PARIS: FOTIIERINGIIAN.

## PREFAC.

since the publication of the Revised Eition of Webster's Dictiovary in 1847, the purpose has been kent steadily in view to prepare another edition embracing all the alterations and improvements which the progress of the language and the additional facilities for improving its Lexicography might seem to require. The late lrofesser Goodrich had, from the first, directed his attention to the collection of words not inserted in the previous edition, amd to the preparation of definitions of meanings which had been overlooked, or were made necessury by new applications of words in the writings of respectable authors, and by the progress of Science and the Arts.

Many of these words and definitions were given to the public in the Pictorial Edition of 1850, together with numerous illustrative wood-cuts. To these was added a large collection of discriminated Sy:nonys, which had beer: carefully prepared by Professor Goodrich. This Edition was, however, a provisional one, designed to serve only untithe more careful and thorough revision, which had been so long in contemplation, conk be perfectect.

In preparing for the present revision, the attention of both the Editor and the Publishers was first directer to the Etymology. They were awire that, however adnirable the industry and valuable the contributions of Dr. Webster in this department, the science of comparative Philology was ly no means perfect in his time, if indeed it could be said to exist at all. It is only within a very few years that the trae principles on which this science rests have been suggested and confirmed, and the methods have been determined by which future investigations may be successfully prosecuted. It seemed necessary, tirst of all, that these new prineiples and methods should be applied in the entire revision of the Eymologies of Dr. Webster, by a schohar who had made Etymology his special study. In 1854, arrangements were made with Dr. C. A. F. Mans, of Berlin, l'russin, to modertake this task. Dr. Mahn was reconmended by some of the most distinguished scholars of (icrmany as admirably qualified for the service, and he had beeu favorably known by special researches in this department. He has employed several years upon the work, and has performed it in a manner worthy of his high reputation. The results are submitted to all persons who are interested in philologieal studies, with the belief that they will find in them a new and valuable contribution to the stores of linguistic knowledge. 'This featme of the present edition will, it is thonght, be acknowledged ly all scholars as one of marked superiority, and will be gratefully welcomed by the now very large number of instruetors and stadious persons who are interested in aequiring at more thorough knowledge of the Emglish langnage.

Professor James D. Dana, of Yale College, hat been engagen, at an early date, to revise the defintions in Geology, Natural History, etc., amt the revision in these and some kindred deparments has been completed by him, or h:: passed under his careful serutiny.

The work of revising the definitions of the principal words oceasioned great and perplexing dificulties to lrofessor Goodrich and those with whom he conferred. He was well anare of the defective method which had been admpted hy Dr. Jonson, of defining words hy emmerating and explaning their spectial applieations rather than ly develophir their lroadly-distinguished meanings; amd he knew that in this, Johnson hat firnished the model for most, if not all, of the defining dictionaries of the English hanguage which have since been published. Wr. Wehster, in his strietures on Johnson's Dictionary, noticed, as one of its defects, that the author hat, in many catses, fialed 10 exhibit full and explicated definitions of important significations. This faml 1)r. Wedster chleavorel to aroid, and with manifest success. His own definitions are superion to those of Johnson in fulmess and precision, as well as in the greater copionshess and approprateness of illustrative pluases. But he hat not emancipated himself entirely from the influche of Juhnson? example in accumatating definitions that are really the same, thengh at first sight they may appear to be dillerent. In $r$. Webster insists, also, with earnestness, that it is the duty of the lexiengrapher to give first the primitive signifitation of every word, and to develop and arrange the depement meanings in the order in which they were derivel. but his theory in respect to these and other points was better than his practice. Of these and other imperfections in I)r. Ẅehster's definitions, Professor Goodrich was fully aware. He was also aware that the dictionaries of many other languages, both ancient and modern, had been constructed on a better theory and after hetter methonls. He had formed fur himself a conception, more or less distinct, of the proper methol of exhititing and illustrating the definitions of the leading words. But it seemed to him an Hereulean task to undertake to revise the work of Dr. We cbster, and he was reluetant
to assume the labor and responsibility which it involver. At last, with enfeebled botily strength, he consented to enter upon a tentative process in comnection with able and experienced associates. These associates were, at first, Mr. Whliam G. Webster, the Rev. Cuauceey Goodrich, and Professor Ciester S. Limay, of Yale College, all of whom lad been employed in preparing the Pictorial Edition. Only repeated trials could satisfy so conscientious a lexicographer as Professor Goodrich in respect to the best plan of suljecting to new forms of expression the mass of valuable matter accumulated by Dr. Webster, and of re-arranging it according to more approved methods. The undertakiag involved so much labor, and required changes so extensive and material, that Professor Whliam D. Whinney and Professor Daniel C. Gilman, both of Yale College, were soon aldell to the corps of associates. To these gentlemen was assigned the special duty of suggesting the changes and modifications which seemed to be required in the definitions of the principal words, their suggestions being submitted to Professor Goolrich for his judgment and decision. Under this arrangenent, the work of experiment was going on till the death of Professor Goodrich. This untowarl event occurred, however, befure the experiment had been carried so far as to determine how much it was desirable to attempt in the way of recasting the definitions, or how much it was practicable to accomplish.

After the death of Professor Goodrich, in 1860, the direction of the work of revision was committed to Professor Noail Porter, who had been intimately acquainted with his views ever since the publication of the Revised Edition of [847, and had frequently conferred with him in respect to the excellences and the defects of that edition, as well as the methods by which these defects might be remedied. Before the present revision was undertaken, Professor Porter had communicated in writing his views of the changes which ought to be made in the matter and form of the Dietionary; and, with a full knowlelge of these views, Professor Goodriel had earnestly solicited him to undertake the entire responsibility and direction of the work. When the proposai was renewed by the proprietors of the copyright and by the family of Dr. Webster, it could not easily be declined; for it was enforecl by considerations of affection and of duty both to the living and to the dead. But the service was assumed by him with great reluctance, as being foreign to his special studies, and incompatible with very pressing occupations. At the urgent solicitation of his valued friends the pu'lishers, as well as of the family interested, and of his beloved associate, the late Edward C. Ilerrick, -whose requaintance with the Dietionary; and whose interest in it, extended back to the publication of the first edition in 1828, - he at first consented to undertake a general superintendence of the revision, but soon, by the force of circumstances, was constrained to bestow upon it a more minute attention. The collahorators already named continued their services to the end, and others were from time to time employed for a longer or a shorter period.

The following persons have been actively engaged in the preparation of the work. Mr. William G. Webster, who has for many years labored in this fiell, first in connection with his honored father, and subsequently with Professor Goodrich, - has represented the views of his father and of the family, in respect to all questions of doubt or difficulty, and has also attended to the syllabieation of the words, the determination of the accents, and the marking of the pronunciation. Professors William D. Whinvey and Daviel C. Gilmas have labored at the definitions of the principal words, recasting, re-arranging, and condensing them, introducing citations, de.; their work, in all cases, having been sanctioned or revised by the Editor. Professor Cuester S. Limas has given his attention chiefly to the terms in Mathematice, Plysics, Technology, and Machinery, with the exception of those relating to the Steam-engine and to Railways. These last have been carefully defined, and in some cases furnished, by Alexander L. Holley, Esq., an eminent Civil Engineer of New York, who has also contributed many original and valuable drawings for the illustrative woodcuts. Captain William P. Crathile, of the United States Engineers, recently Assistant Professor of Military and Civil Engineering and the Science of War, in the Military Aeadeny at West Point, has given a like attention to the terms in Military Science, Enginecring, and Gumnery, furnishing original drawings when necessary. It has already been stated that Professor James D. Daxa had several years since been employed in the departments of Geology, Natural History, etc, to prepare new definitions, to recast the old, and to select new words. At his suggestion, William C. Mivor, M. D., was employed to render assistance in these departments, and he has labored with great ability and zeal in connection with Professor Dana, who bas, in every instance, carefully reviewed and expressly sanctioned his work. The terms pertaining to Musical Science and Art were chiefly prepared or revised by Lowell Masor, Esq., of New York; lut many of the articles were written ly Jons S. Dwagt, Esq., of Boston. In Physiology and Medical Science, Professor R. Cresson Stiles, M. D., has firmshed many carefully considered definitions and emendations. The Hon. J. C. Pemins, of Salem, Massachusetts, who has had long experience as editor of various ian publications, has, with great labor and care, vevised the terms of Law and Jurisprodence. He has aimed to phrase these definitions in the more exact language which is required ly the advance of Legal Science, and to support them by copious references to legal anthorities. E. B. O'Callagnan, S. J., of Albany, has revised and rewritten the detinitions of such terms as have a special meaning in the Roman Catholie Chureh. It having been deemed desirable slightly to condense some of the etymological articles furnished by Dr. Mahin, and to translate portions of them into English, this work was committed to the eare of Mr. Eugene Ėchurler, nuder the direction of Professor James Hadler, of Yole College. The derivation of a number of worls of Indian origin has heen furnished by the Hon.
J. Hamond Trumbule, of Llartford, well known as a learned and cecurate student of the aboriginal languages of America.

To the Rev. Chauncey Goonricir was committed the very important duty of receving the mass of material furnished by the most of the assistants who have been named, verifying its accuracy, and then incorporating it into tho final copy for the printer. In this work he was assisted for several months by the Rev. Fisk P. Brewere and the lice. Jonn M. Morris. Mr. Goodrich has also revised or prepared many of the definitions in Agriculture and Iforticulture, in Antiquities and Architecture, in Biblical matters and Eeclesiastical History, in Commerce, Domestic Economy, amd the Fine Arts, making use of the best authoritics in each of these departments. He has also bronght to the service the results of his own experience while laboring under his father's guidance, and the remembrance of his father's views and wishes in respect to many important details.

It was thought desirable, in order to secure the greatest possible accuracy and perfection to the copy, to place it for further revision in the hands of some scholar of critical habits and approved experience, who had not been concerned in its earlier preparation. Accordingly, Mr. Willam A. Wheeler was employed for this service, and also to correct the proof-sheets; and with him was associated, at a later period, Mr. Artnure W. Whengr. Mr. Wheeler was also employed in various other services hereafter to be naned; and he has furnished especially valuable contributions from his ample literary stores, and given the work throughout the benefit of his exact learning and his nice discrimination. Mr. William G. Webster shared with Mr. Wheeler and Mr. Wright the responsibility of correcting the prools. Mr. Samuel Porter, of Hartford, besides reading a portion of the first proofs, has examined with great care the final or plate proofs; and the Dietionary is much the better for his detection of oversights, and for the alterations he has suggested. Valnable assistance has been reccived from various persons comected with the Boston Stereotyp Foundry, especially from Mr. Thomas Holt, the Reader of the establishment, whose taste, experience, conscientions fidelity, and accurate but unpretending scholarship, have materially benefited the work.

The preparation of the Appendix was intrusted almost entirely to the supervision of Mr. Wheeler, who has read every page of it with critical care. The "Pronouncing Vocabulary of Scripture Names" was wholly prepared by him, and he constructed the very interesting and valuable "Vocabulary of the Names of Noted Fictitious Persons, Places, Etc. The full and accurate "Pronouncing Vocaloulary of Greek and Latin Proper Names" was prepared with much labor and care by Professor Thomas A. Thacner, of Yale Cullege. The "l'ronomelng Vucabularies of' Modern Geographical and Biographical Names" are the work of Dr. Josefn Thomas, of Philadelphia, anthor of the system of pronunciation in Lippincott's Gazetteer of the World, and his name will be a suflicient guaranty for their trustworthiness and value. The "Etymological Vocabulary of Modern Geogriphical Names" was prepared by the Rev. Cuarles II. Whamere, of Cambridge, Massachusetts, who also prepared the Explanatory Vocabulary of Christian Names, from materials furnished in part by Charies J. Lukexs, Esq., of Philadelphia. The Table of "Arbitrary Signs used in Writing and Printing" was originally prepared by Professor Lyman, and has been revised for this edition by Mr. Wright and Mr. William A. Wheeler. Mr. William G. Webster, with the assistance of several of the other collaborators, has revised and greatly improved the list of "Abbreviations and Contractions used in Writing and Irinting," and the list of "Quotations, Words, Phrases, Proverlos, etce, from the Greek, the Latin, and Mudern Foreign Languages," which were originally compiled ly him. A particular account of the various vocalonaries will be foumt in the general Preface to the Appentix, and in the special Prefaces to the vocabularies themselves.

The elaborate and learned Introduction to the previous editions has heen omitted. It is not without regret that this vencrable memorial of the enterprise, the sagacity, amd the scholarship of lor. W" (hster, lass been displaced to make room for new matter more in accordance with the advance of Phitological scicnee and the wants of the present generation. To supply its place, Professor James Ifalley has contributed "A Bricf History of the English Language", designed to show its philological relations, and to trace the progress and influcnce of the caluses which have lirought is to its present condition. Professor IIadley has also contributed his advice in respect to numerons guestions, philological and general, whieh were constantly arising, and has given his sanction to the prineiples and ams that have guided tho Editor and his collaborators in the changes which have been adopted in this celition.

The Preface of the Editor of the Revised Edition of 18.17, the Preface of the Anther to the original edition of 1808, and the Memoir of Dr. Webster by I'rofessor Goodrich, are all retained in this elition, as eontainung sume important details of literary history, and as furnishing a concise statement of the pincipks which were adupted in the preparaticn of the successive editions of the work.

Tho "Principles of Pronunciation", originally prepared hy frofessor Goorlich for the edition of 1 sing have heen carefully revised and much expanded lyy Mr. Wheeler, whose attention had bern previonsly directem to this subjeet in the preparation of "A Manual of English Pronumeiation and spelling" (Boston, Isti). Mr. Wheder has also revised and much enlarged the "Synopsis of Worls Differently Ironomeed by litherent Ortheïpists," which wats originally prepared ly Dr. Josern E. Wowestam, and insetted in the Octavo Abridgment of Webster's "American Dictionary," and which was atterward revised ly !'rofessor Goodrich.

## PREFACE.

Besides the persons already named in connection with the special services which they have rendered, a large number of persons have contributed important materials and suggestions to the principal collaborators. Among these, particular mention should be mate of Mr. H. S. Diss, of Woodstock, Vermont, who furnished a large and eritically selected list of words and readings from the dramatic and other writers of the age of Queen Elizabeth. For the abundant and varied collection of illustrative passages and citations which were at tho service of the levisers, they are indebtel to the zeal and painstaking of many devoted "readers" for the Dietionary, not a few of the most faithful and judicions of whom were ladies.

To the lIon. Geurge P. Marsir, the Elitor is under obligations for some valuable suggestions in respect to the principles which should be followed in the preparation of a popular English Dictionary:

It is not practicable to ennmerate here the works contained in the library of authorities furnished to the Editor and his associates by the enlightened enterprise of the publishers. As this Dictionary was designed to be not merely a compilation, but a digest of results olntained by independent research, comparatively few references are made to other Dictionaries and Encyclopedias. But the best works of the kind have been freely consulted, and, among them, the well-known Dictionary of Dr. Joseph L. W Wreester, which is so honorable to the intustry of the author and the scholarship of the country.

