omitted, their history amd signification being aitogether unknown. Many others are omitted, the etymology of which is eitler obscure or murely fanciful. I'rominence has been given to the geography of America; and the principal Judian names of places, now in actual usc, have been inseried, so far as it has been possible to arrive at their meaning with approximate correctuess.

Valuable assistance has been derived, in the preparation of this Vocabulary, from lngram's edition of the Saxon Chronicle (London, 18:3), a Vocabalary of Geographical Etymology in Sulhwan's Dictionary of Derivations (Dubliu, 1s51), Charnock's Local Etymology (Loudon, 185!), Foster's Jlamal of Geographical I'ronnuciation and Etymology (London, 1060), Lippincott's Gazettecr of the World (Philadelphia, 185.5), Gibson's Etymological Gcomraphy (Edinburgh, 1510), and from varions other sources. Nany of the translations of the Indian names here giveu lave ben furnished, aud all of them examined, by Henry R . Schooleraft, LL. D., and the IIon. J. llammond Trumbull, whose high reputation and well-known aceuracy in whaterer relates to the Indian langunges, Itcrature, and history, are a sufficient graranty for the correctness of this portion of the Vocabulary. Information in regard to certuin uames of the sane class has also been obtained from the Nev. Ddward Ballard, sceretary of the Jiane Historical socicty.

\section*{1. EXPLANATORY INDEX OF PREFLXES, TERMINATIONS, AND FORMATIVE SYLLABLES.}

\section*{A.}
\(\hat{A}\) (ō) \(\mathbf{A a}\) (ia), Anch (äк) [O. Ger.]. Flowiug water; as, Torneat, Anchen [Aix-la-Chipelle].
\(\mathbf{A a r}, \mathbf{A r}\) (iir) (Celt.]. A watercourse; as, Aar, Arve,
Ald (ib), Anb (arb) [Per.]. Water, a river; ns, Doab (two rivers), Puinjaub (five rivers), Ab-i-kuren (river of Kar or Cyrus).
Ablib), Albins (ab'ing', Ab'bot [A-S.]. An abbot , as, Abtou, Aling lon, Albotsbury.
Alosid (ia biad' [Per.]. A eity, alode, or residence; ns, Akbirabath, Aurningabad (city of Aurungzelbe), Fyabarl benutitul city).
Abbas (äb'bïs') [Jer.]. Father ; as, Hubasabad (paternal abode).
Alnbe (ab'via') [Fr.]. Albot; as, subeville (abbot's town).
Aber (到解) [Celt.]. As abciture, estuary, or mouth of a river; as, Aberdeen (a town at the "montli" of the Dee).
Ac, Ak, Ais, Ock, Oke, \&c. [1ud.]. Eirth, laud,
Ac, fek (ik), or Ock (ŏk) [A-S.]. Iu onk; ns, Acton (oak-town), Ackwortl (oak-firm), Ockiley Acton (ank-tow
Ac (aik) [rr., from Lit. aque, water. Sec infra]. A suffix denoting the proximity of a stream; as, 1Hiberac.
Acqna (akk'kwii) [It.] [Pg. Agoas (íg go-bi), Sp, AGua (iifrwi), Fr. Alsue, Aignes (Jg), Lix (aks), Enix ( \(\overline{\text { L }}\) ), from Lit. nqua]. Water, Waturs; as, Acgutupendente (hinging water), A,foa Firia (cold water), foua Dulce (sweet, or fresb, water), digmes Jortes (deal or stagnant waters), Aix-la-Clapelle (waters of the chapel), Bordpaux (border of the wiaters).
Adel (ä'dẹl) [Ger.]. Noble; as, Aldetsberyg (noble's hill).
Adle: (äl1/ler) (Ger.]. Eagle; as, Allersberg (eagle's mountain).
Agoa, Agna, Aignes, six. Sce Acelo.
Ai, EI [Ar. \& Sip \(]\), The artcle the: \(-\Omega\) pretix to many names i iss, Alemutara (the imidfec), Aleazar the palace), El Doratlo (the "r galden" "country).
All, Alp [Cclt.] [Lat, rillurs], A hill or monntilin White with slow ; ins, flps.
Albo (al'ho), Lllaz (ill allus). White: ns, Albanella, Allumo. (Thac Tantiu form appears also in the Frencla names Aubin, - \(1 u b\) cterre, © © .)
 Village ; As, Mlace del Cano (village of the dor), flldea Yrilha (old village).
Aluhl (ä'liait) [Arab.]. God; as, Allahabad (elty of Allih).
A1p. Sce Alb.
Alt. Sec Old.

Alta (ail-t:ar), or Mtran (äl-tän') [Mongolian]. Gold; as, Altui or Altit yeen Oola (tbe golden monntain), Altamor (the goldent lak(').
 1ligh; as, Altamara (hirg wall), Altu Canfornia (upper California).

Paurpelinna, or Pamplona, cormption of Pompeiopolis, \(i_{\text {. }}\) e., the city of Pompey, its reputed peiopolis
founder.
sapua, "frizzlef," from the chormous frizzled Papua, "frizzled," from the
Heads of lhir of the matives.
Priania [Braz.], the sea.
I'arls [Lat. Lutetia P'arisiorum], nancel from its jnhabitants, the Parisii.
Paseagonla, nation of bread.
Passaic [lad.], valley
Passamarivodily [Ind.], great place for pollock. Passan [Lat. B'ataria, Buthuva C'astra], 1robably named from the Butuvi.
12nssumpsic [Ind.], muclu clear river.
Patagonia, so callod by Magellan, from Sp. patergom, a large, chmes foot, it name given by him to the inhalitants, ou account of the shipposed magnitude of their fect.
Pawentuck [iad.), clear river.
Pawcatuck [mal.], clear river.
Pawthekeriml., at the fithle falls.
Pemigewrosset [Ind.], crooked place of pines. Penniylvania, lomin's woods [lat, sylut, a wood , named after William Pem, wha settlet the country in 1681 .
Pemobscot, at the rock, rock lami ; applied origimally to a plaee near Castime- near to the river.
Derekop, i Slavonie name signitying a "cmat," applicable to the ditcla dughere, in rimote ateh, ucross the neck of land at the ens zance of the Crimea, for the seemrity of the place.
1Preicomal, it corruption of its latin name letricordium, from its anelent inlabitants, the lectricorii. Persin, probably flerived from the mame of one of its provinees, Pars, or l'aras.
Philndelinin [Gre], eity of brotherty love.

Philippine Islands, named after Philip II., of spain.
Pincenza [Lat. Plucentia], from placere, to please Damed from its delightful situation.
Piedmont, from lt. pie di monte, "foot of the monntain," so called from its situation.
Pisa, maned after its parent city, l'isa, in Elis, (ircece.
Piseataqua [Ind.], great deer river
Poitiers, city of the Pictoncs or I'ictart.
Polandl, flat land.
Polynesin [Gr.], " many islauds."
Pomerania [Sliv. P'more], upon the sea.
Porto Hico. See Port, I'art I.
Portugal, corrnption of Porths Cal, the harbor of Crel [Lat. C'ale], - the original name of the modern Oparto, afterward transferred to the kingdom it self.
Potomac [Ind.], place of the burning pinc, reserzo bling a council tire
Poughkecpsic [Ind.], shallow inlet, safe harbor for small boats
Pragne [Lat. Praga], enlarged by Libussa in 723, and by finm named Proka, from Bohem. prah, 2 threshold.

\section*{Prairic du Clifen [Fr.], dog prairic.}

Presque 1sle [ F 'r.], "peniusula."
Prussia, formerly Borussia, i. e., country of the Borussi. Aceording to others, a contraction of J'O Russia [slav. po, adjacent], i. c., next to Iussia. Pruth, from Slay. pred, river.

\section*{Q.}

Quelsce, an Algouquin term meaning " take care of the rock."
Quimmipiae [lud.], the surronnding country.
\&uinsigamond [Ind.], fishing-place for pickercl.

\section*{R.}

Taleichl, named in honor of Sir Tralter Talcigh. who planted a colony on the Roanoke nbout 1585. IEnpidasi, or liapifl Anit, said to have been Fappalamanock [Ind.], river of quick rising waters.
Theggio, from Lat. Rhegium, said to be from Gr pigyum, to break, becanse sieily was here severed from the main land by the force of the sea
Reilijavik [Tccl.], steam-town, named from the loot springs near it.
Rheins, capital of the Rimi, a people of Gaul meutioned by Cosar.
Rhorle Islnind, uaned from a fancied resemblance to the island of lihodes.
Itholles, commonly derived from Gr. fobos; a IfIone, from the Latim Rhodanus.
Hign, from an arm of the Danube called Rige or Lrio de La Plata [Sp.], river of silver, named by Diego Garcias in 15 :r, from the silver bronght him
TBio de Janeiro [Sp.], sitnated on an arm of the sea named Janciro, probably from its discovery by sea mamed Janciro, probably from its discovery by
Solis on the feant day of St. Januarims (Jan. 1). Thonnoke [Ind.], equivalent to peag, see-sheli or wampum.
1Hotterdam. Sce D.AM, Part I.
Thome, commonly derived from Gr. Auip \(\eta\), strength. 1torten, a corruption of its ancient name, Rotomegus, or Rothommm.
Reunaelia [Roumili], a Turkish corruption of ho manie, \(\mathrm{i}_{1} e_{4}\), country of the Lomans.

\section*{S.}

Sngndalioe [Yul.], ending-place, l. c., mouth of the Kembebed
Salnatar [Arab.], a desert.
Salem. Se Jurus.1.em.
Sulomica [Saloniki], abbreviation of Thessalonica. name given to the plate by Cassmader in honor of his wite, the slster of Alexandre the Great.
Samos, from Arabsama, to project, be prominent
Sumblusky [Ime.], cold spring
San Homiano sp.], Holy Sabbath.
San francisco [zip], St francis.
San duse [Spe], St. Joseph.

Sian Salvador [sp.], boly Savior.
Sinata Ifnrlhara [sp.], St. Barbara.
Eintar Cruz [And, Ioly Crose.
Sinma Né [Sp.], Soly juith.
Suntineo [spl.], for Rumt lawo, St. James.
Sante, Trom Chal. sogheom, The plaw river.
Saracoson, cormption of its Latim mame, Casarem dugusta.
saranue [lncl.], river that thows nader rock.
Suratoga [1nd.], place of the miraculous water ir a rock.
siaslantelsewnan [1ud.], swift current.

\title{
PBONOUNCING VOCABULARIES
}

\title{
MODERN GEOGRAPHICAL AND BIOGRAPHICAL NANES.
}

\author{
By J. THOMAS, M。D..
}
author of the system of geographichl proyunchator in lippincoty's gizetterd of tie world.

\section*{PREFATORY REMARKS.}

THE system adopted in the following Voealularics - now generally acknowledged to be the coly rational and satisfactory one for the prommcintion of geograplical and biographical names - is, to pronounce all names as nearly as possible as they are promounced by the educated people of the respective conntries to whicls they belong, excepting ouly those few wellknown forcign names which appear to lave nequired an establishod linglish pronunciation, sucl as \(I^{\prime}(6\) is, N'aples, Florence, V'enice, Milun, Munich, \&c.

It is admitted that eases not marequently oceur, in which it is impossible to convey with any great degree of precision the native pronunciation of other countries by means of English letters; but much is undoubtedly gained by such an approximation to the true sound as is within the reach of even the mere linglish scholar, since this would euable him more readily to understaml, and to be understood by, those who are familiar with names as apoken by the inhobitants of the respective countries to which such names belong.

But whatewer weight may be allowed to fitis last consideration, it may be safely affirmed that the system above referred to presents, on the whole, greater advantages and fewer difficulties than any other which ean be devised. Some, indeed, lave ndwoented the propriety of promouncing foreign aames as they nee written, giving to every letter its proper English sound. But such a method would obviously be attended with lnextricable diffieulties. What, for example, would, on this system, be the proper English pronunsintion of Seine? Should the ei be pronounced like long \(e\), as in the words seize, cciling, receive? or like long a, ns in rein, weight, inveigh? or like i long, as in height, sleight, de.? Should Scine, then, be pronounced sèn, sün, or sin? or should we sound the fimal \(e\), and make it \(s \bar{c} / n e\), sā'nc, or si'ne?
This one instance out of a multitude may serve to show the endless diversity and confusion into which such a system, or rather want of system, must necessarily lead. But this is not all. There are immomerable cascs in which it is very difficult, if not impossible, to pronounce foreign uames aceording to the English sound of the letters,-- for example, Czernigow, Mjelmar, Ljusne, Stegedin, \&c., - while there is no difieulty whatever in pronounciag them according to the native sound. A multitule of instances ulso occur, in which the prounuciation according to the sounds of our language, though not diffeult, is far less enphonious than the native pronunciatiou: Bacchiglione, Cagliari, Muho, and Saldanha, may serve as examples. Another ktrong argument against pronouncing forcign wames nccording to the English somel of the letters, is furnished by the fact that in a great number of instinces the same name is written wariously. In spanish, for example, \(x\) aud \(j\) (and \(g\) before \(e\) or \(i\) ), having exactly the same sound, are sometimes used indiscriminately, more especially in the spelling of proper names. 11 ence we have Talisco nad Jalisco, Fulapu nud Jalopa, Ximenes and Jimenes, the two spellings in each instance being pronounced in Spanisla exactly alike. The following name is written lin three difterent ways, Xixont, Jijona, and Gijoma, -all pronounced alike-he-ho'na. What comh be more perplexing, or more absurd, than to eall such n name sometimes aix-o'na ( \(x\) at the beginning of \(n\) word being pronounced as a in Endirglis), sometimes \(j \bar{j}\)-jo'na, or je-jo'ut, and sometimes \(\bar{g} \bar{t}-j o^{\prime} n a\), or \(\bar{g} e j o^{\prime} n a\) ?
In the preparation of these Vocabularies, the aim has been to give them pracfical utility rathev than great Lulluess or extent; aecordingly, those English and Ameriean hmmes (such as Frankiln, Johnson, Thomson, fe.) of which the prounnciation could searcely be mistaken, have generally been omitted, and the sprace thas grined has been filled with the more dificult names of other wuniries.

In giving the proumeiation of geographien and biorraphleal names, perhaps the most important, and certainly the most dificult, point of all, is to mark the accent correctly. In all the principal languages of Europe there is not one general rule for accent that ean be implicitly relied on. So great is the nncertuinty in this respect, that the most aceomplished native scholars of Italy, Spaiu, aud Germany are not infrequently at a loss low to aceentrate tho proper Dames of their respective countries, particularly if the mame in guestion happens to beloug to some obscure or remote district. Aud if it is so difficult to determine the correct accentuation of the names that ocenr In a single language, the intelligent reader may judge how arduous must be the task of ascertaining the proper aceentuation of the enfless varicty of names fombl in the different Luropean Ianguages. In fulfilling this task, iuformation las been sought from every accessible source, and espectally from educated untives, not only of the different combtries, but of different sections of the same country. With respect to the prounaciatione contained in the following Vo cabularies, it is believed that they will be foud to be as minutely exact as they could with propriety be given in a work desirgned elicaly for the use of the nere English seholar. Particular care lans been taken with what may be termed the four great langlatges of continental Emrope (viz., the French, (erman, Italian, and Spanisit), not merely to mark the accent correctly, but to represent, as far as possible, every importaut peenliarity of sound. It is, however, scarcely neecssary to observe, that po system of notation, based mpon the sounds of the linglislı tongue, can represeat exactly the pronunciation of words in other langrages. We have, for example, no sound precisely correspondiner to what is perlays the most common of all the French vowel somend that of a in Amiens, frago, sec., since it is less brotul than our a In fither or fur, and more open than the \(a\) in mallet or fitt. In this, aud many otlee anatogous cases, it has been deemed sufficient to make the nearest approximation to the foreign promuciation that the sounds of our language will euable us to do.
Witl regard to Lnglislı proper names, the diffeulty is not in representing, but in ascertaining, the true pronubciation. All those eanses which orerate in other languages to produce irregularity in necent or anomalies in the evands of letters, would seen to prevail in a pre-eminent degree iu regard to linglish proper names. Add to this that the same name is in many instances pronouneed diferently by difierent fimilies, so that it becomes necessary not only to aseertain the pronmelition generally adopted by the best speakers, but nlso to attempt the far more diffentt task of seareling out the peenliar preferences, not to say caprices, of families, and even of iudividuals.
The greatest pains have been taken by the nuthor of the following Vocabu. laries to render them as complete and correct as possible. The candid mul intelligent critic will, of eourse, make clue nllowance for such deficiemeies as are inherent in their claracter and uecessarily limited extent. Those who may feel a particular interest in such subjects are referect to the Introtuction of Lip* pineott's Gazetteer of the World, in which the principles in regard to the pronumeiation of foreign names ne much more fully developed and explined; or to the Giazettecr of the Worlu, recently published by Messers. A. Fullarton \& Co., of Jidinburgh, in the Appendix to which the most essential part of the Introduction above allmled to has been embodied, with a frank and bonorable acknowledgment of the sonree from which it was taken.
The nuthor em not conchule without neknowledrying the ralmable nssistance which he has received lrom Mr. William A. Whecler, who las for a number of years studied the suliject of orthoïpy, in its various brauches, with great dilirence and success.

\section*{ELEMENTS OF PRONUNCLATION}

UF TIE PRINGIPAY MODERN JANGUAQES OF CONTISISTAL EUROPE.

\section*{VOW゙LLS.}
E. In the Ianguages of Continental Lurope, a never laas a sound like that in the English words fate or name, but is usually like the a in far or father, often approximating that in fat. In llungarian it is sometimes like o im not.
2. \(E\) generally has a sound similar to \(a\) in fute, or else to e in met. In Freuch it is often silent. In Swedish, \(e\), when long, has a sound resembling that of short \(i\), but more prolonget. Thus, Carlén might be pronounced Rar- \(\mathrm{Mn}^{\prime}\). Wheu short, it is like c ju met.
3. I usually sounds as in marinc; that is, like long e in Englisb. It is sometimes like our short \(i\), as iu pin. It is important to observe that \(i\) final in Freuch, Italiar, and Spanish, has the full, clear sound of ce in sec; it shonld therefore not be allowed to fall into \(f\), as it is apt to do in English or Anglicized words.
4. O has for the most part nearly the same somm as in Enclish. Sometimes it is long, as in no, but offen it has a sound intermediate between that of our o in no and that in not. (Sce Observation V'T. on 1). IGa3.) Iu Russian, o, when not accented, is very short, almost liko a in futher, or intermediate betweeu this and that in fot. In Swedish and Norwegion, at the end of a syliable, it is sounded like our oo.
5. \(U\) iu most laugunges is promonaced like the linglish oo. In freneh (and lu Dutch when it euds a syllable) it may be said to combine the sounds of our oo and long e. If the speaker, after placing lis lips in the position for pronounciug oo, endeavors, without moving his lips, to utter the sonnd of ee, that of the Frenela \(u\) will be produced.
6. Yis usually like \(i\), that ls, like our \(e\). In Danish, Norwegian, and Swedish it sounds like the Freneh \(u\) or German ì. In I'olish it resembles our short \(i\), as in pin. Iu Dutch it is like on long \(i\). It may be observed that, necording to the motern Duteh orthography, \(i j\) is substituted for \(y\). Thus, the old spelliag Oreryssel is replaced by Overijssel, Bitherdyla by Bitilerdijk, \&e.

\section*{1) Hehthones}
7. Aa in Danish usually sounds nearly tike our \(a\) in fall, sometimes approaching olong. \(f(h)\) in swedislı sounts like long a in Einglish.
8. Ae, or \(a\), is nsually pronounced like a in fate, or \(e\) in met. In Dutela and Flemish ae sounds like a in far. In tho modern Intch orthorraphy ae is replaced by aa. Thus, the name formerly written Ifacrlens is how Haarlem, Mates is changed iuto Mats, \&c.
9. Ai and ay are usunlly mroper diphthongs, belug compounded of the sound of \(a\) as in fur and \(i\) as in \(f i g\), thus nearly corresponding in sound to our longr \(i\). In French aud Modern Greek they are pronouncel nearly Like ay in the English word day; that is to say, like a fn fate.
10. Au has generally the sound of ow in now. In Irenely au and eat lave the sound of long o. (See IVemark 11I. p. 1683.)
11. Ei and cy are generally proper diphthongs, uniting the sounds of \(a\) in fate aud e in one, being similar to ay in day when this word is pronounced very full. In German they are like our long \(i\); in French, nearly like our \(e\) in met, or \(a\) in fute.
12. Liu in Frenclu and Dutch has a sound uearly similar to \(u\) in the English word fiur, but somewhat more prolonged. This sound is intermediate between that of the English short and that of the German ö. (see It.) Some orthoepists represent the sound of the Firench eu by the German \(\delta\); but this latter sound is perhaps even more difficult for the English pupil than that which it is intended to explain. It has, therefore, been deemed preferable, in the present work, to represent the French en by an Juglish sound, which, in tho opinion of some aecomplished French teachers, is searer to it than the German, and which has the additional recommentation of being a sound with which the linglish dearner is abready familiar. la German eu and äu have the sound of \(o i\) in Euglish.
13. Ie at the end of a word is always promounced in French like \(e\) in the English word me. In German it is frequently so pronounced. In the middle of a word, \(i e\), both iu Dutch and German, always sounds like our loug e.
14. Oe, or \(\ddot{o}\), oceurs in several Europem lagruages. lu Dauish, however, instead of two dots being placed over the o, a mark is drawn obliquely through it ( \(\phi\) ). 'fhe somd is mulike any thing we hare in Linglish, but is nearest to that of \(u\) in fur, or \(e\) in her. If, while the lips are retained iu the position proper for forming a long, the speaker thics to utter the sound of e in met (or ain fote), he will produce the sound of \(\ddot{0}\). AD This sound, as well as that of the Freneh \(u\), should, if possible, be learued from an oral instructor, In Dutch, ve sounds like our oo.
15. Oi in French is usually sounded like seii: moi is pronounced muii ; roi, ruä: \&e. Oi ju the termmation of "ertan tuses of the French serbs, as well as in some adjectives, was formerly used instead of ai, nud was prononneed like thas diphthong. Now, however, oi in such words is almost universally replaced by ai. Thus, instead of purlois or parloit (the imperfect tense of parler, to speak), the Trench now write parlais and partait, and instead of Frengeis, Françoise (French), they write Français and Franfaise.
16. Ou in French and in Modern Greek sounds Jike our oo; in Duteh and Norwegian, like ow In the English word now, or like ou iu housc. In Portugrese it is pronounced nearly like lons o.
17. Ve, or it, has the sound of tite French \(u\). (Sce 5., No liespecting the double voucels, see Observation V'. P. 1683