The features of the present Edition which descrve to be specially enumerated are the following: -
I. The lievised Etymology. This feature has already been noticed. It is believed that critical readers will acknowledge the learning, the brevity, the somed judgment, the self-explaining order, and the minutely-traced ramifications, which characterize these etymologies, and it is hoped that they will attract the attention and stimulate the studies of all who desire to know more of the varied history of their mother-tonguc.

1I. The Revisel Definitions. The afefintions of the principal worls, not scientific or technical, have been carefully elaborated by Professors Whitney and Gilman, each possessing peculiar qualifications, and each performing his work as thoroughly as was possible within the limits preseribed. Their work was careftally reviewed by the Editor before it was admitted into the copy. The rule which he atopted for his own guidance was frecly to accept and make any change in the matter and the language of the previous edition which he had reason to suppose would be desired by Dr. Webster himself, were he now iving, and fully possessed of the principles which have been universatiy accepted by morlern philologists and lexicographers, or which Professor Goodrich monld have sanctioned, had he been able to give to the work of revision the full measure of his well-known cnergy and sagacious judgment. In accordance with this rule, great pains bave been taken, 1. To contract and condense the definitions into as few general heads, or numbered divisions, as was practicable. In this the example of Dr. Goodrich, in his experimental work, was followet, and the Revisers have sought to avoid all redundancy and tantology, to strike out all mere enumerations of particular applications of meanings, and to reduce the number of illustrative phrases to the actual wants of the reader. While they have been thus bold on the one hand, they have been studiously careful, on the other, to retain the exact language of the earlier edition, in every case possible, estecming very bighly Dr. Webster's plain and clearly-expressed definitions for their own sake as well as for that of the author, and preferring to err on the side of cautious reverence rather than on that of thoughtless innoration. In many cases in which the numbered articles under a word bave been diminished, it will be found that the number of real definitions has been materially increased, and that the gathering of them into fewer groups has contributed to their more easy comprehension and more ready use. A single article often includes a group of kindred meanings, and thus enables the reader to view at a glance their close relation and similarity, and to trace out the subtle movement of thought by which one was evolvel from another. Often, too, a well-chosen citation from a good author lias been preferred, as a means of definition, to an explanatory circumlocution. 2. An effort has been constantly made to develop and arrange the several meanings and groups of meanings in the order of their actual growth and history, beginning, if possible, with the primitive signification, as indicated by the etymology. As this, for many reasons, has now become possible in numerons cases in which it was impossible in the time of Dr. Webster, and as, in many instances, Dr. Webster did not perfect this order when the materials were within his reach, it has been often foumd necessary, in the present ellition, to change the arrangement of the definitions. Special consideration has been given to this proint in view of the fact that the study, or eren the casual notice, of the order of growth in the meanings of single worls, is a stimulant of thought, and the habitual attention to it is of itself an education. 3. Many new meanings have been added, either as they have been brought to light by an extended examination of anthors in the eallier and later periods of English literature, or as they have occurred to the Revisers in performing their work, or have been suggested by the kintness of critical and thoughtful friends.
III. The Illustratice Citations. Special effort has been made to obtain illustrative passages from classical Eng. lish writers, both old and new. In order to collect such passages, and also to discover words and meanings that hat been omitted in other English Dictionaries, a systematized plan was devised by which a large number of works in ail departments of literature were carefully read by many competent persons, and a copions collection of illustrative pas-
sages was placed at the disposal of the Revisers. The principal dramatic authors, and various prose writers, of the age of Queen Elizabeth, were read with care by Mr. H. S. Dana. The plays of Shakespeare and the poetry of Mitton were earefuliy studied by the aid of the excellent Concordances of Mrs. Mary Cowden Clarke and Mr. Guy Lushington Prendergast, with particular reference to any special usage which these poets have sanctioned. The most prominent in the long series of English writers, down to the hatest, have been read for the purpose of selecting illustrations, especially those writers whose nse of language is particularly idionatic or classical. Sir Walter Scott, Southey, Coleridge, Lamb, Byron, Washington Irving, De Quincey, Macaulay, Temyson, Ilawthorne, and many others, have received as much attention as the older writers. A comparatively small portion only of the passages wheh were marked and copied has been actually used, it being thought undesirable to multiply such passages when they were required for no valuable end. In cases where to cite a passage would serve no purpose in illustrating a meaning or justifying the use of a word, the name only of the author has been given, provided, as in the case of words obsolete or not now approred, the authority of some writer was deemed desirable. The free use of this large and varied collection of citations will, it is thought, add greatly to the value and interest of the present edition. It is believed that no dictionary of the language contains so many apt illustrations from so large a varicty of writers. The citations which lave been retained from the preceding editions, as well as those introduced for the first time, have, as far as possible, been verified and copied with scrupulous care. Such passages were preferred as would throw additional light upon the definitions, or as possessed any interest of thought or of language.
IV. The Tocalutary. No pains have been spared to introduce additional words, provided they were of such e, character as to deserve insertion. At the same time, the Revisers have been actuated by no desire to swell the list to the greatest possible number. Worls which were the offyring of the individual conceit of a whimsical or lawless writer, which did not conform to the analogies of the language, and which were never accepted or approved by good writers, of their own or a subsequent generation, have not been admitted. On the other hand, new words which have been acknowledged and approved as good have been carefully garnered, whether used by ohl authors or new. A great number of obsolete or obsolescent words, which were once accepted and freely used, bave been recovered by the readings and researches that were directed in part to this end. Selfexplaining compounds have been designedly omitted by hundreds, if not by thousands, while care has been taken to introdnce and expl:in all those which need to be defined. It will be observed, however, that this edition diflers from the former editions in following a strictly alphabetical arrangement of all such words. The participles, participial aljectives, and verbal nouns host cases do not appear in the vocabulary as separate words, but are given under the verbs from which they are formet, and which explain their meaning. But the participial adjectives and verbal noms lave a separate place and treatment, in those cases in which they have obtained a meaning different from that which they derive from the verbs to which they belong. The principal parts of the verbs, regular and irregular, are given together, within brackets, under the verb, instead of being entered and defined separately. But the principal parts of the irregulur verbs are usuably inserted in their proper alphabetical places, with a simple cross-reference to the verl)s themselves. A similur course has been pursued in regard to the comparative and superlative degrees of many adjectives, and the irregular pluats of noms. The vocabulary, as a whole, though not constructed for any display of enumerated titles, will be found to be greaty inereased and enriched. It comprises an aggregate of mpward of 114,000 words.
V. The Scientific and Technicul Definitions have been earefully revised am claborated by very able gentlemen, and with the aid of the best authorities. Many of the articles, it is believed, will command contidence amb elicit commendation for their scientific value, while their brevity and plain langrage fit them for the use and instruction of all classes.
VI. The Collection of Synomyms, so earefully frepared by Irofessor Goutrich, has, with a few slight changes, been incorporated into the body of the work for greater facility of reference. The number of the worls thus defined and distinguished is far greater than the number of separate articles would seem to indicate. The meanings are thoronghly discriminated in every case, the words being thaced from their etymology, and explained by formal definitions, as well as illustrated hy contrasted examples of their various use. In addition, eopious lists of symonymons or interchangeable terms have been attached to most of the important words, for the convenience of teachers and inexperienced writers.
VII. The Pictorial Illustrations, more than three thonsand in number, have heen inserted in the boly of the work, for the greater convenience of those who consult it; but the ohvious advantages of a elassified arrangement have imbuced the publishers to repeat the greater part of them at the emb of the volume ; and to these are added manyothers, which, from their larger size or other canse, were not so well adlapted to the body of the work. It will be olserved that an entirely new selection of illustrations has been made for this edition, many being taken from original drawings, and the remainder chiefly from works of high authority in their respective departments. For the artistic beant of theso cuts, the work is indebted to Mr. Jony Anbmen, of Boston, who has a distinguished repmetation as an chgraver on wood. It will be remembered that ouly a partial sclection conth be made of ohjeets to be illustrated. Eien in illus.
trated works on Natural History, it is customary to represent only a limited number of objects; and, in a work like the present, a still smaller number of such illustrations could be admitted. The general aim has been to illustrate those objects of which a drawing would convey a better conception than a mere verbal description. Those who use the Dietionary will not fail to observe that, to many words which are not themselves illustrated, there are subjoined references to illustrations given in connection with other words; as, under Hithers, it is said, "[See Illust. of Morse.]"
VIII. The Toeabularies in the Appendix have been re-edited, or expressly prepared for this edition by able scholars, as will appear from the full account of the Vocabularies themselves, and of the researches and aims of the autisors in the special Introductions which accompany them. The first and most prominent, the "Vocabulary of the Names of Noted Fictitious Persons, Places, Etc.," by Mr. Wheeler, is a novel and appropriate accompaniment of an English Dictionary. It is the first attempt of the kind, at least in our language, and is valuable for its interesting gleanings fiom history and biography, as well as for its explanations of many obscure allusions in the best and most popular writers. The remaining Vocabularies are all the products of original and laborious research, or are trustworthy compilations from the best sources.
IX. The Promunciution of English words has been carefully attended to in this edition. The principles adopted are stated at length and fully illustrated in the article on the Principles of Pronunciation, which was originally prepared by Professor Goodrich, and has been elaborated by Mr. Wheeler, with suggestions from able scholars, who, as well as himself, have made a special study of English orthoëpy and the science of phonology. A more thoroughly practical and satisfactory treatment of the sulject, the Editor confidently believes, ean not be found in the language. The "Synopsis of Words Differently Pronomed by Different Orthoëpists" will be found to be a comprehensive, practical, and fully trustworthy exhibition of the various modes of promunciation given in the best English Dictionaries. The pronunciation of each word in the Dictionary is indicated by the marked or figured Key which is to be found at the bottom of the page. This Key has been remodeled and arranged with special reference to this edition, and contains some few characters additional to those of the Fey previously used. The number of characters now employed is thought to be as large as is desirable. To attempt more is to seem to promise more than it is practicable to perform, and is, besides, open to the objection that a complex notation would not be readily understood.
x. The Orthography. In this department no change has been made in the principles adopted and clearly set forth in the Revised Edition of 1847 , and so generally accepted by the American public. In a few classes of words the Dictionary recommends and follows the peculiar modes of spelling which Dr. Webster introduced for the sake of carrying out the acknowledged analogies of the language - modes of spelling, which, in every instance, had been previously suggested by distinguished English grammarians and writers on orthography, such as Lowth, Walker, dec., and the propriety of which has been recognized by Smart and other recent English lexicographers. Eut to remove every reasonable ground of complaint against the Dictionary in regard to this matter, an alternative orthography is now given in almost every case, the old style of spelling being subjoined to the reformed or new. In two or three instances it has been found that the forms introduced by Dr. Webster, or to which he lent his sanction, were based upon a mistaken etymology; and therefore these forms have been set aside, and the old spelling has been restered. Preceding this account are some Observations on the general subject of Orthography, with copious "Rules for Spelling Certain Classes of Words," prepared by Mr. Wright, followed by "A List of Words Spelled in Two or More Wars," compiled expressly for the present edition. These new features give this edition of the Dictionary a great superiority orer the former editions.

In conclusion, the Editor desires to express his thanks to all the persons who have assisted in the preparation of the present edition, for the fidelity and perseverance with which they have discharged their duties. It is to their industry, scholarship, and zeal, that the peculiar excellences of this edition are chiefly to be ascribed. Though the Editor is more sensible of its deficiencies than any other person can be, yet he does not hesitate to commend it to the public for the improvements which are due to the thorough research and careful attention which have been bestowed by his associates in preparing it. To them the public owe a debt of grateful appreciation, which, he believes, will be cheerfully discharged.

## NOAH PORTER.

## New Haver, Julu, 1864,

P.S. Inasmnch as with the progress of science, the inventions of art, and the freedom accorded to literature, new words gradually come into use and words already familiar are employed in new applications and significations, it is ineritablo that a supplement of new words and new meauings shonld occasionally be required for the dictionary of every living language. The materials for such a supplement have been slowly accumulated from many sources and at the suggestion and by the assistance of many friends of literature and science. These materials have been carefully revised and greatly enriched by the conscientious labours of Professor Franklin B. Dexter, of Yale College, and, as the result, a considerable addition of new words and significations is now presented to the public, together with a greatly enlarged and improved Biographical Dictionary, the work of Mr. Loomis J. Campbell, a careful and experienced student and labourer.- I. I.

Yale College, 1879.

# EDITOR'S PREFACE TO TIIE REVISED EDHION OF 184. 

Tie demand for Tife American Dictionimy of the Englisil Lavgeage has increased so rapidly within a few yeary past, that the publishers have felt the necessity of its being stereotyped, for the greater convenience of the public, in a single quarto volume. In deciding upon this measure, they were desirous that the work shouk be thoroughly revised anew, and that each department which it embraces should be brought down, as far as possible, to the latest adrances of science, literature, and the arts, at the present day. With this view, it was placed in the hands of the leer. Chauncey A. Goodrich, Professor in Yale College, as one of the members of Dr. Webster's famity, in the expectation of his oltaining such adlitiona! aid as might be necessary for the accomplishment of this design. The Editor has not acted, however, upou his own personal responsibility in exceuting this trust. He has, from time to time, haid open the sheets to the inspection of the other members of the fimily; and no important alterations have been made. especially in any of the leading characteristics of the work, except with the concurrence, or at the request, of 1)r. Webster's Jegal representatives. In laying before the public an clition thus prepared, the fruit of nearly three years of care and attention, the Editor will be expected to make some brief statement of the principles on which he las conducted the revision, and the result of his laloors, as exhibiten in the present volmare.

This work was first published, in two quarto volumes, in the year 1828 . At the expiration of twelve years, or in the years 1810-1, a second edition was publisheed by the Author, in two royal octavo wolumes. Of this he thas speaks in the Adrertisement prefixed: "The improvements in this eftition of the Anmicas Ductovalir consist chiefly in the addition of several thonsud words to the vocabulary, the divisiou of worls iuto syllables, amb the correction of definitions in several of the sciences, whelh are made conformathe to recent discoveries anul clasifitations. For the latter improvements, the Anthor is indelted chictly to Prolessor Terser, of the Medical College in New Haven. To these improvements may be added the introduction and explanation of many phrases from forcigun languace, frepuenty used ly Euglish authors, aud in conversation; and also of many foreign terans usel in books of musie." Ia conducting this revision, Dr. Webster was aded in some part of his lators ly his sim, Whana (i. Whastar, Eifor of New Haven; who, also, at a subsequent periot, prepared the revised Admemb, under the direction of his hather. The later improvements of the Anthor, down to the period of his death, are here inserted under their proper heads, from the manuseripts which he left. By these successive revisions, aut the one which hats now been made, nene mather, to tho amount of more than three hundred pages, has been auded to the work; all of which, by the use of a smatler type, and by careful compression, is now brought within the compass of this volume. Of the course pursued in the rerision it will now be proper brietly to speak.

In respect to the Etymologies, the Editor has not considered it as lying within his province to mako any matorial alterations. In a very few cases of obvious necessity, some slight change hat been mate. But the chice labor, in reference to this part of the work, has been bestowed on the ditient task of giving with accuracy the mumerous words from Oriental and foreign languages, which are nsed in tracing the origin of our own.

The chiel value of a dictionary consists in its Definitions; -in giving a dear, lull, and acemrato exhibition of all the varions shades of meaning which ledong, by estublishem usate, th the worde of at langulge. It is in thin respect, especially, that Dr. Webster's Dictionary has been generally considered suprion to every other, both of this country and of Leughand. To this point, therefore, the labors of the beditor have been manly dirveted. No efforts have been spared to obtain the most recent and caluable work, not only in leximgraphe, lat in the various departments of science and the arts embraced in the American Dictionary. As these suljectes are in $\Omega$ state of continnal progress, every important word, in its varions applications, has been diligenty examined mul compared wilh the statements mate on each topic, by the latest and most approsel nuthomites. Smarts binclish Dictionary, in the edition of 1816, has been carcfuly collated with this work, and alst the unfinished me [Cratis's], in a comrse of publication by Gibbert, so far as the nmabers have apparem. Remernee has hikewise constamby been made to

 lated with the corresponding portions of this Dietionary, us the starting-point, when necessary, al investigation in larger treatises. The Pemy Cyclopectia has heen consultent at wery strpe esperialty in matters of scione ; and the Bineyclopadia Americana (hased on hle German Conectestions-Lorikon) has been relied npon, partioularly on sulpects
 aries or vocabularics, confued to some single department, have also been collated with this work; and the ahfest treatises on important brauches of science and ant have been diligenty examined. In arednecture, the thief refianco has been phaced on the Oxford Glossary of Architecture (1815), and the Eacyelopedia of Arehiterture (18.t2), by (iwilt, author of the articles on this subject in Brame's Encyclopedia. In arrivulture, othmson's Farmer's Pacychedia (18:11), and Garduer's l'amer's Dictionary (15:6), have been chiclly usel. In general antipuitien, the large treatioe of

Fosbroke has been frequently consulted, while in classical antiquities the prineipal reliance has been placed on the recent Dictionary of Smith (1846), as a work of the highest authority. In respect to the antiquities of the chnrch, the elaborate work of Coleman (18.11) has been frequently consulted; and Hook's Chureh Dietionary (1844) has been collated throughout, with reference to the rites, ceremonies, vestments, \&e., of the chureh of England, and also of the Roman Catholic: and Greek clurches. In hotans. use las principally been made of the writings of Lindley and Loulou. In matural history, Partington's British Cyclopedia of Natural History (1835-7), and Jardine's Naturalist's Library ( $1834-43$ ), have been much consulted, in connection with the articles on these subjects in the Penny Cyclopedia and simila works. In geology, mineralogy, and some associated branches of natural history, Humble's Dictionary of terms in these departments (1810) has been compared with this work throughout. In respect to mereantile suhjects, bauking, coins, weights, measures, ©e., McCulloch's Commercial Dictionary (18t5) has been collated at every step, as the standard work on these suljecte. In manufactnres and the arts, In. Ure's Dictionary of Mannfactures, Arts, and Mines, with its Supplement ( 1815 ), has been relied upon as of the highest anthority. In cugineering and mechanical philosophy, Hebert's Eugineer's and Mechanic's Cyelopedia (1st 2 ) has been carefully collated, with a constant reference to the more popular and recent Dictionaries of Francis, Grier, and Buehanan, in the editions of 1816 . In seamanship, tine Dictionary of Marine 'Terms, in Lieutenant 'Totten's Naval Text-Book (1841), has been taken as a guide. In military affairs, the Dictionary of Campbell (1814) has been followed, in connection with the more extented articles contained in Brande and the Penny Cyelopedia, on the kindred topies. In the fine arts, much mse las been made of the Dictionary of Elmes. In domestic economy, the Encyelopedia of Webster and Parkes on this suhject (1844) has furnished many important statements, on a great variety of topics, presented for the first time in a scientific form; and to this has been added Cooley's Cyclopedia of Practical Receipts (1846), as exhibiting much collateral information in respect to the arts, manufactures, and trades. Such, in general, are the athorities which have been relied on in this revision.

But it is obviously impossible for any one mind to embrace with accuracy all the various departments of knowl edge which are now brought within the compass of a dietionary. Hence arise most of the errors and inconsistencies which abound in works of this kind. To aroid these as far as possible, especially in matters of seience, the Editor at first made an arrangement with Dr. Jnmes G. Periciril, who had rendered important assistance to Dr. Webster in the edition of 1828 , to take the entire charge of revising the scientifie artieles embraced in this work. This revision, however, owing to causes beyond the control of either party, was extended to but little more than two letters of the alphabet; and the Eflitor then obtained the assistance of his associates in oflice, and of other gentlemen in varions professional employments. To these he would now return his acknowledgments for the aid they have afforded. The articies on law have been collated with Blackstone, and with Bouviers Law Dietionary, by the Ion. Eliztri Goodmon, formerly Professor of Law in Yale College, and the errors liscovered, which were few in number, have been carefully corrected. The departments of eeclesiastical history and ancient philosophy hare been thoroughly revised by the Rer. James Memock, D. D., late Professor in the Andover 'Theological seminary, who has furnished. in many instances, new and valuable definitions. The terms in chemistry have been submitted to Professor Simbiman, of Yale College; and whatever changes were requisite in the explanations lave been made under his direction. In the departments of botany, anatomy, physiology, medicine, and some branches of matural history, Dr. Webster received assistance, in the revision of 1840 , as mentioned above, from Dr. Whlman Telly, late Professor in the Medical Institution of Yale College. Still further aid has been reccived from the same souree in the present revision, and much of the accuraey of this work, in these branches, will be found owing to the valuable assistance he has thus afforded. On topics connected with Oriental literature, aid has frequently been obtained from Professor Gibss, of Yale College. A part of the articles on astronomy, meteorology, and natural philosophy, in the edition of 1828 , passed under the rerision of Professor Olnsted, of Yale College. This revision las now been extended to all the articles on these subjects throughout the work, and new definitions lave been furnished in numerous instances. The definitions in mathematics, after having been compared with those given in the Dictionaries of Hutton and of Barlow, have been submitted to I'rofessor Stanler, of lale College, and the alterations have, in all cases, been made under his direetion. In the seiences of geolory and mineralogy, a thorongh revision of the whole volume has been made by Janes D. Disa, Esq., Gcologist and Mineralogist of the C'nited States Exploring Expedition, and associate editor of the American Journal of Science and Arts, to whom the Editor is likewise indebted for assistance on various other subjects, which has greatly enhanced the value of the work. In practical astronomy, and the seience of entomology, aid has been frequently received from Edwand C. Herrick, Esq., Librarian of Vale College. The articles on painting and the fine arts have, to a great extent, passed under the inspection of Nithiniel Jocelix, Esq., Painter, of New Haven, and new definitions have in many eases been furnished.

A correspondence has likewise been carried on with literary friends in England, and especially witl one of the contributors to the Penny Cyclopedia, with a riew to obtain information on certain points, in respect to which nothing definite could be learned from any books within the reach of the Editor. Extended lists of words have been transmitted for examination, and returned with ample notes and explanations. Much obseurity has thus been remored in respeet to the use of terms which have a peeuliar sense in England, especially some of frequent oceurrence at the universities, in the circles of trade, and in the familiar intercourse of life. To the friends who have given their assistance in these various departments the Editor would return his cordial thanks. Whaterer improvement the work may have gained from this revision, in respect to clearness, accuracy, and fullness of definition, will be found owing, in a great degree, to the aid which they have thus aftorded.

With regard to the insertion of nev words, the Editor has felt mueh hesitation and cmbarrassment. Some thonsands have been added in the course of this revision, and the number might have been swelled to many thousands more, without the slightest difficulty. There is, at the present day, especially in England, a boldness of innovation on this subject which amounts to absolute licentionsness. A hasty introduction into our dietionaries, of new terms, under such circumstances, is greatly to be deprecated. Our vocabulary is already encumbered with a multitude of words, which lave never formed a permanent part of English literatire, and it is a scrious eril to add to their number. Nothing, on the contrary, is so much needed as a thorough expurgation of our dictionaries in this respect - tho
rejection of many thousands of words, which may properly find a place in the glossaries of antiquarians, as a curions exhibition of what has been proposed, but never adopted, as a pat of our lauguage, hut which, for that reason, cam have no claim to stand in a dictionary desigued for general use. All words, indeed, which are uecessary to an understanding of our great writers, such as Bacon, Speuser, Shakespeare, \&e., ought, though now obsolete, to be carefully retained; and in the present revision a considerable number of this class have been introduced for the first time. Other words have likewise been admitted, to a limited extent, namely, the lamiliar terms of common life in Enerland, which have been much used of 'ate by popular writers in Great Britain. Many of these need to be explained for the benefit of readers in this sountry; and, if maked as "familiar," "colloquial," or " low," according to their thue character, they may be safely inserted in our dictionaries, and are cntitled to a place there, as forming a constituent part of our written and spoken language. One of the most ditlicult questions on this subject relates to the introduction of technical and scientifie terms. Most of our general dictionaries are, at present, without any plan as to the extent and proportion in which such words should be inserted; nor ean they ever be reduced to order until eatele department is revised by men of science who are intimately aequainted with the subjects, and who are competent to decide what terms ought to be admitted iuto a general dictionary, and what terms should be reserved for speciel dietionaries devoted to distinct branches of science. Something of this kiud, on a limited seale, has been attempted in the progress of this revision. Lists of words have been obtained from the gentlemen mentioned above, which might properly be inserted in this rolume; and very few terms of this class have been admitted exepert under their direction. In accordance with their adrice, a small number have been exchuded; but in this respect the Editor has not felt at liberty to carry out his views in their full extent.

In respect to Anericanisms, properly so called, it is known to those who are conversant with the subjeet, that they are less numerous than has been generally supposed. Must of those familiar words, especially of our older States, which hase been considered as peeuliar to our country, were brought by our ancestors from Great britain, and are still in constant use there as local terms. The recent insestigatious of Forby, Holloway, and Ilalliwell have thrown much light on this subject; and the names of these authors are, therefore, freguently placed under the words in question, to indicate their origin and their present use in Englaud. Notes have also been added to some words whel are peculiar to our conntry; but their mumber is comparatively smath.

In reference to Orthography, some important alteratious have been made, but in strict conformity, it is believel, with the Author's principles on this subject. The changes in our orthography recommended by Dr. Webster are of two distinct kinds, and rest on very different grounds. These it maty be proper for a moment to consider. His main principle was, that the tendencies of our langucege to greater simplicity and broader analogirs ought to be watchel and cherished with the utmost care. He fich, therelore, that whenever a movement toward wider analogies atod more general rules had adranced so far as to leave but few exceptions to impede its progress, those execptions ought to be set aside at once, and the amalogy rendered complete. On this ground, he rejected the u from such words aty fovour, labou, \&e. Of these we have a large number, which came to us, in most eases, from Latin terminations in or, through the Noman French, but cucumbered with the silent $u$, as in emperour, authour, editour, de. From this eutire class, exeept about twenty words, the $u$ has been gradually dropped; and in respect to these, scarcely any two persons can be found, however strenuous for retaining it, who are in practice consistent with each other, or with themselves, as to the words in which this letter is used. In fact, we have reachel a point where, males we take Webster and the dictionaries which agree with him as our guide, we have mostandard on the subject; for dohnson, Walker, and others retain the $u$ in numerons words into which no one would think of introducing it at the present day. D'ublic eonvenience, therefore, demands that we do at once what must ultimately be done. No one cam believe that the progress of our language will be arrested on this subject. The $u$ will speedily be omitted in all words of this dass, unless, from the sacredness of its associations, it be retanel in Saviour, which may stand for at time as a solitnry exception. Nor is it Dr. Webster who is the innowator in this ease, but the English mind, which has for two cellturies been throwing off a useless encumbrance, and moving steadily on toward greater simplicity in the structure of our language. Such, too, is the ease with certain terminations in re, prouounced like ar; ats, fentre, metre. de. We have numerous words of this class, derived from the French, all of which orimimally embed in exp; ats, cider (evere), chamber (chambre), \&e. These have been gradually conformed to the Fingish spefling atud prommelation, till fore number in re is reduced to not far from twenty words, with that derivatives ; and in respect them abo the process is still going on. Ceuter is, to a considerable extent, the spelling of the best mathemationl writers. Matre is the word given by Walker in his Jhyming Dictionary, from a semse of the grose inconsistenty of altaching to this woml and its derivative, diameter, a diflerent temmation. Others ate gradually underghing the same dange. Dr. Websate proposes, therefore, to complete the analoge at once, and conform the spelline wh the tew that remati to the genemal
 be mispronounced, and may therefore be sullered to stand as messery exceptons. Shother departure from the principles of English orthography which Dr. Webster has endeatored to correet, is une that was puinterl omt by Walker, in very emphatic terms, nearly fifly years ago. The principle in puestion is this, - that, in adding to at worl the

 place in the words worshipping, cousctling, de., which, having the mecent on the tirst sybuble, onght to be writlen avorshiping, counseling. An ignorance of this rute has led many to write higothor. for higoted: mul from this spelling

 mine; and unless $l$ can give a better pleathan any other better of the abphath for being donbled in this situation, I must, in the style of Lucian, in his trial of the letter $T$, wechere for an expmoion." 'These were the delibernte nod latest opinions of Wakker. If he had taken the trouble to cury them into his vocabulary, insteat of relying on of mere remurk of this kind for the correction of tho ertor, - if he liad simply stated, under nbout forty verbs, how
the participle should be spelt (for he dil not give pariciples in his Dictionary), and had altered six or eight words, as uorshipper into worshiper, traveller into traveler, \&e., the error would probably, by this time, have heen wholly eradicated from our orthography, and Jr. Webster would lave escaped much ignorant vituperation for following in the footsteps of Walker aml of Lowth. Walker also says in his Aphorisms, "Why should we not write dullness, fullness, shillful, willful, as well as stiffness and grufincss?" The principles of our language plainly require us to do so ; and Dr. Webster felt that the change might easily be made. The work which need to be retuced to this analogy are only about cight in number, inchding installment and inthollment, which, if spelt with a single l, are liable to be mispronounced instabent, \&e. Again, the words expense, license, recompense, which formerly had a $c$ in the last sylable, have now taken an $s$, beeatuse the latter consouant is the only one used in the derivatives; as, expensive, \&e. A similar change is uecled in only three words more to complete the aualogy, namely, defense, offense, and pretense; and these Dr. Webster has changed. It is sometimes asked, "Why not change fence also:" For the simple reason, that its derivatives are spelt with a c, as fencet, fenciny; aml the word, therefore, stands regularly with others of its own class. Finally, Jr. Webster proposes to drop the it in mould and moult, because it has been dropped from gotd, and all other words of the same ending. Sueh are the principal ehanges, under this head, introduced by Dr: Webster into his Dictionary. In the present edition, the words are spelt in both ways, for the convenience of the public, exeept in eases where this seemed to le monecessary, or was found to be inconvenient. These changes, consitering the diffieulty that ahway behors to such it subject, have met with far more favor from the public than waz reasombly to be expected. Most of them have been extensively abopted in our combry. They are gaining ground daily, as the retsons hy which they are supported are more generally understood; amd it is contidently believed that, being foumbed in establi-lied analogies, and intended merely to repress irregularities and remove petty exceptions, they must ultimately prevail.