\section*{CONSONANTS.}

The consonants in the lauguages of Coutinental Europe we, for the most part, similar iu sound to the same lefters iu Englislı. Who following exentions may be mentioned:-
18. \(L\) at the end of a word in German is pronounced like \(p\). Between two rowels in spanish its sound is somewhat similar to \(r\), with which it is cften interelanged; as, Cordoba, Cordoia, dc. This sound of \(b\) ts formed by bringing the lips loosely or feebly iuto contact.
19. C before e and i in Italian is pronouned like ch in the English wrord chill; in the same position in Spauish it sounds Jike the spanish 2 , or like our th in thin (exeept in the Catalan dialeet, where it has the sound of s). In German, \(\varepsilon\) before \(e, i\), aud \(y\) is pronounced like the German \(z\), or like ts in linglish. In lolibh it has the same sound, even at the end of a word; thus, Pirpice is pronounced pripets.
20. I) at the end of a word in German and Dutels Is prowaunced like t. In spanislı and lanish, between two rowels or at the eud of a word, it has a sound similar to th in this.
21. In all the liuropean languages \(g\) is hard before \(a\), \(o\), and \(u\); in German, Danish, Norwecgian, and lolibh, it is bard in every situation, though it somstimes has a guttural sound. IBefore \(e\) and \(i\) (or \(y\) ), in French, Portuguese, spauish, and swedish, it is like the \(j\) of these languages. In the same position in Italian it sounds like our \(j\), or soft \(g\). In lutelt it is nlways pronouneed like t stromely aspirated. C'u before \(e\) and \(i\), in French, Iortuguese, ant Spanish, sounds like \(g\) haril.
22. \(J\) iu Freueh, Italian, Spanish, andlortuguese, is elther never prouounced at all, or else is sonuded so slightly that an binglish ear can seareely perceive it. In the other languages of burope it lias the same sound as in English.
23. Jiu Ltalian, German, Iolish, Swedish, Norwegian, Danish, aud Duteh, is pronounced like our \(y\). la lirench and l'ortuguese it has the sound of \(z h\), or \(s\) in the Euclish word pleasure. In spauish it is equivalent to \(x^{\circ}\), beiug eimilar iu sound to astrongly aspirated \(h\).
21. Often ut the end of a syllable, in Frenel and Porturuese, \(m\) and \(n\) are said to have a masal sound ; but, more correctly epeaking, dropping their own proper character, they inpart masality to the preceling vowels, which are then sounded througla the nose, for example, ban in Jrench approximates in sound that indicated by beng in Jinglish. Alem, or alen, in Portuguese is pronouuced amost ii léng'. In pronomeing the nasal vowels in these languages, eare should be used not to press the brek part of the tongue ngaiast the palate, as is done in protucing the sound of the English ng. ln lrench, o before \(n\) nasal has nearly the souml of our o in note, but is somewhet shorter. That is to say, if the linglish word no be pronounced quickly, with the rowel rendered nasal, the sound groduced will correspond almost exactly to that of the Irench non. Some distinguished phonolorists, however, are of the opinion that the sound of the French a in such eases is nearer to that of our o in nor. It is undoubtedly a nice and diflicult question ; but it is eertain that for practicut purposes, it is much safer to direet the pupil to pronounce the o with \(n\) nasal, like 0 in no or in only, rather than like \(o\) in nor, since in the latter ease he is iu danger of confounling the sounds of the french on and an - \(a\) very prevalent fault with linglish and American epeakers. It should be rememberel that a before \(u\) nasal in l'rench is sounded very broad, nearly like our o fa not. Jhlu Ltaliau before g usually preserves its clear sound; lence Marengo is pronounced almost mü-renn'go ; in all or nearly all the other languages, \(n\) in such cases approximates the sound of the English \(n\) in link.
25. \(\overline{5}\) in Spanish (like \(g n\) in French and litian, and \(n h\) in l'ortuguese) Inas a sound combining that of \(n\) and \(y\) consonant. Mino and slinho are pronounecd alike - meen'yo.
20. Qu before e and \(i\) in l'ortuguese and Spauish. and before every vowel in Frenelh, has the sound of \(k\). In most other languages it is esseutially the same as m Enclish.
27. \(f\) in most kuropean langurges is trilled more strongly than in English, particularly at the end of a word or syllable. In pronouncing it, the tip of the tongue is made to approach very near to the roots of the upper tecth.
28. S in many European tongues, when between two vowels, is very son, having the sound of our z, or one very near it. In German it is usually pro nounced soft at the beginning of a word, In liungarian it sounds like our \(s h_{\text {, }}\) or the German seh.
29. T' in several European tongues has a sound somewhat more dental than in Euglish. This is especially obscrvable in Spanish, in which lamguare it is pronounced by putting the tip of the tongue agaiust the upper tecth.
30. IF in German and some other Janguages is nearly similar to our \(t\). It may be described as a 2 uttered with the lips aloue, without the aid of the teeth.
31. X iu spauish generally sounds like a strougly aspirated \(h\). (Sec 23.) Iu Portuguese it is pronouneca like our sh.
32. \(Z\) in German and Swedish has the sound of \(t s\); in 1 talian, \(z\) usually sounds like da, â Like ts. In Spanish it is promonneet like the Englist th in thin,

Combined Coxsonints.
33. Ch in Spanish has the same sotnd as in the English word chill (exeept in the dialect of Catalouia, where it sounds like \(k\) ). In Italian, it is pronounced like \(k ;\) in German, Polish, and some other lagruages, it has a guttural sound, somewhat similar to a strongly aspirated \(h\). This sound must be learued from an oral iustructor. Iu Frenels (except iu the ense of some words derived from the Creek), and iu Portuguese, ch has the sound of our sh.
34. Cs in Hungarian sonuds like ch in the Eughish word church.
35. C \(\sim\) in Polish soutuds like our ch; in II ungarian, like \(t s\).
36. \(D y\) in llungarian blends the sounds of \(d\) and consonant \(y\), and henee approximates the sound of our \(j\). The same combination oceurs ju some Ligglish words, as in soldier, verelure, se. (See 4.)
37. Gh in Itatiaus is tike \(g h\) in the Linglish word ghost, or \(g\) in game.
38. Glin Italian, when followed by \(i\), has the same sound as \(7 h\) in Portuguese, or \(l l\) in Spanish. Before \(a, o\) or \(u\), tile \(i\) following \(g l\) is sileut. (Sce 41 .)
39. \(G n\) in Freuch and Italian (like \(\tilde{n}\) In Spanish) combines the sounds of \(n\) and consonant \(y\). (Sce 25.)
40. Gy in llumgarian blends the souuds of \(d\) and \(y\) cousonat. Nugyar is prouounced mǔd'yör'. (Sce 30.)
41. \(L h\) in Portuguese, aud \(l l\) in Spanith, combine the sounts of \(l\) aud \(y\) cousonant. For example, velho is prououneed vel'yo ; villa, veel'yii ; lleno, Jy:ño. Iy in Ilungarian has also the sound of \(l l\) in Spanish. \(I l\) iu French, when preceded by \(i\), was formerly, in ecrtain words, sounded like the Spanish \(u\); but according to the modern popular pronumeintion, all sombl of the \(l\) in such words ls dropped. Aurillac, formerly \(\bar{o}^{\prime} \mathrm{r}^{\prime} \mathrm{u}^{\prime} \mathrm{y}^{\prime a} \mathrm{k}\) ', is now geuerally sounded \(\bar{o}^{\prime}\) re'yük'; Bouillon, formerly bool'yón', is now boo'yón', \&c. It may be obscrved, however, that public speakers, and others who aim to be very correct in their prounaciation, still frequeutly retain the sound of the \(l\).
42. Nh in Portuguese is pronouned like the Spanislt \(\bar{n}\). (See 25 and 39.) Ny in IIungmian has the same sound.
43. Sc in Italiau, before \(e\) and \(i\), sounds like the Higlish sh. Suio is pronoubeed shec'o, Sciortino, slior-tec'uo, \&c.
44. \(S z\) in lluagarian is sounded like sharp \(s\), or \(s s\); but \(a s\) is like onr \(\begin{gathered} \\ \text { in }\end{gathered}\) In Polish, sz sounds tike our sh.
45. Sch in German is prouounced like shin Eaglish; in Italian, before e and i, It sounds like 5\% in Loglish, and in Dutel, before all the vowels, its sound is similar, but Ifarsher aud more guttural.
46. Th in all the modern lauguages of Continental Lurope except Greck (in which the elaracter \& has the same eound as our \(t h\) ), is pronounced liko simple \(t\), or like th in the Euglish word thyme.
47. Ts in llungarian is like \(c s\) in the same language; that is, like our \(c h\) in church.
48. Ty in IIungarlan bleuds the sounds of \(t\) and consonant \(y\); it appronches in sound our ch. A similar combination of \(t\) with the sound of consonant \(y\) takes place in the English words creature, righteous, virhue.

\section*{ACCENT.}
49. By accent is usually meant, iu linglish, that particular impulse or stress of the voice which, iu pronuaciation, is placed upon ecrtain sylhables of a word : for example, on the last syllable in confer and retain, ou the second in America, and on the first and last in evermore. Many words in Englisln tlike the one last cited) hare two aceents ; but one is always predominant, and is termed the primary aecent : the other is ealled the secondary accent.
Something analogous to English accentuation is found iu wearly all fauguages. In the 'Teutonic tongues, especially, the accent is essentially the same as in English, a large number of the polysyllabic words having both the primary and secondary accent, as Son'ders-heu'sen, Zoll've-rein'. It may be observed, however, that in woue of the other laggages, not even in the Teufonic, is the stress of voice thrown so exclusively on a single syllable as it mostly is in Luglish; sud, as a uatural consequence, the unaceented syllables are almost Invariably pronounced more distinctly than by us. This is an importaut point to be borne in mind by those who wisls to speak foreign words or unmes correctly.
It is very difficult, if not impossible, to give any general dules, that would be of much practical utility, for placing the accent on forcign words of names. Amoug what may be termed the prineipal Luropean lauguages (viz., Eng lish, French, German, Italian, Fussian, and Spanish), there is scarecly one general rule for aeceut to which there are not a multitude of exeeptions. Those of most general application are perlaps the following : In Spanish and rortuguese, words ending in a vowel usually lave the aceent ou the penultima; those ending iu a consount are generally acented on the last syllable: yet even to these there are numerous exceptions; c. \&., Alalu, Alccintara, Cördora, Gruiniscoa, Mirida; Almodözar, Andajar, Citceres, Cudiz, aud many others.
50. In Spanish, the differeuce between acecuted and maceented syllables, thouch suffisiently obvious to a native, is somethes searecly perceptible to a foreigner:
51. In Il ungarian, there is no accent, according to our use of this word; but the syllables are distinguished from each other by quantity, being, like the lation, divided into long and short. But as quantity in Latin and Greek is converted info accent by the usage of English pronunciation, so, in giving IIungarian names in the following vocabularies, the aceent is placed necording to
quantity whenever this could be satisfactorily ascertanced; e. ge, Csongriil,

52. The Freuch Iarguage also has no accent, in the sense iu which we employ the term. The marks ealled accents that are placed over the different vowels, serve only to indicate some particular sound of these letters, and not that pecaliar impulse of the roice which characterizes an necented syllable in the English and most other Europeau toagucs. Thus, the acecnt over the \(e\) in parte serves to show that this vowel lins its first French sound, and at the same time distinguisles it from puele, another form of the same verb, in which the \(e\) is mote. The circumflex imparts to the rowels over which it is placed a lourger and deeper sound than ordinary ; c. ģ.; in hutte, tempète, gite, and apôtre. It is commoaly said that the French pronounce all the sylables of a word with an equal stress of roice, but that they seem to an English ear to aceentuate the Jast, beenuse in our language the universal tendeney is to throw the accent toward the begioning of the word. Others maintain that in pronouncing words of a number of syllables, the voice of a native Frenel speaker almost invariably rises and dwells ou the last, and that this peculiar teminal intomation is very analogous, and nearly equivalent, to our accent. Be this as it may, the fact that the Lnglish who have Jearoed the pronunciation of names from heariag them spoken by the French themselves, almost iuvariably throw the aecent on the final syllable, furnishes, it woth seem, sulliejeut ground for establishing a general rule on this subject. Accordingly, the prineipal aceent has been placed on the last syllable of French names : at the same time it has been thought proper to mark the others with secondary neceuts, in order to prevent them from being pronouneed too slightly or indistinetly, as is usually the ease with tuaceented syllables in binglish. The pronunciation of Orlectus, for example, has been thus giveu-or'líux.

\section*{OBSERVATIONS.}
I. I, in French and some other languages, often has a sound that is some\(t i m e s\) said to be between our ee and short i. It is, however, properly the pure sound of \(e\) as in me or ee as in sec, pronounced short. This sonnd is represented by e.
11. It may be observed that \(\bar{a}\), as in the English word doy, when uttered fully and distiuctly, is a true diphthong, consistiug of a sound uearly like that of \(e\) in there or met (but less open), prefixed to (or combined with) that of short \(i\). In pronouncing foreign uames, ī (used to represent long \(e\) iu Germsn, Italiau, \&e.) should never have this diphthongal sound; is other words, the terminal element, resembing short \(i\), should be earefully exeluded.
111. In marking the pronunciation of foreign uames, except where a full acceut falls upon the vowel, we have usually preferred to use \(\overline{4}\), e (or \(\hat{\iota}\) ), and \(t\), rather than \(\bar{a}, \vec{c}, \overrightarrow{0}\), as the speaker would be iu danger of prolongiug the sounds of the latter too mueli. In fle pronunciation, however, of Freuch uames containing the improper diphthong aut, 0 , marked Jong (o), is always made use of, because the sound jn Freuch is actually long in quantity.
1V. \(E\) (not marked with an aceent) in Frencl is usually silent; and it is oceasionally so in Danish aud German.
V. A double letter, in foreign words, is generally to be sounded more distinctly and fully thau a single letter of the same kind. This remark applies to nearly all the double rowels in foreign languages (execpt aa in Dauish and Norweginn, already explained under the diphthougs, see z, p. 1632) ; ce and oo iu Dutch and German, \(i i\) and \(u\) in Dimish and Nonwerian, being simply equivalent to the single vowel prolonged. Ss, exeept in llungariau (see 2s), has the sound of sharp \(s\), as in our words so, house, \&c. S's is sometimes used at the beginuing of a word or name by the Germans, in order to indieate more surely the sharp sound of \(s\); more especially words from the Oricutal languages are written in this manner: sinee a singles in German at the beginning of a word would be liable to be sounded like oll \(\approx\). (See 2s.)
VI. It will be observed that in the following vocabularies, of followed by a single consonant in the proumuciation of foreign names is usunily without any diacritical mark (c. 氏ֻ., Heilbrom, hīl-bron', l'ignerol, pèu'y'c-rol'). lu such casus the Luglish scholar will, of course, pronounce it like short o, as in folly, this beiug perhaps the neurest Luglislu approximation to the true sound; yet, propcrly speaking, the sound approteles that of o in nor, and is, in fact, intermediate between o in not and \(o\) in note. This at least is true of the Freuch, German, and italian.* The reader should be particularly on his guard, in sueh cases, not to give the o a flat sound, as is too ofleu done, so that not is pronomaced almost as if it were written nüt. This, in speaking Dinclish, is a very bal finlt, but is still more oljectionable iu pronouncing foreign words.

V'II. A system of notation intended to represent the sombls of many different lamguages, must, from the necessity of the ease, be somewhat complex and diflicult. Heuce, it is particularly important not to cmbarass the reater with neetless signs or nuncecssary distinetions. In respelling for proumeiation, therefore, marks on the vowels have generally been dispensed with, when the sonnds of the letters couth not casily be mistaker. Tlus, for example, chan'pee gives the pronumeiation of the ltalim name Ciarpi no less perfectly, and more sinply, than chan \(\mathrm{p}^{\prime} \overline{\mathrm{e}}\); for the same renson far-sis-tin' \({ }^{\prime}\), as the pronunciation of Farsistan, is preferable to far-sis-tian. It may be observed in regard to the example last cited, that the diacritical sign on the second \(a\) ls necessary; otherwise the fiual syllable might be prouounced stum. it lias aecordingly been retained. For
*In Itatlan thls sound of o ofen differs very slightly from that huleated by \(\overline{\text { a }}\) (o Interuncdiate); thens, Giotlo might he pronounced jot'to or lut'to.
similar rensons, in gividg the pronuciation of rreuch names, the rowel ending a syllable is nsually ummarked, except where the diacritienl sign is absolutely required to distimgnish the sould; as, (7umtilly, shơs-tc'ye'; Chamouni, shä'moone'. A single \(e\) iu these nannes is priferred to ee, because the latter would be apt to be prolouged too much. In all cases, however, where it was thought hat the omissiou of the diacritical sign might give rise to doubt or error, such
sigu las been adiled, imasmueh ns praetical utility las been deemed to be far more important than the mere slow of consistency. For example, es, even when occurring under a full (or primary) nceent, has becu markent short (as in Foldes, val-des'), because, in accordauce with the usual Latin pronum, is so apt to be somuled loug; thus, we very geuerally hear Cervantes pronounced ser-van'tèz, zlthougly this is not a Latin pauce.

\title{
EXPLANATION OF ABBREVLATIONS AND SIGNS
}

EMILOYED 1N THE VOCABULARIES OF MODERS GEOGRAPIHCAL AND HOGRAPIICAL SIAJES.
\begin{tabular}{|c|c|c|c|c|c|}

\hline
\end{tabular}

R, \(\mathrm{e}, \mathrm{h}, \mathrm{Q}\), marked with this fign [A] underncath, have an obscure sound similar to that of short \(u\), but are usually cousiderably shorter, aud, indeed, sometimes are almost mute: thas, Grittan might be pronouncel grat/tan or

\(\bar{\hbar}, \hat{c}, \hat{\Delta}\) are similar in sout to \(\bar{i}, \bar{c}, \bar{o}\), but are not to be pronouneed so loug.
it is employed to denote the long sound of ii.
ö has a sound similar to cin her (sce dit); it may be Anglicized by e.
Li is like the Freuch \(u\) (sec \(5^{*}\) ), whict it is cmployed in pronunciatiou to represent ; it may be Auglicized by the Enarplish u.
cr, small capital, is intended to represcht the sound of the Frenchen (see 12*); it shouh be prononnecul nearly like a in the Loglish word fur.
D, small capital, is used to dewote the sound of 4 ln Spanish, often nearly approximating that of \(r\). (see \(14, *\) )
D, small capital, is intuded to repreaent a sound simblar to the in this. (See 20.*)
if nd k , small eapitals, Indicato the sound of the German ch, or one similar to it. (Sce 33.*)
H, small capital, has a sound somewhat similar to the preceding, but more resembling a strongly arpirated \(h\).
I ( \(\{\) liquid) is to be pronounced like lli in million; it bleads the sounds of \(l\) and \(y\) cousonatut. (see tl.*)

M and N, small capitals, are used to represent the nasal sound in lreneh, being similar in sound to ng . (See 2t.")
In is prowounced like \(n i\) in minion; it bleuds the sounds of \(n\) and \(y\) consonme. (Sce 25 and 4!.*)
1, small capital, has nearly the sound of or in terror, but strouger. (See 2\%.*) \(\dot{s}\) is usch to iudicate that the sound of the \(s\) is very soft, nearly resembling our z. Th the mildle of \(n\) word it should be pronounced like a soft \(z\).
when a fouud similar to our \(r\). (Sce \(30 . *\) ) The " over the w is intended to point out its nlliance to our \(r\).
\(y\) and ey at the end of nu nuaccented :yllable sound like \(i\) la pin. au and ou have the sound of \(a\) in full.
ce iudleates the clear sound of short \(i\) before \(r\), as In the linglish worls spirit, miracte, sc.
out is to be pronounced like ore la core, end on like ou in house. In respelling for promuciation, ox has been replaced by ou, wherever the former combination would be liable to be pronounced like long o, as iu groze, toic, se.
ss is sometimes used to mark the sharp sound of \(s\) where a singles would be liable to be pronounced like z ; c. g., Mons, músiss, not mús.s.
\& sonmals like z.
th is to be pronounced like \(t h\) in this.
' is sometimes used to denote the breathing in l'renth mames in which the \(h\) is sciel to be aspirated. It is less strongly pronounced than \(h\) in linghish.
ef The primary or priucipal necent in any name is marked thus ('); the secondary or subordinate aecent thus ('); ns, Г'as'sn-ma-quod'ly.
eve The sounls of the marked letters are explainct la the Vocabulary at the botlom of cach page.