The other class of changes mentionet above rests on a different bisin - that of Etymology. Theso will be estimated very differently, according to the acquaintance of diflerent persons with the languages from which the words are derived. When Dr. Webster substituted bridegoom for bridegroom, fether for feather, \&e., the German crities highly applanded the elange. They predicted its specdy aud universal reception, because similar improvements, on a much broader scale, had beeu easily made in their laguage. Dut br. Webster found the ease to be widely diflerent among us. After an experiment of twelve years, he restored the ohl orthography to a considerable mumber of suels words. In the present edition, it is restored in respect to nearly all that remain, from the full conviction, that, however desirable these changes may be, in themselves considered, as they do not relate to the general analogics of the language, and ean not be duly appreciated by the body of the people, they will never be geaerally receivel.

On the subject of Prominciution, much labor has been bestowed in the progress of this revision. A eareful comparison has been made with the latest monthorities, and wherever changes seemed desirable, mal could be made in consistency with the Author's principles, they have been here introducet. The Key to l'rommeriation has been somewhat enlarged, and placed at the hottom of each page, for greater case of reference, and the pointed letters have been nsed to a still greater extent. Many thomand worls have been re-spelled, and no etlorts have been spared to render the work, in all respects, a complete Pronouncing Dictionary. In the progress of these labors, the Editor has been frequently struck with the wistom of Dr. Webster, in not attempting too much as to marking the promunciation. Most of the later orthoüpists, as Knowles, Smart, \&e., lave made their system of notation so extensive and complicated, and have aimed to exhibit so many nice shades of distinction, as in many eases to perplex, rather than aid.

The Publishers, being desirous to make his, in ath respects, a complete work of reference, liave introduced, at the close of the volume, a list of Greek and Latin Proper Names, with their prommeiation, prepared by Professor Thacher, of Yale College; a list of Seripture Proper Names, preparet by Prolessor Porter, of Yale College; and a Pronouncing Yocabulary of Modern Geographical Names, prepared also under the superintendence of I'ofessor P'orter. Of these a full accomnt will be fomnd in the several prefaces by which they are accompanied.

In conclusion, the Editor would acknowledge his obligations to the gentlemen who lave aided him for more than two years in these labors - Mr. Samel W. Bamacm, M. A., of Yale Cullege, aml Willan G. Webster, Esq., of New IIaren, The intimate acquaintance of the latter with his father's riews has made his counsel and co-operation of great value in the progress of this revision.
'To the orerseers of the mechanical execution of this work, at the bostos Tyme and Stereotype Focrame, the Editor would likewise make his acknowledgments, fon many valuable suggestions, during the progress of the revision, and for the watehful care and assiduity with which they have performed the difficult task of giviag aceuracy to the details of this volume.

New ILaren. Septemter, 1847.
Note- - Among the sources from which rords not in former editions have been derived, mention should be made of a eatalogue of between five and six thousand, furnished by President Alles, late of Bowdoin College, which were collected by him in the course of his reading, during a period of forty years, from seperat hundred rolumes of gencral literature, and given for the most part with authorities anmexed. This eatalogue, added to a similar list formerly furnished to Dr. Webster, makes an aggregate of some thousands of new words plaeed in the hands of the Author and Proprietors of this Dictionery, thus contributing materials for its improvement.

## AUTIIOR'S PREFACE TO TILE EDITION OF 1828.

In the year 1783, just at the close of the Revolution, I published an elementary book for facilitating the aequisition of our vernacular tongue, and for correcting a vicions pronnciation which prevailed extensively anong the common people of this conntry. Soon after the publication of that work, - I believe in the following year, - llat learned amt respectable scholar, the Rev. Dr. Goodricit, of Durlam, one of the trustees of Y:le College, suggested to me the pro pricty and expedicney of my compiling a Dictionary which should complete a systom for the instruction of the citizen; of this comntry in the language. At that time, I could not indalge the thought, much less the hope, of undertaking, such a work, as I was neither qualified by researeh, nor had I the means of support, during the exceution of the work, had I been disposed to undertake it. For many years, therefore, though I considered such a work as very desirable, yet it appeared to me impracticable, as I was under the necessity of devoting my time to other occurations for ubtaining subsistence.

About thirty-five years ago, I began to think of attempting the compilation of a Dictionary. I was induced to this undertaking, not more by the suggestion of fricmets, than ly my own experience of the want of such a work while reading modern books of science. In this pursuit I found almost insuperable ditlicultics, from the want of a dictionary for explaining many new words which recent discoveries in the physieal seiences had introtuced into use. To remedy this defect in part, I published my Compendious Dictioncory is 1806 , and soon after made preparations for undertaking a larger work.

My original design did not extend to an investigation of the origin and progress of our language, much less of other languages. I limited my views to the correcting of ecrtain errors in the best Vinglisl dietionaries, and to the supplying of words in which they are deficient. But after writing through two letters of the alphabet, I determined to change my plan. If found myscli' embarrassed, at every step, for want of a knowledge of the origin of words, which Jonvson, lBaley, Junius, Shinneh, and some oiher authors, do not atlurd the means of obtaining. Then, laying aside my manuscripts, and all hooks treating of language, execpt lexicons and lictionaries, I endeavored, hy a diligent comparison of words having the same or cognate radieal letters, in about twenty langnages, to oltain a more correct knowledge of the primary sense of original words, of the affinities between the English and many other languages, and thus to enable mysclf to trace words to their source.

I had not pursuce this course more than thre or four years before I discovered that I had to mulearn a great deal that I had spent years in learing, ant that it was necessary for me to go back to the first rudiments of a branch of erudition which I had before entivated, as I had supposed, with suceess.

I spent ten years in this comparison of radical words, and in forming a symopsis of the principel Words in tacenty Languages, arranged in Classes meder their primary Istements or Letters. The resuit has leen to open what are to me new views of language, and to mufold what appear to be the gemine prineiples on which these languages are constructed.

After eompleting this Synopsis, I proceened to correct what I had written of the Dictionary, and to complete the remaining part of the work. lsut before I hat finished it, I determined on a voyage 10 binope, with the view of obtaining some books and some assistance which I wanted, of learning the real state of the promuciation of our language in England, as well as the general state of philology in that country, and of attempting to hing :hont some agreement or coincidence of opinions in regard to musetted paints in prommeiation and grammatieal construetion. In some of these objects, I failed; in othere, my designs were answered.

It is not only important, but in a degree necessimy, that the people of this conntry should have an Americur Dictionary of the English Lengmente; for, althongh the horly of the langnage is the same as in England, and it is desirable to perpetuate that sameness, yet some dillerences must exist. Jamgnage is the expression of ideas; amb if the people of one comntry can not preserve an identity of ideas, they can not retain an illentity of language. Now, an identity of ideas depends materially upon a sameness of things or oljects with which the preple of the two commtries are conversant. But in no two portions of the earth, remote from each other, ean such identity be fumbl. liven physieal oljeets must be different. But the principal differences between the people of this commer and of :lll of hems arise from different forms of government, diflerent laws, institutions, and customs. The the practice of henrling and henting, the institution of heredely, and the feuted system of England, originated terms which formed, and some of which now form, a necessary part of the language of that country; but, in the Whited states, many of these temus are no part of our present language, and they can not be, for the things which the express do not exist in this comery: They eon be known to us only as obsolete or as foreign worls. On the other hand, the institutions in this country which are new and peculiar give rise to new terms, or to new applications of ohe terms, minnwn to the people of Englant, which can not be explainet hy them, and which will not be insertel in their dictionaries, muless

 not belonging to the language of England, or they are applied to things in this commtry which do not exist in that. No person in this comntry will be satisfied with the English definitions of the words con!mess, semutc, and assembly, court, \&o.; for although these are words used in England, yet they are appliet in this combtry to express ideas which they do not express in that conntry. With our present constitutions of government, eschenf can never have its fendal sense in the United States.

But this is not all. In many cases, the nature of om governments and of our civil institutions requires an eppro. briate language in the definition of words, even when the words express the samo thing as in England. 'Thets the

English dictionaries inform us that a justice is one deputed by the king to do right by way of judgment; he is a lord by his office; justices of the peace are appointed by the King's commission - language which is inaccurate in respect to this ofticer in the United States. So constitutionally is defined, by Cuamers, legally; but in this comitry the distinction between constitution and law requires a different definition. In the United States, a plantution is a very different thing from what it is in England. The word marshul, in this country, has one important application unknown in England, or in Europe.

A great number of words in our language require to be alefined in a plraseology accommodated to the condition and institutions of the people in these States, and the people of England innst look to an Americum Dictionury for a correct understanding of such terms.

The necessity, therefore, of a dictionary suited to the people of the United States is obvious; and I should supp pose that, this fact being admitted, there could be no difference of opinion as to the time when such a work ought to be substituted for English dictionaries.

There are many other considerations of a publie nature which serve to justify this attempt to furnish an American work which shall be a guide to the youth of the United States. Most of these are too obrious to vequire illustration.

One consideration, however, which is dictated by my own feelings, but which, I trust, will meet with approbation in correspondent feelings in my fellow-eitizens, ought not to be passed in silence. It is this: "The chief glory of a mation," says Dr. Jonrson, "arises from its authors." With this opinion deeply impressed on my mind, I have the same ambition which actuated that great man when he expressed a wish to give celebrity to Bacos, to Ilooker, to Miltox, and to Boyle.

I do not, imeed, expect to add celebrity to the names of Franklin, Wasmington, Apami, Jay, Madison, Mafshall, Ramsay, Dwight, Smith, Trembula, Mhmiton, Belivar, Ames, Mason, Fiext, Mare, Silmman, Cleavelavd, Walsh, Irving, and many other Americans distinguished by their writings or by their science; but it is with pride and satistaction that I can place them, as authoritics, on the same page with those of Boxle, Ifooker, Mitos, Dryder, Addison, Ray, Mileer, Cuwper, Dhyy, Thomsox, and Jameson.

A life devoted to reading and to an investigation of the origin and principles of our vernacular language, and especially a partieular examination of the best Englis! writers, with a view to al comparison of their style and phraseology with those of the best American writers, and with our colloquial usage, enables me to affirm, with contidence, that the genuine English idiom is ats well preserved by the ummixed English of this country as it is by the best Enylish writers. . . It is true that many of our writers liave negleeted to cultivate taste and the embelishments of style; but even these have written the language in its genuine iliom. In this respect, Franklin and Wasmagton, whose language is their hereditary mother-tongue, mosophistieated by modern gramuar, present as pure models of genuine English as Abdisoy or Swift. But I may go further, and athrm, with truth, that our country has produced some of the best models of composition. The style of President Sumpir of the authors of the Federabist; of Mr. Anes; of Dr. Mason; of Mr. Marper; of Chancellor Kent; [the prose] of Mr. Bahlow; of Dr. Channing; of Wasurgaton Iavivg; of the legal decisions of the Supreme Court of the Cnited States; of the reports of legal decisions in some of the particular States; and many other writings, - in purity, in elegance, and in technical precision, is equaled only by that of the best British authors, and surpassed by that of no English compositions of a similar kind.

The United States commenced their existence under circumstances wholly novel and mexampled in the history of nations. They commenced with civilization, with learning, with science, with constitutions of free government, and with that best gift of God to man, the Christian religion. Their population is now equal to that of England ; in arts and sciences, our citizens are very little behind the most enlightened people on earth - in some respects they have no superiors; and our language, within two centuries, will be spoken by more people in this country than any other language on earth, except the Chinese, in Asia - and even that may not be an exception.

It has been my aim in this work, now offered to my fellow-citizens, to ascertain the true priciples of the langnage, in its orthography and structure ; to purify it from some palpable errors, and reduce the number of its anomalies, thus giving it more regularity and consistency in its forms, both of words and sentences; and in this manner to furnish a standard of our vernacular tongue, which we shall not be ashamed to bequeath to fice hundred millions of people, who are destined to occupy, and I hope to adom, the vast territory within our jurisdiction.

If the language can be improved in regularity, so as to be more easily acquired by our own citizens and by forcigners, and thus be rendered a more useful instrument for the propagation of science, arts, civilization, and Christianity; if it can be rescned from the mischievous influence of sciolists, and that dabbling spirit of innovation which is perpetually disturbing its settled usages and filling it with anomalies; ift, in short, our vernacular language can be redeemed from corruptions, and our philology and literature firm degradation, - it would be a source of great satisfiction to me to be one among the instruments of promoting these valuable objects. If this olject can not be effected, and my wishes and hopes are to be frnstrated, my labor will be lost, and this work must sink into oblivion.

This Dictionary, like all others of the kind, must be left, in some degree, imperfect; for what individual is competent to trace to their source, and define in all their rarious applications, popular, scientific, and technical, seventy or eighty thousand words! It satisfies my mind that I have done all that my health, my talents, and my pecuniary means would enable me to accomplish. I present it to my fellow-citizens, not with frigh indifference, but with my ardent wishes for their improvement and their happiness; and for the continued increase of the wealth, the learning, the moral and religious elevation of character, and the glory, of my country.

To that great and benerolent Being, who, during the preparation of this work, has sustained a feeble constitution, amidst obstacles and toils, disappointments, infirmities, and depression, - who has borne me and my manuscripts in safety across the Atlantic, and given me strength and resolution to bring the work to a close, - I would present the tribute of my most grateful acknowledgments. And if the talent which he intrusted to my care has not been put to the most profitable use in his service, I hope it has not been "kept laid up in a napkin," and that any misapplication of it may be gracionsly forgiven.

New Haven, 1828.