\section*{ODSERTATIONS}

\section*{NECESSARY TO RF BORNJ IN MND PY TIOSE THO MAKE CSE OF TIIE THO FOLLOWLNG VOCABLLARIES.}
1. Epery letter or combination of letters accurring in the pronunciation of n word or name, is to be pronounced with its proper Euglish sound ; c. G., ch is to be sounded as in chill, g/ as in get, se. From not attenting to this simple and obrious rule, many persons fail ta pronounce numes correctiy, even white they hare the promuciotion clearly and accuratdy marked bejure their eycs. Thus, che-w'wa is given as the pronunciation of Chihuahua: many, however, with this prommeiation before them, have ealled it shewa/wis, not cousiderlag that if such had been the true sound, it would have been so respelt. Chapala is, in like manner, most improperly prononncal shâ-pïlia. All persons desirous of spenking correctly should be careful to gaard against this most vicious pronunciation.
2. In the pronunciation of foreign names, particnlar care shonld be taken not to allow at to fall into the thind or brond sonnd of this vowel - an error to which American and Euglish speakers are very prone; it would be far better, generally speaking, to pronounce it like a in fut. It has already been observed, however, that \(a\) before \(n\) nasal in French is broad, almost like o in not. Accorlingly, in the two following Vocabularics, an aasal is represented by ux.
3. In pronounciug French woris containing on nasal, the speaker should be eareful not to give o its short foumd, since this is not only incorrect, but is liable to confond the word with others entirely different in spelling and signifieation. By this faulty pronnnciation, bon (good) is sounded like ban (ban or exile) ; lon should be pronounced büs-almost büng. Toulon shoukd either be entirely Auglicized (as too'thn), or else prononneed too'lis' - almost too'long'. For the same rersous, cu, ju names uot Anglicized, should have its dis-
tiact sound, like our \(u\) in fur, mind not be conformided with the French ou or \(u\). There is no suffeicot reason why the lirench names Drcux (dreh) and Droux (droo), Leure (11:16) and Lure (liik), sloould not be distingulshed from each other in proutuciution, ns well as our words grum and groom, cur and cure.
4. In the pronumciation of forcign names, the speaker should be eareful to gronounce alt rowels, rhether in an accentel or unaccented sylluble, distinctly, if they are not expressly marted as ouscurc.
5. When \(h\) (not small capital) occurs at the end of a syltable in the pronuncintion of a name, it is not generally to be sounded. It is often used, for example, after te (representing the sound of the French cu), that the learner may not grive this rowel the sound of \(u\) in cubc or rule, as otherwise le would be apt to do.
It may be remarked, however, that, in a very few instances, \(h\), at the end of Presian or Arabic uames, is distinctly pronounced in those languages, nud has therefore been repeated in the proouncintion; e. G., Satlir shnk, nä'dir shath.
6. It is to be observed that the number of syllables in the names of the two following Vocabularies is to be determined by the number of acecnts or hyphens, or of both together; thus dnyesster, the Rinssian prounciation of Duicater, must be pronouncel, not dri-čs'ter, but dnyes'trr, the ny beiug employed to indieate the sound of the Spanish \(n\), that is, the sound of ni in minion.
7. The abbreviation \(S_{y n}\). (Synonym, or synonymous sith) indicates thst the name to which it is affixed is either simply another spelling of the nams referred to, or that it designates the same person or place.

\section*{PREFACE。}

Tine design of this work of biographical reference is to furnish rapid answers to the questions most frequently asked concerning any one of the distinguished persons herein mentioned; namely, 1. What is the correet spelling and pronumeiation of his name? 2. What was he? 3. Where did he live? 4. When did he live?
\({ }^{6}\) Much time and labor have been devoted in selecting from the vast array of names recorded in biographical works, such as are the most prominent, or for some reason worthy to stand in a list of about ten thousand selected names. That many, even of our own country, as deserving as those hercin enrolled, have been omitted, would not be surprising; and the same thing might be said about any biographical work now extant; and the assertion would especially hold true in respect to individuals still living. In most cases the compiler of a work like the present one must make his selection from the books, and form his judgment from what is there recorded, taking those names which, in his opinion, will be most frequently looked for.

Much pains have been taken to give the most approved spelling. It is hoped the work will be found reasonably aceurate in this respect. The middle name has been written in full, whenever it could be ascertained, instead of being indicated ly an initial merely. In regard to many names more than one way of spelling is common. In such cases, the intention of the compiler has been to give the way preferred by the best anthoritics (as, Menendez (thus written by himself) instead of Melendez, Gen. Nathanael Greene instead of Gen. Nathaniel Greenc, Sir IIumphry Davy instead of Sir IIumphrey Davy, Fénelon instcad of Fénélon), or where other reasons were equal, to choose the form most generally accepted.

With respect to Oriental and Russian names, it is often difticult to decide whether the French form, the German, or the English should be preferred, e. g. Abou-Behr (French), Abu-Bckr (German), or Aboo-Behr (English); Schouvaloff, Schuwalow, or Shoovaloff.

The principles laid down for the pronmenation, and the marks employed, are explainct in pages 1682-168t inclusive. The pronunciation of the names which appeared in the original Biographical Table, and which reappear in the following pages, is retained, for the most part, as formerly given; and the same diacritical marks and general plan have been kept in pronounciag the additional names included in the present Dictionary. It could hardly be supposed that any two orthoëpists would be at one on all questions as to the pronunciation of proper names, and especially those of a forcign language. But most of the differences would relate to points of minor importance. A system (as that of the Geographical and Biographical Tables) elaborated by a phonologist of so high repute and large experience as Dr. Thomas will be aecepted with full confidenee as to its correctness and practical use.

The arrangement of the names is the simplest possible and the easest for reference--being alphabctical. Where two or more members of a family are mentioncd, the relationship is stated in italics immediately after the Christian name (as Son, Futher, etc., as the ease may be). An assumed name, a sobriquet, or an original name not so well known, is generally printed in italics. The italic words in brackets indicate something noteworthy with which the person has had to do, as a book, a painting, an invention, a discovery, a doctrine, or the like. In many instanees the word or two thens inclosed serve to identify the person clearly.

Great care has heen excreised to have the dates as correct as may be, and for this purpose only those authorities deemed the most trustworthy have been followed.

It is believed that the following pages, registering, concisely, only such biographieal matter as is of the most importanee to know, will supply a need often felt by every carnest reader, and increase the usefulness of the whole work as a Dictionay for the Home and the School.
L. J. C.

Doston IIfglands, Mass., Februdury, 1879.

\section*{A PRONOUNCING BIOGRAPHICAL＇DICTIONARY．}

EXPLANATIONS．

\title{
COMMON ENGLISH CHRISTIAN NAMES，
}

WITH

\author{
THEIR DERIVATION，SIGNIFICATION，AN゙1）DIMLNUTIVES，OI N゙CKNAMES，AN゙D IHEIR EQUIVA－ LEN＇TS IN SEV゙ERAL OTHER LAN゙GUAGES．
}

\section*{INTRODUCTORY REMARKS．}

\begin{abstract}
Ture design of the following Vocabulary is，in part，to supplement that of the Biographical Dictionary．In addition，therefore，to the Bhglish Christian Names which it embraces，and to their correspobding Latin forms，which are also given，the priqeipal modero equiralents in actual popular use，or which lave become familiarly known through literary associations，or which are，for other reasons，peculiarly important，lave been incinded as far as practicable．
From Christian names are formed，by contraction or corruption，many sobri－ quete of nicknames，and many diminutives．Some of tlese aequire special interest from their use in the formation of surnames；others are confined to particular localities；others，again，are merely colloquial or fanciml．In this Vocabulary，only those dimiuntives and nickames are given which are well established or are etymologically important．
With one or two exceptions only，no notice is taken of surnames used as Cliristian names；such，for example，as Addison，Harzey，Jeferson， Sidney，dic．
Careful attention las been bestowed upon the pronumeintion．In names from the modern languages other than the Eaglish，the same system of notation is
\end{abstract}

Used as in the case of the Modern Geographical and Liograplical Nomes． See Pp． 1682 to 1684.
In selecting the names，and in tracing their derivation and signification，use has chiefly been made of the following works：1．Hleyse＇s＂Allgemeiaes ver－ deutseheades und erkliireades Fremdwïrterbnel．Zwïlfte Ausgabe．Neu ver－ bessert und bereichert heransgegeben von Dr．C．A．F＇．Jlahn＇（11anoover，1859）． 2．Ingram＇s edition of the＂Saxon Clironicle＂（London，1823）．3．Camden＇s ＂ Remains concerning liritain＂（I．ondon，1G：J）．4．Verstecau＇s＂Restitntion of Deeayed Intelligence in Antiquities＂（London，1631）．5．Joaes＇s＂Proper Names of the Old Testament Scriptures，lixpounded and Illustrated＂（London， 1830）．G．Thobinson＇s＂Lexicon of the New Testameat＂（New York，1850）． 2．Smith＇s＂Dictionary of the Bible＂（London，1863）．8．Nichols＇s＂What＇s in a Name＂（London，1809）．0．Lower＂s＂「atronymica Britamnica＂（London， 1860）．10．Virious Iegisters，Directories，de．1I．Miss Ionge＇s＂1listory of Christian Names＂（London，18（13），an claborate and very able treatise，which contains much information of great value not elsewhere accessible，aud which has been of more serviec than any ofber single work．

Zonam perduld. [Lat.] Mc has lost his pursm.
Zonars solverc. [lint.] To loose the virgin zonix

\title{
ABBREVIATIONS AND CONTRACTIONS
}

\title{
WRITING AND PRINTING.
}

The following Table embraces all the principal abbreviations commonly made use of in English at the presont day. It also embraces a very few wellestablished and important contractions formed by the use of the apostrophe. A list of the abbeviations actually employed in this Dictionary will be fonnd on page lxxii; but these are repeated here for the greater eonvenience of those who consult the work. It is to be observed that some abbreriations occur only in the middle of sentences, aud are therefore always begun with a small letter;
that others - as those standing for titles - are always printed in capitals, end that others, again, sometimes commence with a eapital and sometimes with a small letter. When two modes are in use, both sre given in the Table; but it is impossible to lay down rules in this place that shall determine which is to be adopted in a giren case. Whea an abbreviation stands for a foreign word or phrase, of which the English explanation is a translation, such word or phrase is given within marks of parenthesis immediately after the abbreviation.

Dill llaving the cotyleto
twice, and the radiele dorsal.
O II III Having the cotyledons folded thrice, and the radicle dors:al.
\(\infty\), or 00 An indefinite ummber; when ap-
plied to stamens, more than twenty.
- Wanting ; none; indicating the absence of a part.
- reet.
- Inches. " Limes.

Jodicates donbt or uncertainty respecting that to which it is affixed or
prefixed;-applied to the names of
cenera or species, of localities, of au Hors cited, and the bike.
indicates ceraninty ; - used as a mark of allirmation or authentication, as of a genus or species, and the opposite or counterpart of? When appended to the name of au author, it indicates that he has examined an nuthentic speci men of the plant referred to, and when ajpended to the name of a locality hat the writer has seen or collected specimens from that locality.
indicates, when appended to a reference, that a good description is to be found at the place referred to. [ \(R\).] indicates doubt or nneertainty ; the same as? [Rare.]

\section*{III. CIIEMICAL.}
- One equivaledt of oxygen; - written abovea symbol representing an element, and repeated to iodicate two, three, or more equivaleots; thus, Fe denotes a compound of one equivalent of oxygen with one of irou; \(\dddot{S}\) a componed of three equivalents of oxygen with one of sulphinr
One equivalent of sulphur; - nsed in the same manacr as the preceding ; thus, Fe denotes a compound of two equivalents of sulphur and one of iron.
ATH dash drawn across a symbol having either of the foregoing signs above it, denotes that two equivalents of the substance represented by the symbol are joined with the number of eqnivalents of oxycren or sulphur indicated by the dots or commas; thus, Fe represents a compound of two equivaleuts of iron and three of oxygen, forming sesqui-oxide of iron.
+ indicates, in organic chemistry, a base or alkaloid, when placed above the initial letter of the name of the substance; as, \(\mathbf{3}\), morphine ; © \(\mathbb{Q}\), quinime.
- iudicates, in organic chemistry, an acid, when placed above the initial letter
of the vame of the acid; as, \(\overrightarrow{\mathrm{C}}\), citric acil ; \(\overline{\mathrm{T}}\), tartaric acid.
no Every elementary substanee is represented, in chemical notation, by a symbol consisting of the initial or abbreviation of its Latin name; as, If for hyArogen, 0 for oxygen, \(A \mathrm{~g}\). (fiom Argentum) for silver, and the like, each symbol, when used singly, always indicating a single atom or equivalent of the substance represented by it; thus, 0 stands for one atom or equivalent of oxygen C for a single eqmivalent of carbon, and the others in like manner. A compound body made up of single equivalents of its constituents is represented by the two symbols of the respective constituents written side by elde; as, fo, a componnd of one equivalent of hydrogen with one of oxygen, forming water. To either prefixed to the symbol, or, more commonly, written after it, below the elther prefixed to the symbol, or, more comm
line; as, DO , or O, t wo equivalents of oxygen.
A secondary compound, as a salt, is indicated by writing the symbols of the constituent eomponuls one after another, with the sign + -between them, the symbol of the base being always placed first; thus, \(\mathrm{CaO}+\mathrm{CO}_{2}\) represent carbonate of lime. A comma is frequently used instead of the sign + , common ly to express a more intimate nnion than would be expressed by that simn The period is also sometimes vsed to indicate a nuion more intimate than that denoted by the sign + , but less so than that implied by a comma. A number written before the symbol of a eompound designates a corresponding number of equivalents of that compond; as, \(3 \mathrm{SO}_{3}\), three equivalents of sulphuric acid, When the formma of the quantity contains several terms, those to which the figure applies are included in parentheses or brackets, to which the figure is prefixed; as, \(3\left(\mathrm{CaO}+\mathrm{SO}_{3}\right)\), three equivalents of sulphate of lime. Miller

\section*{IV. MATHEMATICAL.}

\section*{1. NUMURALS, OR NOTATION.}

Das The Arabic nnmerals are so called because firs, introduced into Earope by the Arabs. 'I'hey were not, however, invented by that people, but were de rived by them from lliudustan. The claracters were originaliy the initial letters of the sanskrit names for the nine dirits, one, two, three, se, but have undergone considerable charges of form. The cipher was originally a dot, used as a mere arbitrary sicu to mark place or local value
In the lioman notation, when any character is placed at the richt hand of a larger numeral, its value is added to that of such nomeral ; as, \(\bar{V} 1\), that is, \(\bar{V}\) \(+1 ; X V\), that is, \(X+V ; M 1\), that is, \(\mathrm{M}+\mathrm{I} ;\); and the like. \(1, X\), and rarely \(C\), are also placed at the left hand of otber add larger numerals, and when so situated their value is subtracted from that of srich numerals; as, 1V, that is, V- \(\mathbf{I}\); XC, that is \(\mathrm{C}-\mathbf{X}\); and the like. Formerly the smaller figure was sometimes repeated in such a position, twice its valne being in such cases subtracted from the larger; as, IIX, that is, \(\mathrm{X}-\mathrm{II}\); XXC, that is, \(\mathrm{C}-\mathrm{XX}\); and the like. Sometimes after the sign 10 for 1 , the character \(D\) (called the apostrophus) was reputed one or more times, each repetition having the effect to multiply 10 by ten; as. 100,\(5000 ; 1000,50,000\); and the like. To represent numbers twice as great as these, C was repeated as many times before the stroko 1 , as the \(D\) was after it ; as, CC1OO, 10,\(000 ;\) CCCFOD, 100,000 ; and the like. The origin of the loman numeral characters is unecrtain, and varions explana. tions of them have been given. It is gemerally smpposed that they were originally arbitrary figns, for which the letters most nearly resembling them were alterward substituted. They are now chiefly employed io dates, headings of chanters, noon the dials of time-pieres, and the like. 'f he most usnal formes in the above list staod tirst, those that stand after these bemg rare forms, or such as are only occasionally used.

\section*{2. TIIU RELATIONS OH QUANTITIES.}
+ Plus; and; more;-indicating addition ; as, \(a+b=c\); that is, \(a\) added to \(b\) makes a smm equal to \(c: 6+4=10 ;-\) ased also to indicate that tigures have been omitted from the end of a number, or that the latter is approximately exact; as, the square root of 2 is \(1 .+1+2136+\)
.Minus; less ;-indicating subtraction; as, \(a-b=c\); that is, \(a\) less or di minished by \(b\) is equal to \(c: 6-4=2\),
tor I Flus or minus ; ambiguons ;-iddicating that the number or quantity to which it is prefixed may have either of the signs + or - ; us, the square root of \(4 a^{2}\) is \(+2 a\).
\(\times\) Multiplied by; timés; into; as, \(a \times b=a b ; 6 \times 4=24\).
n) Multiplication is also often indicated by placing a dot between the factors, or by writing the latter, when not numerals, one after another withont any sign \(; \mathrm{as}, a \times b \times c=a . b, c=\) ubc; \(2 \times 3 \times 4=2.3 .4=24\).
\(\div\) or: Divided by ; as, \(a \div b\); that is, \(a\) divided by \(b ; 6 \div 3=2\).
CO Division is also very often indicated by writing the divisor uader the dividend, with a line betweeo them; as, \(\frac{a}{b}\); that is, \(a\) divided by \(b ; \frac{6}{3}=2\).
\(\perp\) Divided by ; as, \(a \perp b ;\) that is, \(a\) divided by \(b ; 6 \perp 3=6 \div 3=2\). [Rare.]
\(\equiv\) Is equal to ; eqnals; as, \((a+b) \times e=a c+b c ;(i+2=8\).
Is greater than; as, \(a>b\); that is, ut is greater than \(b ; 6>5\).
Is oreater than;-the same as \(>\). [Rare.]
Is less than; as, \(a<b\); that is, \(a\) is less thin \(b ; 3<4\).
Is less than, -the same as \(<\) [Rare.]
\(\downarrow\) Is not less than; - the contradictory of \(<\); as, \(a \geq b\); that is, \(a\) is not Iess than \(b\), or, a may be equal to, or greater than, \(b\), Lut can not be less than it. Is not greater than;-the coutradictory of \(>\); as; \(a>b\); that is, \(a\) is not creater than \(b\); or, \(a\) may be equal to, or less than, \(b\), but can not be greater than it.
\(\mathcal{C}\) Is equivalent to \(;\) applied to magnitudes or quantitips which are equal in area or volume, but are not of the same form, or eapable of superposition, as, \(a 2=b c\), that is, the square whose side is \(a\) is c'qual to the rectangle whose sides are \(a\) and \(b\). [ Rare.]
* Of the form of ; as, \(a *(2 n+1)\); that is, the term \(a\) is of the form \(2 n+1\); \({ }^{17}\) 出 \((2 \times 8+1) ;\) that 1 Is , the odd number 17 is of the form \(2 \times 8+1\). [ Pare. * Is divisible by; as, \(a * b\); that is, \(b\) is an exact factor of \(a ; 8\) \%. . . hare.) quantities without deaignating which is the greater; as, \(a=b\); that is, the quantities without desicn:
-: The difference between, -the same as w. [Rare.]
\(\propto\) Varies as ; is proportional to; as, \(a\) ac \(b\); that is, \(a\) varies as \(b\), or is depend ent for its value upou \(b\).
Geometrical proportion; as, \(\because a: b:: c: d\); that is, the geometrical proportion \(a: b:: \in: d\). [ficre.]
Is to; the ratio of; \}- usel to imicate geometrical proportion; as, \(a: b:=\mathrm{e}: \mathrm{d}:\) As; equals; \(\{\) that is, \(a\) is to \(b\) as \(\epsilon\) is to \(d\); or, the ratio ol' \(a\) to \(b\) cquals the ratio of \(e\) to \(d\).
\(\therefore\) Minus; the arithmetical ratio of; \} - used to indieate arithmetiral propor\(\because\) Lquals; is equal to; tion ; ist, \(a * b:: c \cdots a\); that is, \(a-b=\)
\(\infty\) Indefinitely great; Infinite; infinity;-used to denote a quantity greater thao any finite or assicmable quantity
0 ludefinitely small ; infinitesimal ; insed to denote a quantify less than any assiguable quantity ; also, as a numeral, matrat ; nothomer zero.