# MEMOIR OF NOAII WEBSTER． 

BY゙ CHAUNCLE A．GOODRICH，D．D．

IT is natural for those who make frequent use of a work like this，to desire some knowledge of the autbor＇s life，and especially of that long course of intellectual labor by which he contributed so largely to the literary treasures of our language．To gratify this desire is the object of the present Memoir． A brief outline will be given of the leading occurrences of bis life，with par－ ticular reference to the oceasions which ealled forth the principal productions of his pen．The materials of this sketch were obtained from Dr．W＂ebster himself，about ten years before his death，and were first used in the prepara－ tion of a memoir inserted in the＂National Portrait Gallery of Distinguished Americans，＂in the year 1833．That memoir has been re－written，with large additions，and is now brought down to the period of the author＇s death．

Noair Wenster was born in IIarford，Connecticut，about three miles from the eenter of the eity，on the l6th of October，1758．His father was a respectable farmer and justice of the peace，and was a descendant，in the fourth generation，of John Webster，one of the first settlers of Ilartford， who was a magistrate，or member of the colonial council from its first formation，and，at a subsequent period，governor of Cennecticut．II mother was a deseendant of William Bradford，the second governor of the Plymouth colony．The family was remarkable for longevity．Ilis father died at the advanced age of nearly ninety－two．IIc and one of his brothers lived considerably beyond the age of eighty．Iis remaining brother died in his eighticth year ；and of his two sisters，one was advanced beyond seventy，and the other bad nearly reached the same age，at the period of their death．

Mr．Webster commenced the study of the elassics，in tho year 17゙2，under the instruction of the elergrman of the parish，the Lev，Nathan I＇erkins，D．1）．， and in $177 \pm$ was admitted a member of Vale College．The war of the revo－ lution，commencing the next year，interrupted the regular attendance of the students on their usual exereises，and deprived them of no small part of the advantages of a collegiate course of instruetion．In his Junior year， when the western part of New England was thrown into confusion by Gen－ eral Burgoyne＇s expedition from Camada，Mr．Webster volunteered his services under the command of his father，who was eaptain in the alarm Kist，a body comprising those of the militia who were above forty－five years of age，and who were called into the ficld only on pressing energencies． In that eampaign，all the males of the family，four in number，were in the army at the same time．Notwithstanding the interruption of his studics by these eauses，Mr．Weluster graduated with reputation in 1788.

The elass to which he belonged produeed an unusual number of men who were afterward distinguished in publie life．Among these may be mentioned Joel Barlow，author of the Columbiad，and ninister of the United States to the court of Franee ；Oliver Wolcott，seeretary of the treasury of the United States under the administration of Washington，and subsequently governor of the State of Connecticut；Uriah Tracy，a distinguished member of the Senate of the United States；Stephen Jacob，chicf justice，and Noah Smith，associate judge，of the Supreme Come of Vermont；Zephaniah Swift，chicf justice，and $A$ shur Miller，associate judge，of the Supreme Court of Connecticut；besides a number of others，who were cither mem－ hers of Congress or among the leaders of our great political partics nt the commencement of the present century．

The period at which Mr．Webster entered upon life was an unpropitious one for a young man to be east upon the world without property．The eountry was impoverished by the war to a degree of which it is diflicult，at the present day，to form any just conception；there was no prospect of peace；the issue of the contest was felt，by the most sanguine，to be ex－ tremely doubeful；and the practice of the law，which Mr．Webster intended to pursue，was in a great measure set aside by the general ealamity．It was under these cireumstances that，on his return from the Commerecenaent when he graduated，his father gave him an eight dollar bill of the Comtimental
eurrency（then worth about four dollars in silver），and told him that he must thenceforth rely on his own exertions for support．As a means of jmme－ diate subsistence，he resorted to the instruetion of a school，and，during the summer of 1769 ，resided at IIartiord，Connecticut，in the family of Mr．， afterwards Chief Justice，Ellsworth．An intimate friendship was thus formed between these two gentlemen，which was interrupted only by the death of the chief justice．
Not having the means of ohtaining a regular education for the bar，Mr． Webster，at the suggestion of a distinguished counselor of his aequaint－ ance，determined to pursue the study of the law in the intervals of his regular employment，without the aid of an instructor；and，having presented him－ self for examination，at the expiration of two years，was admitted to prace tice in the year 1781 ．As he had no encouragement to open an office，in the existing state of the country，he resumed the business of instruction， and taught a classical sehool，in 1752 ，at Goshen，in Orange county，New Fork．Here，in a desponding state of mind，ereated by the unsettled con－ dition of things at the close of the war，and the gloomy prospects for business，he undertook an employment which gave a complexion to his whole future life．This was the compilation of books for the instruction of youth in sehools．Having prepared the first draught of an elementary treatise of this kind，he made a journey to Philadelphia in the autumn of the same year，and，after exhibiting a specimen of the work to several members of Congress，among whom was Mr．Madison，and to the Rer． S．S．Smith，D．D．，at that time a professor，and afterward president，of the college at I＇rinceton，he was encouraged by their approbation to prose－ cute his design．Aceordingly，in the winter following，he revised what he had written，aud，leaving Goshen in 178．3，he returned to IIartford，where he published his＂F゙irst I＇art of a Grammatical Institute of the Einglish Language．＂The second and third parts were published in the years ims－ mediatcly following．These works，comprising a Spelling IBook，an English Grammar，and a compilation for reading，were the first books of the kind published in the United States．They were gradually introduced into most of the schools of our ccuntry；and to so great an extent has the Spelling book been used，that，during the twenty years in which he was employed in compiling his American Dictionary，the entire support of his family was derived from the profits of this work，at a premium for copyright of less than a eent a copy．About twenty－four millions of this book have been published，down to the present year， 1817 ，in the different forms whech it assumed under the revision of the author；and its popularity has gone on eontinually increasing．The demand for some years past has averaged about one million eopies a year．To its influenec，probably，more than th any other eause，are we indebted for that remarkable unformity of proe nunciation in our country，which is so often apoken of with surprise by Einglish travelers．

In contering thus carly on his literary earecr，Mr．Webster did not contine himself to the publication of his own works．At a period when nothing had as yet been done to perpetuate the memorials of omr carly history，ho led the way，in this important branch of literary effort，by the publication of that highly valuable and eharacteristic work，Governor Winthrop．s Journal Ifaving learm that a manuscript copy was in possession of Governor Trum bull，of Comecticut，he caused it tu be transeribed at his own eapense，by the governor＇s private seeretary，and risticel more than the amount of his whole propeaty in its publication．Tho sale never remunerated lim for the expenses thus incurred．
At the period of Mr．Welsster＇s return to llartford，in 1783，the state was agitated by violent dissensions on the subject of a grant，made by Congress to the army，of half pay for life，which was afterward commuted for a grant of full pay for five years beyond their term of service．To this grant it was strongly objecled，that，if the army had suffered by the redueed value of tho
bills in which they were paide, the country at large had sustained an equal loss by the depreciation of the currency, and by other eauses. So strong was the excitement on this subject, that public meetings were held throughout the state, to prevent the laws of Congress from being carried into effeet; and at length a convention met at Middletown with the same desigu, at which iwo thirds of the towns in Connectient were represented. In this state of things, Mr. Webster, though only twenty-five years of age, came forward to vindicate the measures of Congress, and wrote a scries of papers on the subject, under the signature of Hovorits, which were published in the Connecticut Courant, and read extensively throughout the state. The offect was great. At the next election, in April, 1784, a large majority of the legislature were supporters of Congress in their measures. So highly were Mr. Webster's services appreciated on this oceasion, that he reccived the thanks of Governor Trumbull in person, and was publiely declared by a member of the council, to have "done more to allay popular discontent, and support the authority of Congress at this crisis, than any other man."
These occurrences in his native state, together with the distress and stag. nation of business in the whole country, resulting from the want of power in Congress to carry its measures into effect, and to secure to the people the benefits of a stable governument, conrinced Mr. Webster that the old Coufederation, after the dangers of the war were past, was utterly inadequate to the necessities of the people. If thereforc published a pamphlet, in the winter of 175:-5, entitled "Shetches of American Policy," in which, after treating of the general priuciples of government, he endeavored to prove that it was absolutely necessary, for the welfare and safety of the United States, to establish a new system of government, rehich showld act not on the states, but directly on indieiduals, and rest in Congress full poicer to carry its laves into effect. Being on a journey to the Southern States, in May, 1785, he went to Mount Vcrnon, and presented a cony of this pamphlet to General Washington. It contained, the writer believes, the first distinet proposal, made through the medium of the press, for a netw constitution of the United States.
One object of Mr. Webster's journey to the south was, to petition the state legislatures for the enaetment of a law securing to authers an exelusive right to the nublication of their writings. In this he suceceded to a considerable extent; and the public atteution was thus called to a provision for the support of American literature, which was rendered more effectual by a general copyright law, enacted by Congress soou after the formation of our government. At a much later period (in the years 1830-31), Mr. Webster passed a winter at Wiashington, with the siugle view of endeavoring to procure an alteration of the existing law, which should estend the term of copyright, and thus give a more ample reward to the labors of our artists and literary men. In this design he succecded; and an act was passed more liberal in its provisions than the former law, though lcss so than the laws of some European governments on this subject.
On his return from the south, Mr. Webster spent the summer of 1785 at Baltimore, and employed his time in preparing a course of lectures on the English language, which were delivered, during the year 1756 , in the prineipal Atlantic eities, and were published in 1789, in an oetavo volume, with the title of "Dissertations on the English Language."
The year 1787 was spent by Mr. Welster at Philadelphia, as superintendent of an Episcopal acadeny. The eonvention which framed the present constitution of the United States were in session at Philadelphia during a part of this year; and when their labors were closed, Mr. Webster was solicited by Mr. Fitzsimmons, one of the members, to give the aid of his pen in recommending the new system of government to the people. 1fe accoroingly wrote a pamphlet on this subject, entitled an "Examination of the Leading Principles of the Federal Constituction."
In 1788, Mr. Webster attempted to establish a periodical in New York, and for one year published the "Anerican Magazine," which, however, failed of success; as did also an attempt to combine the efforts of other gentlemen in a similar undertaking. The country was not yet prepared for such a work.
In 1789, when the prospects of busincss became more encouraging, after the adoption of the new eonstitution, Mr. Webster settled himself at Hartford in the practice of the law. Here he fornsed or renewed an acquaintance with a number of young men just entering upon life, who were ardently devoted, like himself, to literary pursuits. Among these may be mentioned his two classmates, Barlow and Woleott; Trumbull, author of MeFingal; Richard Alsop; Dr. Lemuel Hopkins; and, though somewhat older, the Rev. Nathan Strong, pastor of the First Congregational Church, who, in rommon with the three last mentioned, was highly distinguished for the penetration of his intellect and the keemess of his wit. The incessant contact of such minds at the forming period of their progress, had great influence on the literary labits of them all in after life. It gave them a solid and manly cast of thought, a simplicity of taste, a directness of state-
ment, a freedom from all affectation and exuberanec of imagery or diction, which are often best aequired by the salutary use of ridicule, in the action and re-action on each other of kecn and penetrating minds. It had, likewise, a powerful in fluuece on the social circles in which they moved; and the biographer of Governor Wolcott has justly remarked, that at this time "few cities in the Union could boast of a more cultivated or intelligent society than Hartford, whether men or women.
In the autumn of the same year, eneouraged by the prospect of increasing business, Mr. Webster married the daughter of William Greenleaf, Esq., of Boston, a lady of a highly cultivated intelleet, and of great elcgance aud grace of manners. His friend Trumbull speaks of this event in one of his letters to Wolcott, whe was then at New York, in his characteristic vein of humor. "Webster has returned, and brought with him a rery pretty wife. 1 wish him suecess; but I doubt, in the present deeay of business in our profession, whether his profits will enable him to keep up the style he sets out with. I fear he will breakfast upon Institutes, dine upon Dissertations, and go to bed supperless." The result, however, was more favorable than it appeared in the sportive anticipations of Trumbull. Mr. Webster found his business profitable, and continually increasing, during his residence of some years in the practice of the law at Ifartford.
This employment he was induced to relinquish, in 1793, by an interesting crisis in publie affairs. General Washington's celebrated prockamation of neutrality, rendered necessary by the efforts of the French minister, Genet, to raise troops in our country for the invasion of Louisiana, and to fit out privateers against nations at pence with the United States, had called forth the most bitter reproaches of the partisans of France; and it was even doubtful, for a time, whether the unbounded popularity of the Father of His Cotatry could repress the public effervescence in favor of cmbarhing in the wars of the French revolution. In this state of things, Mr. Webster was strongly solicited to give the support of his pen to the measures of the administration, by establishing a daily paper in the city of New York. Though conseious of the sacrifice of personal ease which he was called upon to make, he was so strongly impressed with the dangers of the crisis, and so entirely devoted to the prineiples of Washington, that be did not hesitate to accede to the proposal. Remowing his family to New York, in November, 1703, he conmmenced a daily paper, under the title of the Miner$r a$, and afterward a scmi-weekly paper, with that of the Iferald-names which were subsequently changed to those of the Commercial Advertiser, and Newo lork Spectator. This was the first example of a paper for the country, composed of the columus of a daily paper, without recomposition -a practice which has now become rery common. In addition to his labors as sole editor of these papers, Mr . Webster published, in the year 1791, a pamphlet which had a very extensive circulation, entitled "The Revolution in France."
The publication of the treaty negotiated with Great Britain by Mr. Jay, in $1700^{5}$, aroused an opposition to its ratification of so violent a nature as to stagger for a time the firmness of Washington, and to threaten ciril consmotions. Mr. Webster, in commou with General Itamilton and some of the ablest men of the country, came out in rindication of the treaty. Under the signature of Curitits, he published a series of papers, which were very extensively reprinted throughout the country, and afterward collected by a bookseller of Philadelyhis in a pamphlet form. Of these, ten were coutributed by himself, and two by Mr., afterward Chancellor, Kent. As an eridence of their effect, it may not be improper to state, that Mr. Rufus King expressed his opinion to Mr. Jay, that the essays of Curtit's had contributed more than any other papers of the same kind to allay the discontent and opposition to the treaty ; assigning as a reason, that they were peculiarly well adapted to the understanding of the people at large.
When Mr. Webster resided in New Tork, the yellow ferer prevailed at different tirnes in most of our large Atlantic cities; and a controrersy arose, among the physieians of Philadelphia and Netr York, on the question whether it was introduced by infection, or generated on the spot. The subject interested Mr. Webster deeply; and led him into a laborious investigation of the history of pestilential diseases at every period of the world. The facts which be collected, with the inferences to which he was led, were embodicd in a work of two rolumes, octavo, which, in 1799, was published both in this country and in England. This work has always been considered as a valuable repository of facts; and during the prevalence of the Asiatic cholera in the year 1832, the theories of the author seemed to receive so much confirmation, as to excite a more than ordinary interest in the work, both in Europe and America.
During the wars which were excited by the French revolution, the power assumed by the belligerents to blockade their enemies' ports by proclamation, and the multiplicd seizures of American ressels bound to such ports, produced various discussions respecting the rights of neutral nations in
time of war. These discussions indueed Mr. Webster to examine the subject historically; and, in 1802, he published a treatise full of minute information and able reasoning on the subject. A gentleman of competent abilities, who said he had read all that he could find on that subject in the English, French, German, and Italian languages, declared that he considered this treatise as the best he had seen. The same year, he also publishod "Historical Notices of the Origin and State of Banking Institutions and Insurance Offices," which was republished in Philadelphin by one Humphrey, without giving credit to the author; and a part of which, taken from this reprint, was incerporated into the Philadelpbia edition of Rees's Cyclopedia.
At this time, Mr. Webster resided at New IIaven, to which plaee he had removed in the spring of 1798 . For a short period after his departure from New York, he wrote for the papers meutioncd above, which, although placed under the care of another editor, continued for at time to be his property. Hic very soon succecded, however, in disposing of his intcrest in them, and from that time devoted himself entirely to litcrary pursuits.