, or \(\wedge^{T h e}\) angle butwen; as, ab, or \(\wedge^{\wedge} 1\); that is, the angle between the llaen \(a\) and \(b\), or \(\Lambda\) ind 13 , respectively.
EU Iby some geometers, the aogle befween 1 wo lines, as \(a\) and \(b\), is also ladi. rated by placing one of the lettery dewothar the inclosing limes over the other;
as, \(\frac{a}{b}\); that is, the angle between the liucs a and \(b ; \sin \cdot \frac{a}{b}\); that is, the sino of the angle between the lines \(a\) and \(b\).
\(L\) light angle; the right angle; as, \(L\) A \(B C\) : that is, the right angle A B \(C\).
I The perpendieular; perpendicular to is perpendienlar to; ds, draw A is 1 C 1): that is, Irim a ls perpentienlar to ( 11.
 C 11.
\(\vee\) Liquiangular ; is equiangular to ; as, A liC I) VEF GE II ; that is, the figure
A 1 C C ) is equiangular to the figure E F ( 11 . [hure.]
 lateral to the figure 1 HE H 。[Rarc.]
O Circle; cireamitrenes; \(3 \mathbf{H}^{\circ}\).
Are of a eircle; are.
\(\triangle\) 'Triangle ; the triangle \(;\) as \(\triangle A B C=\triangle 1 / E F\) that is the trangle \(A B C\) is cqual to the triamgle 1) \(1: 1\)
\(\square\) Square; the aquaro ; as, \(\square\) A If \(C D\); that \(i \propto\), the equare \(A\) is ('I)

 siyn. To denote any other than the matar pont, afigure (eablat the intex) ex
 inios, de.: thit is, the cube root, titheroot, tenth rout, dee, of it.
4. कु This sinn is suerely a curnive moniliention of the letter \(r\), which was ased as an aboreviation of the hatio word radix, rowt. Whe Foot of a quantity is also duotenl ly a fractional index at the right hand side of the guantity and above it, the denominator of the index expressing the degree of the root; as \(a^{\frac{1}{2}}, a^{\frac{1}{3}}, a^{\frac{1}{5}}\); that is, the square enbe, and fifth roots of \(a\), respectively Vinculam,
\(\operatorname{lor}\left\{\sum_{j}\right.\), Brackets, inclicate that the quantiti-s to which they are apfhed, of whel are enelosed by thom, are to be taken together ; \(a s, x+y^{2}: 2(a+b) ; a \times(b+\)

\section*{I Brar,}
\(f\) of lo \(^{\text {v }}\) Function ; function of; as, \(y=f(x)\); that is, \(y\) is, or equals, a fuction (1) \(x\).

4ar Virious other leters or signs are fromently user by mathematicians to

aith ut the prirenthesis; at, \(\phi x\), fanction of \(x\).
d lifferential; as, sle ; that is, the difiernatial of 2 :
 able, with respect to which the differential en-efficient is taken, js indicated by writing the letter designating it at the right hand below; as, \(D_{t} \phi\); that is, the differential eo-efficint of \(\psi\) wilh respert to \(t\).
for The fothos d, \(\delta^{2}, \pm, 13\), and sometines othera, are varionsly eraployed by diflerent mathematicians, pretixell to quatitics to flonote that the dithereutiat
 be takent but the ordinary sifgiliwations are those given above. An index is often phaced at the riflat hamb of \(d\), to inclicata the resalt of ome or more repe
titions of the process hanted by that sich; as, des, \(i^{3} x\), de.: that is, the second, third, \&e., differential of \(x\), or the result of diflerentiating \(x\) two, thiree, de: thues. Flion: differential ; as. \(\dot{x}\); that ia, in modern notation, dx. [Obse]

f: This sign is merely a molitich form of S, which is itself the ablereviation of the hatin word summe, sum, the interral being the sum of the dith rentiats. It is repeated to indicate that the opuration of intureration is to be performed twier, or three or more thmes, as \(f f\), \(f f f\), de. For a number of times greator than thre, an intex is commonly written at the right hat athove; as \(f^{m}\) xdx \(x^{n h}\) Hat is, the \(m\) th intecral, or thec risult of \(m\) iurementions of \(x d c^{n 4}\). The variable, with respert to which the intergral is takion, is sommel ine melneated liy writine the fitter designature it at the riaht hand bilow; as \(j_{x} p\), that is the integrad of vith respect to \(x\)
for, denotes that the interal is to be taken between the wabue bof the variable and its value re. fit denotes that the integral emis at the value \(a\) of the vari able, ant/b that it berins at the value \(b\). These forms uast not be confount ch with the similar ons intieating reperationteration, or with that iudicathor the interral with resibert to a particular variathe.
 finite ditherenes, nat in nearly the same maner as the symbol \(f\).
\& liosiduat.
( \(X\) ) A symbol nsed in abbreviations of quanties whose torma lave the

 expan ling \((x+y)\)
(" \({ }^{(1)}\) ) A symbol for a quantic which has no numerical co-mficicots; as, ( \(a\), b,

 dimucter, of a semicirele to its radias, and of the area of a virelt th the square of its rahms. In a circle whose ralius is unite, it is equal to tha somi-cirrum-
 hmeter is anity, it is equat to the circumfermee, or an are of 3ix.
(2) 'llur ratio of the circumf remee of an "reche to the dianeter ;-the same as \(\bar{\pi}\); a griphir motilication of the Letter C, for circmanfirence.
If The base of the Ninprimu system of lograrithms ; the siane ane ; - a graphue morlilication of the letter li, for hase.
, or \(\varepsilon\) (a.) Thu number \(2 .-1\) An at
 of the common system of loyrarithos, the base of which is 10 . Iu this systemu it is "qual la \(0.13+244 \mathrm{n} 19+\)
0 'The toree of gravity. Its value for any latitude is expressed by the formulat

Jegrces ; as, fiw, that is, sixyy hareest
Miantes of are ; as, tor ; inat is, thinty minutes.
sconds of are; as, apof, that is, wemty seronkls.

limins in seouds of are, equal to shert.
 a thril,
Ce. When the number of the arechets would be greater that theer, the corre-

 figures, and also letters, are sometimes ased for the satme purpose ; as, \(a^{1}, a^{2}\), \(a^{n^{2}}, a^{\mathrm{n}}, a_{0}, a_{9}, a_{z}, a_{\mathrm{m}}, a_{\mathrm{z}}\), and the like.
, a, de. Intiees placed nhove ant at the ripht hand of quantitios to denote that they are raised to powers whose dercom is mudiated by the figure; as, or ; that is, the tirst power of \(a ; a^{2}\), the ngure or second power of \(a, a^{3}\), the cube
or thind power of \(a\); and the like. or thind power of \(a\); and the like.
F. \(y^{-}\)'Iheser simns are also oft unsed toindicate the repetition of an operation;
 pre often preeded by the nerative sizu to indiente the redprocal of the cor-

Tanonding power, or an inverse aperation ; \(n a, a-1, a \rightarrow 2, a-3, a \rightarrow 0\), se, which are rempetively "quirabent to \(-\frac{1}{12}, \frac{1}{12^{2}}, \frac{1}{1 u^{3}}, \frac{1}{0^{4}}\), \&e.
sin. \(x\). The sine of \(x\); that is, of the are relureselited by \(x\). In the same maner cos, \(x\), tiu, \(x\), cut, \(x\), spe. \(x\), cosec. \(x\), versin. \(x\), and eovers. \(x\), demote re spectively the cosine, tugrent, cotagent, sceant, cosceunt, versed sine, and coversed-wind of the are reprosented by \(x\).
sin. \(-1 x\). The ure whose sme is \(x\). It the amme manner cos. \(-1 x, \tan )^{-1} x\), cot. \({ }^{-1} x\), sec. \({ }^{-1} x\), cosec \({ }^{-1} x\), versin. \({ }^{-1} x\), und covers. \(1 x\), are used to denote respertively the are whose cosine, timpent, cotagent, sechat, cosecant, versed sive, or co-versel sine is \(x\).
Po This sign mast not be confondel with the negative index desionation the reciprocal of a quantity, which would be applied to a jurenthesis indosing one of these expressions; as, \((\sin . x)^{-1}\), which is equivalent to \(\frac{1}{\text { kinf. } x}\).

AXX Nie of triplestroneth.
for The orifin of the siyus has ben variously accountel for; but it is prot-

Spanish coin of the value of a collar．It was in use long before the adoption of lower than the \(F\) of the first space of the treble clef；－alled also berss clef．Seo the Fecteral currenoy．The sign／is thought to have bern orignally a eapital S（written thus，\(f\) ），standing for the word Shillings．The character \(£\) ，for Pommls sterling，is merely a capital \(L\) with a mark drawn across it，and rep－ resents the corresponding 1 atin word Libra；while fo，or pound weight，is formed from tbe first and third letters of the same word，connected by a similar or to，or perhaps of its first letter only．中＂is another form ot \(p\) ，the initial litter of the Latin word per，by．\(\tilde{\delta}\) is a cutsive variation of \(\div\) ，the sign of division； thus，six per ceut．may be expressed by \(\frac{G}{1 / n}\) ，or \(6 \div 100\) ，or，without iudieatiug the denominator，\(i\)－- ，wheuce，in rapid writing， \(6 \%\) or \(6 \%\) ．The other charac－ ters need uo explauation．

\section*{VIII．MUSICAL．}

ㅂ
Staff；the five lines with the fonr spaces bet reen them，useal to iudi－ cate the relative position of notes in the scale，as regards fiteh．
beine them，according to the necessities of the ease，aud are called liger lines， or added tines．See Leger in the Ilietionary．
lar ；－the line drawn perpendienlarly across the ataff to separate the notes into measires of equal or given lengths．Donble bar ；－used to mark the larger divisions of a picee，especially，in pank or of a verse or seutence．
Close；－used to indicate the
Notes；characters placed npon the lines or spaces of the staff，indicating，by their form aulphosition，the length aurd pitelf of the tones are called，respectively，semibrere，minim，crotchet，funter，semiquover，and ficmi－ scmiquaver，each figure after the first indicating a tone 11 oue halt the length of that represented by the limure immediatuly preceding it．A dot after a note adds to i one half of the leugth of the same note without the dot；thas，二＿二．：is equal to The stems of the notes are turned either
npward or downwand， aps is most couvenient in
placing them on the staff；thus，

When many notes of the sante kind are to be used，an abbreviated nutation is sometimes cmployed．The strokes ，\＆e．placed over a note，or written across the stem of it，signify that it is to be divided into quavers，semi－ quavers，demismiquavers，de，respectively，as in the following exmmples， where \(\omega_{0}\) signities writhen，and \(j\) ．，perjormed．

These marks are also used to direct the repctition of groups of notes preceding then in the stme measure ；as，

3 3， 3 ，\＆c．，are marks placed over groups of notes，and need to indicate that \(3,5,7\), se，notes（all equal），are to be jerformed in the time of \(2,4,6, \& \in\) ，notes of the same kind respectively；is，

which are performed in the same time as and respectively

Rests ；－characters indicating silence，or a panse in the performance，the length of the painse beine intibatom by the lorm of the charactor．Thus，the characters here given， taken in their order，indlicate panses of the same
ength as the following notes respectively．

WDO More than three hooks or strokes may be at－
tached to the stems of the rests，to medeate shorter panses corresponding to the shorter notes．liests may be lengtiened in the same manner as notes，by placing a dot or two duts after then．A rest，or pause of a whole measure，is
 mdicated by the mark er placed mpon the fonth line，the agure \(\begin{aligned} & \text { above；and to express a rest of two，three，dee，measures，a similar notation is }\end{aligned}\)
 over which is written the mumber of mensures ineladed in the rest or paise over which is written the mun