In the year 1807, Mr. Webster publishcd "A Philosophical and Practical Grammar of the English Language." This was a highly original work, the result of many years of diligent investigation. The author's views may be gathered from the motto on the title page, taken from Lord Bacon's Aphorisms - "Antisthenes, being asked what learning was most necessary, replied, "To unlearn that which is maught.'" Ife considered our English Grammars as objectionable in one important respect, namely, that of being too mucle conformed to those of the Latin and Grcek languages in their nomenclature and classification. True philosophy, he maintained, requires us to arrange things, and give them names, according to their real nature. Dut our language is rude and irregular, in comparison with those of the ancients. It can not be reduced to the same orderly system. The several parts of it can not be brought under the same names and classifications. We need, therefore, a nomenclature of our own in some important particulars. Thus the word pronown properly denotes a substitutc for a noun. But, in many cases, words of this class are substitutes for clauses, or parts of sontences, and not for single nouns. There are also other words, not ordinarily ranged among pronouns, which act cqually as substitutcs, that is, perform the office of pronouns. Mr. Webster, therefore, proposed to lay aside the word pronoun, and apply the term substitute to this whole class, as describing their true office. Other changes were proposed, of the same nature, and for the same reasons. No one, who examines the subject with attention, can doubt the adrantages of Mr. Webster's nomenclature, ir itself considered. It enabled him to give an analysis of sentences, and to explain constructiuns, in a manner incomparably superior to that of the ordinary systems. IIis intimate acquaintance with the sources of our language prepared him to account, in the most satisfactory manner, for many puzzling forms of expression. Still, the prejudice against a change of nomenclature is so great, that this work has been far less known than it nught to be. It contains mucl valuable matter found in no otherwork, and is believed to be the most truly philosophical Grammar which we have of the English Janguage.

After publishing his Grammar, Mr. Welster entered, in the same year (1807), on the great work of his life, which he had contemplated for a long period - that of preparing a new and complete Dictionary of the Jinglish language. As preliminary to this, he had published, in 1806, a dictionary in the octavo form, containing a large number of words not to be found in nny similar work, with the definitions corrected throughout, though necessarily expressed in very brief terms. From this time, his reading was turned more or less directly to this object. A number of years were spent in collecting words which had not been introduced into the English dictionaries; in discriminating with exactness the various scnses of all the words in our language, and adding those significations which they had recently received. Some estimate may be furmed of the labor bestowed on this part of the work, from the fact that "The American Dictionary of the Jinglish Languayc" contained, in the first edition, twelve thousand words, and between thirty and forty thousand definitions, which are not to be found in any preceding work. The number lias been swelled, by subsequent additions, to about thirty thousand new words. Seventy years had clapsed since the first publication of Johnson's Dictionary ; and scarcely a single inprovement had been attempted in the various editions through which it had passed, or the numerous compilations to which it lad given rise, exeept by the addition of a few words to the vocabulary. Iet in this period the English mind was putting itself forth in every direction, with an aecuracy of rescarch and a fertility of invention which are without a parallel in any other stage of its history. A complete revolution had taken place in ilmost every branch of physical science; new departments had been created, new principles developed, new modes of classification and deseription adopted. The political changes which so signally markod that period,
the excitement of feeling and conflict of opinion resulting from the American and French revolutions, and the numerous modifications which followed in the institutions of society, had also left a deep impress on the language of politics, law, and general literature. Under these circumstances, to make a defining dictionary adapted to the present state of our language, was to produce an entirely new work; and how well Mr. Webster executed the task, will appear from the decision of men best qualified to judge, both in this country and in Europe, who have declared that his improvements upon Johnson are even greater than Johnson himself made on those who preceded him. Still more labor, however, was bestowed on another part of the work; viz., the etymology of our leading terms. In this subject, Mr. Webster had always felt a lively interest, as presenting one of the most curious exhibitions of the progress of the human mind. But it was not till he had advanced considerably in the work as originally commenced, that he found how indispensable a knowledge of the true derivation of words is to an exact development of their various meanings. At this point, therefore, he suspended his labors on the defining part of the Dictionary, and devoted a number of years to an inquiry into the origin of our language, and its connection with those of other countries. In the course of these researches, he examince the vocabularies of twenty of the principal languages of the world, and made a synopsis of the most important words in each; arranging them under the same radical letters, with a translation of their significations, and references from one to another, when the sonses are the same or similar. He was thus enabled to discover the real or probable affinities between the different languages, and, in many instances, to discover the primary, physical idea of an original word, from which the secondary senses have branched forth. Being thus furnished with a clew to guide him among the numerous, and often apparently inconsistent, significations of our most important words, he resumed his labors on the defining part of the Dictionary, and was able to give order and consistency to much that had before appeared confused and contradictory. The results of his inquiries into the origin and filiation of languages were cmbodied in a work, about half the size of the American Dictionary, entitled " $A S y$ nopsis of Hords in Trenty Languagos." This, owing to the cxpense of the undertaking, has not yet been published; though its principal results, so far as our language is concerned, are briefly given in tracing the etymology of our leading terms.
During the progress of these labors, Mr. Webster, finding his resourees inadequate to the support of his family at New IIaven, removed, in 1812, to Amherst, i pleasant country town within eight miles of Northampton, Massachusetts. Here he enterect, with his characteristic ardor, into the literary and social interests of the people among whom he was placed. Ifis extensive library, which was open to all, and his elevated tone of thought and conversation, had naturally a powerful influence on the habits and feclings of a small and sccluded population. It was owing, in part, probably, to his removal to this town, that an academy was there established, which is now among the most flourishing scminaries of our land. A question having soon after arisen respecting the removal of Williams College from a remote part of the state to some more central position, Mr. Webster entered warmly into the design of procuring its establislment at Amherst, as one of the most beatiful and appropriate locations in New Lingland. Though the removal did not take place, so strong an interest on the subject was awakencd in Amherst and the neighboring towns, that a new college was soon after founded there, in the establishment of which Mr. Webster, as president of its first board of trustecs, lad great influence, both by his direct exertions to sceure it patronage, and by the infulse which he had given to the cause of education in that part of the state.
In 1822, Mr. Webster returned with his family to New Haven, and, in 1823, received the degree of LL. I). from lale College. Having nearly completed his Dictionary, he resolved on a royage to Durope, with a wiew to perfect the work by consulting literary men abroad, and by examining some standard authors, to which he could not gain access in this country. He accordingly sailed for l'rance in Junc, 1821, and spent two nonths at Paris in eonsulting several rare works in the Bibliwhiquo du lioi, and then went to England, where he remained till May, 1825. Ile spent about eight months at the University of Cambridge, where he had free access to the public libraries; and there he finished "Tun: Aumutcin Jictrosime." IIe afterward risited London, Oxford, and some of the other prineipal citics of Fingland, and in June returnced to this country. This visit to Fingland gave him an opportunity to become aequainted with literary men and litcrary institutions in that country, and to learn the real state of the Linglish language there.

Soon after ])r. Webster returned to this comery, tho neeessary arrangements were made for the publication of the work. An edition of twenty-five hundred copies wats printed in this country, at the close of 1828 , which was followed by an edition of three thousand in Eingland, under the superin-
tendence of E. H. Barker, Esq., editor of the Thesaumes Grace Lingua of Ilenry Stephens. With the publication of the American Dictionary, at the age of serenty, Dr. Webster considered the labors of his literary life as brought, in a great measure, to a close. He revised a few of his earlier works for publication, and partieularly his "History of the lnited States," a book designed for the higher classes of schools, for youth who are aequiring a taste for history, and for men of business who hare not time to peruse larger treatises.

In 1840-1, Dr. Webster published a second edition of the American Dictionary, consisting of three thousand eopies, in two volumes, royal octaro. The improvements consisted chiefly in the addition of a number of thousand words to the wocabulary, the correction of definitions in several of the eciences, in conformity with later diseoveries and classifieations, and the introduction and explanation of many phrases from foreign languages, and of foreign terms used in books of music.
$\ln 1843$, he published "A Collcction of Papers on Political, Literary, and Moral Subjects," in one volume, octavo. This was eomposed chiefly of tracts and disquisitions, which had been published at an earlier period of his life, either in the form of pamphlets, or of papers read before literary and philosophical socicties, and printed among their Transactions. It contains his "Observations on the French Rerolution," his "Essay on the Rights of Neutral Vations," and the papers signed Crnties, in vindication of Mr. Jay's treaty with Great Britain. To these is added an elaborate dissertation "On the supposed Change in the Temperature of Winter," which mas read before the Connectieut Aeademy of Arts and Sciences, in the year 1799. In this he controverts the opinion which las generally prevailed, that the temperature of the winter season, in northern latitudes, has suffered a material ehange, and become warmer in modern than it was in aneient times. The subject was one which required very great minuteness and extent of historieal research, and this paper contains the result of a series of investigations, which had been earried on, in eonjunction with the author's other pursuits, for a period of more than ten years. Many of the facts whieh it presents are of a very eurious and striking nature. There is, probably, no other treatise whieh exhibits the listorieal evidenee on this subject with so much fullness and aceuracy. In addition to this, the rolume contains a number of other papers of an interesting eharacter, and the whole colleetion forms a truly raluable record of the author's carlier labors.
In thus tracing the principal events of Dr. W'ebster's life, we have reached the commencement of the year in which he died; and it may here be proper to pause for a moment, and consider some of those qualities and habits of mind which prepared him for this long course of publie service and literary labor. The leading traits in the character of Dr. Webster were enterprise, self-reliance, and indomitable perseverance. He was naturally of a sanguine temperament; and the eircumstanees under which he entered on the aetive duties of life were eminently suited to strengthen the original tendeneies of his nature. Our eountry was just struggling into national existence. The public mind was full of ardor, encrgy, and expectation. His early associates were men of powerful intellect, who were engaged, to a great extent, in laying the foundations of our government, and who have stamped the impress of their genius on the institutions of their country. As the advocate of the Federal Constitution, and a strenuous supporter of Washington's administration, he was brought into habits of the closest intimacy with Alexander Hamilton, John Jay, Olirer Wolcott, Timothy Piekering, and the other great men on whom Washington relied for counsel and aid in organizing the new government. The journal which he established at New York was their organ of communication with the public, in the great commercial emporium of the United States He was thus placed on terms of constant and confidential intercourse with the leading members of the eabinet, and the prominent supporters of Washington throughout the country. While he had their respect as a ready and energetic writer, he enjoyed their counsel, imparted with the utmost freedom, as to the manner in which he might best conduct the defense of their common principles. The natural result, especially on a mind constituted like his, was the formation of all his habits of thought and action into a resemblance to theirs. Energy, self-relianee, fearlessness, the resolute defense of whatever he thought right and useful, the strong hope of ultimate success, - these became the great elements of his intellectual eharacter. He carried them with him, at a subsequent period, into all his literary pursuits, and they sustained him under the pressure of diffieulties which would have crushed the spirit of almost any other man.

One of the habits which Dr. Webster formed in this early course of training, was that of arranging all his aequired knowledge in the most exact order, and keeping the elements of progressive thought continually within his reach. Although his memory was uneommonly quiek and tenacions, he saw, as the editor of a daily journal, how idle and unsafe it is to schy on mere recollection for the immense mass of matcrials which a public
writer must lave ever at command. He learnt, therefore, to preserve doch. ments of all kinds with the utmost care. All that he had ever written, all that had been written against him, every thing that he met with in newspapers or periodicals which seemed likely to be of use at any future period, was earefully laid aside in its appropriate place, and was ready at a moment's warning. IIc had also a particular mark by which he denoted, in every work he read, all the new words, or new senses of words, which came under his obserration. Ile filled the margin of his books with notes and comments containing corrections of errors, a comparison of dates, or referenees to eorresponding passages in other works, until his whole library became a kind of Index Rerum, to which he could refer at onee for every thing he had read.

Another habit, which resulted in part from his early pursuits, ras that of carrying on numerous and diversified employments at the same time. To men of the present generation, Dr. Webster is known ehiefly as a learned philologist ; and the natural inferenee would be, that he spent his whole life among his books, and chiefly in devotion to a single class of studies. The faet, however, was far otherwise. Though he was always a close student, - reading, thinking, and writing at every period of his life, - he never withdrew himself from the active employments of soeiety. After his first removal to New Haren, he was for a number of years one of the aldermen of the eity, and judge of one of the state courts. Ile also frequently represented that town in the legislature of the state. During his residence at Amherst, he was called, in repeated instanecs, to discharge similar duties, and spent a part of several winters at Boston as a member of the General Court. He entered with zeal into all the interests of the town and county where be lived, its sehools and academies, its agrieulture and meehanic arts, its advance in taste and refinement. He gare freely of his time, his counsel, and the efforts of his pen, when requested, in public addresses, or through the medium of the press, for the promotion of every kind of social improvement. Equally large and diversified was the range of his intellectual pursuits. There was hardly any department of literature whieh he had not explored with lively interest, at some period of his life. He wrote on a greater variety of topies than perhaps any other author of the United States;-on the foundations of government, the lars of nations, the rights of neutrals, the science of banking, the history of his country, the progress of diseases, and the rariations of elimate; on agriculture, commerce, edueation, morals, religion, and the great means of national adrancement, in addition to the principal theme of his life, philology and grammar. Sueh was the activity of his mind, and the delight he found in new aequisitions, that a change of employment was all the relief he needed from the weariness of protracted study. The refreshment which others seek in journeys, or the entire suspension of intellectual effort, he found, during most of his life, in the stimulus afforded by some new and exeiting object of pursuit. Mental exertion was the native element of his sonl; and it is not too much to say, that another instance of such long-continued literary toil, sueli steady, unfaltering industry, can hardly be found in the annals of our country.
The last of those mental habits which will now be traced was that of original inrestigation, of thorough and penetrating researeh. The period at which Dr. Webster eame forward in public life was one, to an uneommon extent, in which every important subject was discussed in its principles. It was a period when the foundations of our eivil polity were laid, and when such men as Hamilton, Madison, and Jay, became "the expounders of the constitution," and the advocates of the new government. All things conspired to make the diseussions of that day masterly exhibitions of reasoning and profound investigation, - the eharacter of the men engaged, the confliet of great principles, and the weighty interests suspended on the issue. Dr. Webster for some years took a large share in these discussions, both in pamphlets and through the journal which he conducted. The habits which he thus formed went with him into all the literary pursuits of bis subsequent life. They made him a bold, original thinker, - thorough in all his investigations, and fearless in proclaiming the results. IIe had no deference for authority, exeept as sustained by argument. He was no copyist, no mere compiler. Every thing he wrote, from a ehapter in "The Prompter," to his "Introduction to the American Dictionary," bore the same impress of original thought, personal obserfation, and independ. ent inquiry.

It is unnecessary to say how perfectiy these habits were adapted to prepare Dr. Webster for the leading employment of his life, the production of the American Dictionary. Nothing but his eager pursuit of every kind of knowledge, and his exact system in bringing all that he had ever read completely under his command, could have enabled him to give in his first edition more than twelve thousand words and forty thousand definitions, which could then be found in no other similar work. Nothing but his passion for original investigation prevented him from building, like Todd, on
the foundation of Johnson, or arranging IIorne Tooke's ctymelogies, like Richardson, with some additions and imprevements, under their proper heads in a dietionary. But, cemmeneing with the Diversiens of Purley as the starting-peint of his researches, he was led by the character of his mind to widen centinually the field of his inquiries. lle passed frem the western languages to the castern, in tracing the affinitics of his native tongue. Hecstablished some of those great principles which have made ctymology a seience, and led the way in that brilliant earecr of investigation by which the German philologists are throwing so elear a light on the erigin and filiation of the principal languages of the globe. But inte these stadies he would never have entered, nor even theught of attempting such a werk as an original dietienary of the English language, exeept under the impulse of those other traits, - that sanguine temperament, that spirit of self-reliance, that fearless determination to carry ont cyery thing that he thought useful and true, to its utmost limits, - which were spoken of above, as forming the master principle of his character. It is difficult to conceive, at the present day, how sash and hopeless such au undertaking then appeared on the part of any eitizen of the United States. It was much as thongh we should now hear of a similar design by one of the settlers of New IIolland. IIc was assailed with a storm of ridicule at heme and abroad; and even his best friends, while they admired his constancy, and were fully convinced of his erudition, had strong fears that he was engaged in a fruitless effort, - that he wonld never have justice dene him, in bringing his work before the werld under such adverse eireumstances. Nothing, plainly, but uneommon ardor, boldness, and selfeconfidence, could have sustained him under the pressure of these difficulties. But such qualities, it must be confessed, notwithstanding all the support they afford, are not without their disadvantages. They often lead to the adoption of hasty opinions, especially in new and intricate inquiries. Of this Dr. Webster was aware. IIe saw reason to ehange his views on many points, as he widened the sphere of his knowledge. In such eases, he retracted his former statements with the utmost frankness; for he had not a particle of that pride of opinion which makes men so often ashamed to confess an crror, even when they have seen and abandoned it. This ardor of mind is apt, also, to lead men into a strength and confidence of statement which may wear at times the aspect of dognatism. If Dr. Webster should be thought hy any one to have erred in this respect, the error, it should be remembered, was one of temperament - the almost necessary result of that bold, self-relying spirit, without which no man could have undertaken, much less have carried through, the Hereulean task of preparing the American Dictionary. Those, however, who knew him best, can testify that his strength of statement, however great it might be, was never the result of arrogance or presumption. ITe spoke from the mere frankness of his nature; he practiced no reserve; he used none of that eautious phrascology with which most men eonecal their feclings, or guard against misconstruefion. Ife was an ardent lover of truth, and he spoke of the discoveries which he believed himself to have made, much as he would have spoken of the same diseoveries when made by others. ILe was aware that there must be many things in a book like this, especially on a science so imperfect in its development as etymology, which would not stand the test of time. But he never doubted, even in the darkest seasons of discouragement and oblofuy, that he could at last produce such a work, that the world "should not willingly let it dic." The decision of the public verified his anticipations, and freed him from the charge of presumption. Three very large editions, at a high price, have already been exhausted in this eountry and England. The demand is still increasing on both gides of the Atlantic; and the author might well be gratified to learn, that a gentleman who asked, some years since, at one of the principal booksclling estahlishments of London, for the best Finglish dietionary on their shelves, had this work handed to him, with the remark, "That, sir, is the only real dietionary which wo have of our language, though it was prepared by an American."

In his social habits, Dr. Webster was distinguished by dignified ease, affahility, and politeness. Ile was punctilious in his observance of all the nieer propricties of life. There was nothing that amoyed him more, or on which he remarked with greater keenness, than any violation of the established rules of decoram, any disposition to meddle with the eonecrns of others, or to eneroach on the sanetity of those rights and feelings, which, as they cannot be protected by law, must owe their security to delieacy of scatiment in an enlightened community. He had an uncommon degree of refinement in all lis thoughts and feelings. Never, in his most sportive or unguarded moments, did any sentiment escape him which whs coarse or vulgar. Ne had, in this respeet, almost a feminine purity of mind. It might be truly said of him, as was remarked coneerning one of his distinguished eotemporarics in public life, that he was never known to utter an expression which might not have been used with entire frecdum in the most refined female society. In his pecuniary transactions, he was acknowledged by all to be
net only just, but liberal. It was a principle with him, for life, never to be in debt. Every thing was paid for at the time of purehase. In all his deal. ings and social intercourse, he was remarkably direct, frank, and open. IIs had but one character, and that was "known and read of all men." Whatever faults might be imputed to him, no one ever suspected him of doubledealing; no one ever thought he was capable of a mean or dishonorable action.

In the diseharge of his demestic dutics, Dr. Webster was watehfu, consistent, and firm. Though immersed in study, he kept in his hands the entire control of his family arrangements, dewn to the minutest particulars. Erery thing was rednced to exact system; all moved on with perfeet regularity and order, for method was the presiding principle of his life. In the government of his children there was but one rule, and that was instantaneeus and entire obedience. This was insisted upon as right, -as, in the nature of things, due by a child to a parent. IIe did net rest his claim on any explanations, or on showing that the thing required was reasonable or beneficial. While he endeavored to make it elear to his children that he sought their lappiness in whatever be required, he commanded as one laving authority, and he enforced his commands to the utmest, as a duty which he owed equally to his children and to God, who had placed them under his control. He felt that on this subject there had been a gradual letting down of the tone of public sentiment, which was mnch to be deplered. Many, in breaking away from the sternness of Puritan disciplinc, have gone to the opposite extreme. They have virtually abandoned the exereise of parental authority, and endeavored to regulate the conduct of their children by reasoning and persuasion, - by the mere presentation of motives, and not by the enforcement of commands. If such persons succeed, as they rarely do, in preserving any thing like a comfortable state of subordination in their families, they fail at least in the accomplishment of one great end for which their offspring were committed to their care. They send forth their children into life without any of those habits of submission to lawful anthority which are essential to the character of a good eitizen and a useful member of society. In the intelv lectual training of his children, on the other hand, Dr. Webster had much less of system and complicated machinery than many are disposed to adopt. ILis great prineiple was not to orerdo, - to let nature have free scope, and to leave the development of the mind, within ecrtain limits, to the operation of awakened curiosity directed to its proper objects. ILe therefore threw open his extensive library to his children at an early period of their lives, and said, in the words of Cotton Mather, "Read, and you will know." He felt that children shonld learn to aequire knowledge by severe effort; that the prevailing disposition to make every thing ensy is unphilosophical and wrong; that the great object of early training is to form the mind into a capacity of surmounting intelleetual difficulties of any and every kind. In his riew, also, the young have muel to learn in early life, the use of which they ean not then comprehend. They must learn it by rote, partienlarly the spelling of so complicated a language as ours; and all those systems which lead forward children no faster than they ean understand and apply every word they spell, he considered as radieally erroneous. He wished, on the contrary, at this carly period of ready memory and limited comprehension, to store the mind with many things which would afterward be found of indispensable use; things which are learnt with the utmost reluctance, or rather, in most eases, are not learnt at all, in the more advanced stages of intellectual progress. Ile felt that rhere nust necessarily be much of drudgery in the formation of a thoronghly edueated mind. Ilo thought it wise, therefore, to commence those tasks which it involves, from the earliest period at which the youthful intellect ean endure them. Upon these principles he eonstructed his Spelling look, and other works for the use of ehildren. He designed to mako them instruetive, and not mere books of amusement. Whether his views were incorreet or unphil. osophieal, the publie will judge.

In respect to religion, Dr. Wैebster was a firm believer, during a large part of his life, in the great distinetive doctrines of our I'uritan anecstors, whose character he always regarded with the highest veneration. 'There was a period, however, from the time of his leaving college to the age of forty, when he had dounts as to some of those doctrines, and rested in a different system. Soon after he graduated, being unecrtain what business to attempt, or by what means he could obtain subsistence, he felt his mind greatly perplexed, and almost overwhelmed with gloomy apprehensions. In this state, as he afterward informed a friend, he read Johnson's Rambler with unusual interest ; and, in closing the last volume, he made a firm resolution to pursue a course of virtue through life, and to perform every moral and social duty with serupulous exactness. To this he added a settled belief in the inspiration of the Seriptures and the governing providence of God, conneeted with highly reverential views of the divine character and perfections. Here he aested, placing his chicf reliance for salvation on a
faithful discharge of all_the relative duties of life, though not to the entire exclusion of dependence on the merits of the Redeemer. In this state of mind be remained, though with some misgiving and frequent fiuctnations of feeling, to the winter of 1807-8. At that time, there was a scason of general religious interest at New IIaven, under the ministry of the Rer. Moses Stuart, now a professor in the Andover Theological Seminary. To this Dr. Webster's attention was first directed by observing an unusual degree of tenderness and solemnity of feeling in all the adult members of his family. He was thus led to reconsider his former views, and inquire, with an earnestness which he had never felt before, into the nature of personal religion, and the true ground of man's acceptance with God. He had now to decide not for himself only, but, to a certain extent, for others, whose spiritual interests were committed to his charge. Under a sense of this responsibility, he took up the study of the Bible with painful solicitude. As he advanced, the objections which he had formerly entertained against the lumbling doctrines of the gospel were wholly remored. Ile felt their truth in his own experience. He felt that salvation must be wholly of grace. He felt constrained, as he afterward told a friend, to cast himself down before God, confess his sins, implore pardon through the merits of the Redeemer, and there to make his vows of entire obedience to the commands and devotion to the scrvice of his Maker. With his characteristic promptitude, he instantly made known to his family the feelings which he entertained. He called them together the noxt morning, and told them, with deep emotion, that, while be had aimed at the faithful discharge of all his duties as their parent and head, he had neglected one of the most important - that of family prayer. After reading the Scriptures, he led them, with deep solemnity, to the throne of grace, and from that time continned the practice, with the liveliest interest, to the period of his death. IIc made a public profession of religion in April, 1808. Ilis two oldest daughters naited with him in the act, and another, only twelve years of age, was soon added to the number.
In his religious feelings, Dr. Webster was remarkably equable and cheerful. He had a very strong sense of the providence of God, as extending to the minutest concerns of life. In this lef found a source of continual support and consolation, under the severc labors and numerous trials which he had to endure. No the same divine hand he habitually referred all his enjoyments; and it was known to his family that he rarely, if ever, took the slightest refreshment, of any kind, cren between meals, without a momentary pause, and in silent tribute to God as the giver. IIemade the Scriptures his daily study. After the completion of his Dictionary, especially, they were always lying on his table, and he probably read them more than all other books. ILefelt, from that time, that the labors of his life were ended, and that little else remained but to prepare for death. With a grateful sense of past mercies, a cheering consciousness of present support, and an animating hope of future blessedness, he waited with patience until his appointed change should come.

During the spring of IS 43 , Dr. Webster revised the Appendix of his Dictionary, and added some hundreds of words. He completed the printing of it about the middle of May. It was the closing act of his life. Mis hand rested, in its last labors, on the rolmme which he had commenced thirty-six years beforc. Within a few days, in calling on a number of friends in different parts of the town, he walked, during one afternoon, between two and
three miles. The day was chilly, and immediately after his return, he was seized with faintness and a severe oppression on his lungs. An attack of peripneumony followed, which, though not alarming at first, took a sudden turn after four or five days, with fearful indications of a fatal result. It soon became necessary to inform hirn that he was in imminent danger. He reccired the communication with surprise, but with entire composure. His health had been so good, and every bodily function so perfect in its excreise, that he undoubtedly expected to live some years longer. But though suddenly called, he was completely ready. He gave some characteristic directions as to the disposal of his body after death. He spoke of his long life as one of uniform enjoyment, bccanse filled up at every stage with active labors for some valuable end. He expressed his entire resignation to the will of God, and his unshaken trust in the atoning blood of the Redeemer. It was an interesting coincidence, that his former pastor, the Rev. Mr. Stuart, who received him to the church thirty-fire years before, had just arrived at Nesw Haven on a visit to his friends. He called immediately; and the interview brought into affecting comparison the beginning and the end of that long period of consecration to the servicc of Christ. The same hopes which had checred the vigor of manhood were now shedding is softened light over the decay and sufferings of age. "I know in whom I have believed," - such was the solemn and affecting testimony which he gave to his friend, while the hand of dcath was upon him, - "I knowo in whom I have beliered, and that he is able to keep that rbich I have committed to him against that day." Thus, without one donbt, one fear, be resigned his soul into the hands of his Maker, and died on the 2Sth day of May, I8 43 , in the eighty-fifth year of his age.

In his person, Dr. Webster was tall, and somewhat slender, remarkably crect throughont life, and moring, cven in his advanced ycars, with a light and clastic step.
Dr. W'ebster's widow survired him more than four years, and died on the 25 th day of June, 1847, in the eighty-second year of her age. IIe had seven children who arrived at maturity, - one son, William G. Webster, Esq., who resides at New Haren, and six daughters. Of these, the oldest is married to the ILon. William W. Ellsworth, of Hartford, late governor, and now judge of the Supreme Court of Connecticnt; the sccond to the author of this sketch; the third, now deceased, was first inarried to Edward Cobb, Esq., of Portland, Mainc, and afterward to the Rev. Profossor Fowler, of Amberst, Mass.; the fourth, also deccased, was married to Iloratio Southgate, Esq., of Portland, Mainc, and left at her death a daughter, who was adopted by Dr. Webster, and is now married to IIenry Trowbridge, Jun., Esq., of New Maven; the fifth is married to the Rev. Ilenry Jones, of Bridgeport, Conn.; and the sixth remains unmarried, in the family of her brother.

In conclusion, it may be said that the name of Noain Webster, from the wide circulation of some of his works, is known faniliarly to a greater number of the inhabitants of the United States, than the name, probably, of any other individual except the Fathen of mis Cotixtry. Whaterer influence he thus acquired was used at all times to promote the best interests of his fellow-mon. His books, though read by millions, have made no man worse. To multitudes they have been of lasting benefit, net only by the course of early training they have furnished, but by those prccepis of wisdon and virtue with which almost every page is stored

# A BRIEF IISTORY OF THE ENGLISH LANGUAGE. 

By JAMES MADLEY, LL. D.