Gelef；－placed upon the serond line，to indicate that every note upon that lum is to be sombed an \(G\) of the natural seale ； －called also treble clef．Sece Cuef in the Dictionary．Fered；－ placel upon the fourth himn，to intiente that rvery note nipon
G Clef．F Clef．phat line is to be sombled as \(\mathfrak{F}^{\text {c of the natural beale，au vetone }}\)

Clef in the Dictioury
Celef：－mdieating that every note upon the line or space on which －- －the character is placed is to be sommdad Cof the maturn seale ；－callind －－also tumer This siru is nut livel be the preedilur two but buy lawe four dinerent positions on the staff．，Sue Ct．EF in lict． Fiat ：－used to indicate that the nute before which it is placell is to he －5－souncen lower by a half－step than the same note without the righ． When placed on a line or spare at the begiminir of a piece，it sionitiey
that every note on such liuc or spate is to be sounded lower by a half． that erery uote on such
an in the natural scate．
tep than in the natural scate
50 This character is a modification of the letter \(\Gamma\) ，orimanally introduced to avoid the tritone，or sbarp fourth，between \(\mathrm{h}^{9}\) and b uataral．

\section*{－}
－5im－Singte flat，as used after a donblu flat．
－－Sharp；－used to indicate that the note before which it is plancl is to te sounded higher by a half－step thau the same note withour it．It is ap－ phed in the same way as the flat．
R27－This character was origimally desioned to represent，by its four cross－lines， the four commas of the ehromatic keale．－＇the sharps or flats placed at the heginning of a piece to deterinine the key or pitch are ealled the signature of the picec．Sce sicnature iu the Dictionary．

Double sharp；－used to raise a note，already sharped，a balf－step．

\section*{Siugle sharp，as used after a doulte sharp．}

Natural ；－nsed to contralict，or counteract the effect of，a jrev fous \(z^{2}\) or b either expressed or implied．

liepeat ；－placed at the ent of a passage to denote that it is to be performed a sceond time．Sometimes the dots are phaced also at the begiminar of the passage．Heavy
marks are oceasionnly ndod above imd below marks are oceasiomilly ndded above ind below
to entable the performer to distinguish the berin－ the character，to eniable the performer to distinguish the berin－
bing or＇ind ol the passage to le repeated，or to call his attention uing or rind or the
to the repeat；as，

（ \({ }^{\circ}\)－Characters marking common time，the former iudicating two min－ F．Nign；－used to mark the point to which reference is made，or from which the repetition of a passage is to begin．

Appoggiatura，or leming note；an embelishment consisting of a note the inced before another note，one step or half－step cith：r above or below the latter，and usually taking half the time of the principal wote；as，

－An embellishment consist－ mg of two aplorgiaturis， the principal note；as，

－or \(X\) Aeciaceatura；－an embellishment very similar to the appogriatu－ ra，but performed much more lightly amf quickly．When writen with netroke aeross it，as in the seeme examble，it is performed very quickly， beng，as it were，driven into the fullowiner note

I species of acciaceatura；－sometimes called double acciuccature．It

above；as，
＊Turu；indicating an embellishment consisting of the note over which the character is phaced，the note above it，aud the semitone below it，performed 14 quick sucecssion， generally as a triplet ；as，
A20．When the note above is flated，the clamacter is writen b；when the note below is sharjed，it is writ－
 ten ※．It may also be written with the natural sigu［ \(\xi\) ］in place of either of these，when the corresponding note should have that sign placeal before it．

2．Interted turn，consisting of the same uotes as the turn，jerformed in reverse order；：as，

If．Trill ：slake；－indieatiner that the note to whim it belones is to be rapho jully alternated with the note above．A waviner line（ ．．．～）is often added after it，indicating how far the shake is to be extemed ；as

Sce Shatie in the Dictionary．
＜＜，or－es Vihation；－indicating the rapinl repelition of an＂mphasin

 It abo sometimes denotes that the note is to de sonded in a tromulous man－ ner．

Arpargio：－uscil in piano masic，to domethat the notis of the flord le－ form whith it is written are not to be struck simultanconsly，hat an equick

 it culs forms the catuchation of the picer as
＝－．Organ tone；indienting that the sound is to be evenly and uniformly maintained，that is，with a uniform lonlness；－not often ned．
Crescendo；－indicating that the volume of soume is to be arralmally increased．
Theereseculo；diminuendo ；－indicating that the volume of sound is to be gratually diminishent．
frealual swelli－itadicating a gradual inerease or ereseendo fbllowed by a fraulual decrease or decrescendo．
zound iudicatus a gradual decrease followed by a grakiunl jucrease of sound
Sforzando，or Forzando；－mdicating that the note or chord，over or under which it is phatid，is to be struck wath a force aml sn emploasis whels are imb－
 thou \(f z\) or sif．
the The marks \(\div\) ，or - ，are also sometimes used with the same simmeation．
\(<\) Pressure ione：－indicating that a sound begme soft is to be instautly in－ crensed to a lourl tove．
－staceato：－placed over or uyder a note，to indicate that it is to be struck
with force，and performed in a short，sharp，emphat ir manmer
With force，and performed in a short，sharp，emphatir，manner． ento，but not wo emphitically and sharply．
ento，but not wo emphitically and sharply．
pat lo indicate a still lower degrec of enthasis nod distinctnesa the
fer ho indicate a still lawer legree of emp
slur is sometimes written over the thots：as，
which or orer or under which it is placed are to be performman an smaoth，commeted manner．It is also used to connect two or more nutes which nre to be snug to one syllable， or to be united into one lour note．

Brace；－used to commect those ntaffs of a composition or score which are to he perforaned together．
Av Direct；－placed on that line or space at the end of a staff，which is necupied by the first note of the lollowing stall，to malicate the position of the latter to the 1 serformer．It is now rarely used．
\(P=m, P=G 0\), de．A notation used in indieating the proper time of a piece Thus，\(P=80, O=60, \mathbb{S} \cdot\), denote reapectively that 80 erotelets or quarter notes，and 60 minime or baffotos，are to be performed in ome minate；or that Cach wate of the kiad indicated is performed in the time of one viluntion of the pendulum of a metronomar，when the nut is set at \(\$ 0\) or 60 ，se．，respectively．
＊\(\oplus\) ，or \(\hat{f}\) Churaters used in music for the piano－forte，directing the use of the pellale．The lant two ure less frequently used．
X，or 惊 A mark usud atter the preceding，and directing a discontiannnce of the use of the protals．
［7，of A（＇laraterers somutimes used in music for the violin，the former to ln dieate a dou＊bow，the latter an up buw．
andiontes a phrase，or inconiplete nusieal iswa．
7 inullates a section，or completo but mot imberndent iden．
indieates a periou，or complete and lndependedt musical sentence．
A2 The ordinary marks of punctuation［，：：］are usied by sous composers instian of theme thiter charnuters，or for a sinnitur purpose．
\(f\) Forte；with a lome sount．
fof Furtissimu；with is sound londer tham forte．
AEf fff iudicates a still Louler sount，the loudest the voine or instrument is capable of producing．
fz Forzando，or Gforzando：－innlionting that the noto is to leestruck with force
 It is alst）sombethues indicated oy the bitters fo．
\(m\) Hezzo：wath a sound of metimin strenctio or londuess．
\(m f f^{\text {Wezzo forte；with a moderately loud sound．}}\)
y 1 iano；with a soft or low somme
in Jimissimo；with a sound softer than piano，but firm nuel nubible．
Rer mp is sommomes used to demote a very low or sort sound，softer than pianissimto．
\(r f\) ，or rfz Rinforzando，or Sforzimulo；the same us \(>\) ，\(f\) ，or sfo
sf Sforzando，or Forzaudo．Sue＞and fs．

\section*{HERALDRY.}

COLORS AND TLNCTURES DESCRIBED BT LINES, DOTE, sc.

Beside these Tinctares, there are nine Roundles, or Roundelets, peed in Her aldry, the names of which are suffelent, in blazoning, to denote their color, without espressing the same. They are as follows:
\(\left.\begin{array}{l}\text { Besants, } \\ \text { Plate, } \\ \text { Torteaus, } \\ \text { IIurts, } \\ \text { Pommes, } \\ \text { Golpes, } \\ \text { I'ellets, } \\ \text { Oranges, } \\ \text { Guzes, }\end{array}\right\}\) whth are of \(\left\{\begin{array}{l}\text { Or. } \\ \text { Argent. } \\ \text { Gules. } \\ \text { Szure. } \\ \text { Yert. } \\ \text { Purpure. } \\ \text { Sable. } \\ \text { Tenne. } \\ \text { Sanguine. }\end{array}\right.\)
- Some heraldists deacribe this by horizontal, In place of perpendicular, with diagonal lines.

[^0]:    "There is no knowledge of things convered bren"s werds, when their ideas agree not to the reality of things.
    He that hath names without ideas, wants meaning in his words, and speaks enly empty sounds. . . . The unly sure way of making known the signification of the uame of any simple idea, is ly presenting to his senses that subject which may proluce it in his mind, and make him actually have the idea that word stands for. . . . The shape of a horse, or eassiowary, will be but rudely and imperfectly imprinted on the mind by words; the sight of the animals doth it a thonsand times better. . . . It is not unreasonable to propose that words stauting for things which are known and distinguished ly their outward shapes should be expressed by little draughts and prints made of them. . . . Naturalists, that treat of plants and animals, have found the benefit of this may; and he that has had occasion to consult them will lave reason to coufess that he has a clearer idea of apium or ibex, from a little print of that herh or beast, than he could have from a long definition of the names of either of them. And so, no doubt, he would have of strigil and sistrum, if, instead of curry-comb aud cymbal, which are the English names dictionaries render them by, he could see stamped in the margin smadl pietures of these instruments, as they were in use among tho ancients.

    Such things as these, which the eye distinguishes by their shapes, would le best let into the mind by draughts made of them, and more determine the signification of such words than any other words set for them, or made use of to defne then."

    Locke on the Human Cnderstanding.

[^1]:    - Many acenrate speakers protract the inttial clement of the af anand in paront somewhat mote than they do lactore, pair, 心e, while, nt the rame thme, ithey are carcful nnt to lef it glide lnto the vanlahligg è. So also in uphurent, trans. perrent, there, and some other words.

[^2]:    Note.-Thas sound is formed by the compresaion of voealized breath, or volee, within the month, while the lips are shut and the hack noatrlls are clomed by covering them with the noft palate. When preceded by m, or followed hy 1 , th the name syllable, $b$ is gencrally silent, 刀a ta bomb, climb, fomb, delof, fonh, swe name, \&c, dccumb, dithyromb, tumb, succumb, rhomb, rhumb, are antal to be