PBOEESSOR OF THE GBEEK LANGUAGE ASD LITERATURE IS Y.A.E COLEEGE

## LANGUAGES KINDRED TO THE ENGLISII.

§1. Anglo-Saxon, Teutonic, Indo-European. The Enclish lauguage is the descendant and representative of the Anglo-Sazan. It has lost rery much of the inflection, and very many of the words, which belonged to the parent language; and, on the other hand, it has borrowed words very largely, to the extent even of half its rocabulary, from other languages, especially the Freach and the Latin. Yet all the inflections that remain in it, and most of its formative endiags, the pronouns and particles, and, in general, the words which are in most frequent and familiar use, have come to it from the Anglo-Saxon. With all its mixture of foreigu elements, it is still a Teutouic language, like the German, Duteh, Swedish, Danish, and others. These again make one branch in that great femily of lamguages, which, as it extends from India westward, aud covers nearly the entire area of Europe, is called Indo-European. Among all familics of kindred tongues, the Indo-European is pre-eninent, both for the perfection of its organic structure, and for the value of its literar $/$ monaments. The parent of the whole family, the one primitive Indo-European language, hits left no such monument of itsclf; but its forms and roots may bo made out, to a Ereat extent, by the selentilic comparison of the languages whel are descended from it. The main branches of the Indo-Europeau fanily are the following:-
§2. I. The INonin. The Senslirit of the four Vedas, the sacred books of the brahman rellgrion, Is more ancieut than the common or elassical Sanskrit. Liven the latter had ceased to be the language of common life as early as the third century before Christ. It was succeedel by the Irakrit dialeets, one of Which, the Pali, is the sacred language of the Buddhists in Ceylon and Further Indit. These, in thetr tura, were suceceded by the modern idioms of Northern Hiudustan, tho Bengall, Marathi, Guzcrathi, and others. The Mindustani (or ('rdu), formed in the eamps and courts of tho Mohammedan conquerors of India, fs laregely intermixed with lersian and Araluie. The widely-scattered Gypsies speak, with great diversity of diallet, at languago which is clearly of Iulian stock.
§3. JI. The Ir.isitw. Tothis branch beloug, 1. The Zemh, which is believed to have been the language of ancient lanetria, and is preserved in the Aresta, or sacred writings of the l'arsis. 2. The ont I'ersien, which is secuin the enneiform (or arrow-headed) ioseriptions of thalus and Xerxes. The modern lecrsian has lost wearly all the aucient inflection, and with the Mohammedan religion has adopted a multitude of worls from tho Arabis. Other languages belonging to this branch are those of the: Nurts, the Afyltens, tho Osseles (in the Cancasus), and the ancient and modern Armenians. The ludhan and Iranim are often classed together as forming the Indo-Pursian of Aryan brameh of our fanily.
§4. Ill. The Gisisk. Of its numerous dialects, the first to receive liternuy culture was the Ohl fonic or Epic, foilowed by the AEolic, the looric, the liem Ionic, and finally tho Attic, which became at length, though with sone charge of form, the common language of literature and socicty. It is represented now by the Romaic, or Modern Greek. The Allanakn, spoken in a large part of modern Greere, is supposed to be a desermbunt of the ancient Illyrim.
§ 5. IV. 'Iho L.dTh. This is often joined with the preceding, as the GrecoLath, or Classical branch. Closcly akin to Latin were the oblace Italiem lan-gruages-the Oscan, Umbrian, cte - in Centrul Italy. The modern desecndants of the Latin are called the fiomane languages. 'They are the lention, the spenish, the P'orluguese, the P'rorenfal (of sonthern Framee, used In the middle ares as a literary lampure), and the Ferench (originally the popular dhatect of Northern France). All these vontain a small proportion of Teutonic words, brought in by the luabarian conquerors of the Weatern Roman Empire. But muther
 1)acians-ls largely intermixed with borrowed wordn, taken chiclly from the Weghboring Slavonic tribes.
§ 6. V. The Celtic. This branch is divided by strongly-marked differenes into two sections: 1. The Gaclie, incluthog the Jrish (or native lamguge of Ireland), the Erse (or Highlame Scotch), ame the Jfonex (the corrupt hiom of the Isle of Man). The list two are litte more than dialeeds of the Irish. 2. The ('ymric, including the Hilsh (or mative language of Wales), the cornish (whth was spoken in Cornwall, but went out of ane In the last cenfury), and the Armorican (spoken in the Frenely provine of brittany, the anchent Amorica). The oldest manascript spewimens of the Gimbic belong to the close of the efroth century: for the Cymrle, the oldest whele are at all emplous, are three or four couturies later.
§ 7. V1. The Slayonic. The earllest monument is the veralon of the Blbe made in the winth century, by the Greek missionarles Cyril aml Methodias, into the Old Slaronic, the idiom spoken by the Bulgarians of that time. Thls widelydifused elass of languages divides itself into two prineipal sections: 1. The eastern and southern Slavonic, including the Jussion, the Julgariun, and the three Illyrian idioms, Servian, Croatian, and Slovenic. 2. The western Sla vonic, including the Jolish, the Johemion (with the Moravian and Slovact dialects), the Lusutian or Fendish, and the extinct Polabian.
§8. VII. The Limuulvis. The language of Lithuanial has no monuments older than the midde of the sixtecnth ecntury; but it has preserved in a surprising degree the ancient inflection and structure. To the same stock belong the Lellish of Courland and Livonia, wheh is much less ancient in its form, and the Old Prussian, which was once epoken on the coast of the Baltic east of the Vistula, but became extinct in the sevcuteenth century. The connection between this and the preceding brameh is sueh that they are often elassed together as the Letto-Slavic languages.
§ 9 . Vlli. The Tauronic. Here again the earliest monument is a version of the lible, mulo by Vifilas, an Ariam bishop of the fourth century, into his native Gothic (or Meso-Gothie), the Imphare sjoken at that time by the Goths on the Iower Dumbe. This work is preserved only in fragments, but these are of considerable extent, and are of inestimable value to the phllologist. Among the Teutonio languages we distinguish, -
§10. 1. The High Germanic, in Epper or Southern Germany. The Ohb High German Is secu in Otfrid's Kirist, Notker's Translation of the l'salms, aud other monuments, most of them In verse, from the cighth eentury to the end of the cleventh. The Widlle Migh German, from tho twelfh to the fiftemth centary, las a rich poctical literature, inelading tho Nibelungen Not with its aftenclant epies, and the lyrie potry of the Minnesinger. 'The New High German is the laugunge of Luther's libleversiou and of all Cormatu literature sine the lieformation.
§11. 2. The Low Gicmanic, in Northern Germany and the Netherlands. Here belong, (a.) The Fricsie, which was once spoken along the whule northern const of Germany, from the llise westward. Its early mommonts comsist almost wholly of laws, begiming wifl the fonrteenth century. For a lung titace it has existed only as a popular idiom, aud is now confined to a fow small and seathered localitics. (b.) The Amglo-siduon (sometimes called simply Sucon), which In the fifth and sixth eenturies was transplantel from North-eastern Germany to Brituin, and has haul lts subsequent development and history in that ishad. (c.) The Ohd Suron, which was spoken in Northern Germany between the libine und the Elbe, south of the narrow sea-const region, which was ocenpicd by the Friesic. It is known almost solely from the Heliand (l. e., Savior), a metrienl narration of the gospel history, preserved in manuscripts of the ninth exutury. The lamgage of the Netherlands in the same period ean not have differed much from the old saxon, which may be regarded as the common parent of the two following Hioms. (d.) The Dutch, or Low 1) atch, spoken In Holland, and used in literature since the last part of the thirteenth century. The Flomish, epoken in Finuders, Is a diabert of the Duth. (e.) The Low Cerman, Mirictly so called (or I'tattateutsch), the diom of the common people in Forthern Cermany. In the fourteenta mand fifeenth cemtures, it was used as al literary languge; but political cibrumstamees, giving asembney to the IIgh German, hawe reduced it to the inferior position of a pojublar dinlect.
§12. 3. The Norse, or Scandinurion. The Ohd Norse la also ealled oht Iceloudic, us most of its abundint liturature (iddas, sumas, "te.) was composed in Iceland. Theoldest mameripts lu which it is preservel are of the thirtecnth century; but many of lis proluctions mre of "arller orfein, the heathen times of seamelinata. The modern leclandic has ndhered with wimarkablo fildelty to the furms of the nuchent lamenge. But the modren

§13. Lauguagos not Icindrod to tho English. Tha Indo-Vincopan family has no isolited doman, but comes ln contart with varluas other familios of langrages. It is boundeat along its whole northern frouthr liy the I'artaric (or
 merous and widely-different langunger of the Nenchoos, the Jongols, the Turks (In Asia aud Europre), the Ahopyars (Ja 11 ungry), the finns, and a multitule of of her trlueg. To the sontheast, it tumehes on the so-called Iratillian fanily, the Tumil ind its nister ldioms In Ceylon and Sonthern Imlia. In South western Anla it is in contact willamore remarkable family, the siomitic, - lucluding the
(xxiii)

Ifebrew, Syriac, Arabic, aud Ethopic, whth their ancient and important literatures. Evea in South-western Europe, it is doubtful whether tho ancient Etruscan belonged to our family. It is perfeetly clear that the ancient luerian bid not belong to $i t$, which was onee the prevailing language of the Spanish peninsula, and which still lives, on the two sides of the Pyrenees, in the strange language called Basque (Biscayan, or Euscarra). Whether the Indo-European has a primitive connection with any of the adjacent families, is a question which has not been, and perhaps never will be, deeided by philologieal evidence. At all events, it is certain tlat between Welsh and Sanskrit, distant as they are ia space and time, there is an infinitely closer conaection than between the neighboring pairs of Russian and Finnish, German and Ilungarian, or Greck and Hebrew. It is true that some languages of our family have borrowed particular words from languages of ather families. The English, for example, has taken from the Hebrew sueh words as shekel, cherub, seraph, jubilce, pharisee, cubala, cte. ; and from some of them lias formed derivatives, such as scraphic, jubilent, pharisaical, pharisaism, cabalist, cabalistioal, etc. But this borrowing can only oceur where there are historical conditions that favor it: even then it has its limits and its distinctivo marks, and must not be confounded with a radical affinity between two langnages. All etymologizing which assumes or lmplies a radieal affinity between English and Hebrew, English and Fimish, or tho like, 1s, in the present state of philology, unsciontifie and illusory.

GENHLAL FEATURES OF TIIE TEITONIC LANGUAGRS, PARTICULARLY THE ANGLO-SAXON.
§14. Progression of Mutes. In examining the sounds of the Teutonle languages we find that the primitive Indo-European mutes have nadergone a remarkthle series of changes. Thus, the rough mutes of the primitive language, $b h$, $a h, g h$ (Greek $\phi, v, x$ ), have in the Gothic passed into the middle mutes, $b, l_{,}, g$ : the primitive middle mutes, $b, l, g$, lato the smooth, $p, t, k ;$ and the primitive smooth mutes, $p, t, k$, into the rough, $f$, th $(b), h$. The other Teutonie languages agree in this respeet with the Gothie. But the lligh German has gone one step further. It has changed the Gothic $b, d, g$, into $p, t, k$; the Gothic $p, t, k$, into $f, z($ for $t h), c h$; and the Gothic $t h(b)$ into $d$. But the Middle and New Iligh German (as, in part, atso the Old lligh German) have the Gothic $b$ and $g$, without change. To these rules the exceptions are somewhat mumerous: ju part, they depend on speeial laws, - thas, after $s$, the primittve smoot! mutes remain unchanged, - but other cases still appear as anomalous. Yet the general ralidlty of the rules admits of go doubt. The following examples will serve as illustrations:-

| Greek. | Latlu, | Gothic. | Eng. | O. 11. Ger. | N. U. Ger. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| фратйp | frater | brothar | brother | preodar | bruder |
| Oúpa | fores | daur | door | tô' | thor ( $=$ tor ) |
| $x^{\underline{\nu} \nu}\left(\right.$ for $\left.\chi^{\eta \nu-5}\right)$ | anser (for hanser) |  | goose |  | yans |
| divo | duo | tral | tiro | 2nt | stro |
| gevos | genus | kuni | hin | chunni | (kind) |
| тovs (for пod-s) | ) $\mathrm{pes}\left(\right.$ for $p \mathrm{ch}^{3}-\mathrm{s}$ ) | fotus | foot | fuoz | juss |
| тpris | tres | threis | three | dri | drei |
| кaocia | $\operatorname{cor}(\mathrm{d})$ | huirto | heart | heras | hcra |
| *ávvaßıs | cannabis |  | hemp | hancf | hanf |
| ornj-val | sta-re | sta-nelan | sta-7ad | sta-ndan | stch-en |

§ 55. Variation of Vowels. It is a thing of familiar occurrence in all the Teutonle langunges, that the same root appears with a variety of vowel-sounds, as in sing, sang, sung, song; bind, bound, band, bond. Similar variations of vawel-sound are met with in other languages. What is peculiar to the Tentonic is the frequency and regularity with which they are used as a means for the inflection and formation of words. They appear thus most frequently and regularly in the carliest Teutonic Idioms; many words which had them in the AngloSaxon have lost them in the English. Different from these variations of vowel is that attenation, or change from a more open rowel-sound to a closer, which we see in man, men, foot, fect, mouse, mice. This change, which is nnknown to the Gothic, has arisen from the influence of a close vowel, $i$ or $e$, beionging to an infection-ending, whell has dropped off from the Englisi men, feet, mice, but which is still heard in the German plurals, mënn-cr, füss-e, müus-e.
§ 16. Numbers. The Indo-European inflection listinguished three numbers, singular, plural, and dual. In the Teutonic languages, the dual form of the noun has wholly disappeared : that of the verb appears only in the Gothie, and there only in the frst and second persons. The pronouns of the same persons show a dual form, not only in the Gothic, but also in the Anglo-Saxon : thus A-S. wit, we two, une, us two, git, ye two, ine, you two, but in the pharal ue, us, ge (ye), covo (yon), as in English.
§17. Genders. The Indo-European system of gender seems to bave commenced with some differences of inflection between the names of personal and those of impersonal objects. Among the first, certain forms of inflection were afterward appropriated to the names of female persous. The result was a threefuld system of gender, corresponding to the real distinctions of sex. But its claracter was modified, almost from the outset, in two different ways : first, many objects which are without sex were thought of as having in their attributes au analogy to male or female persons, and accordingly receised masculine or feminine inflection; and second, in some cases, abjects which have sex were thought of without special reference to sex, and aceordingly reeeived neuter in-

Hection. Thus, tho system of grammatical gender assumed to a great extent a fictitious, and even an arbitrary, claracter. This system had become fully developed before the eeparation of tho Indo-Furopean family; and it is found, essentially unchanged, not only in the Gotlic and the suglo-Saxon, but eren in the modern German. In the English, on the contrary, it has almost entirely disappeared: the same forms of the articte, the adjective, and even of the pronoun, are used for all kinds of objects. The only distlnction is in the personal pronoun of the third person, where in the singular we nse special forms (he, she; his, her; him, her) in reference to male and female objucts. Lut in the Auglo-Saxon, he is used in referring to se mone, the moon, se stan, the stane, as well as se cyning, the king; heo (slae), in referring to sei sumne, the sun, sed sprec, the speech, as well as sed sucoster, the sister; hit (it), io referring to theit heaforl, the bead, but also to thäl bearn, the child, and ever thäl wif, the woman, wife.
§ 18. Cases. The luda-European had elght eases; the nominative, fur tho subject of a seatence; the accusative, for the direct object; the rlatire, for the indirect object (lo or for which something is done); the genitire, or of-case; tho ablatiee, or from-case; the instrumental, or rith-casa (denotiug either association or instrument); the locative, or in-ease ; and, finally, the rocatiec, or interjectional oase, which does not enter into the construction of the seutenee. Or these, the ablatiro and locative are nowhere found in the Teutonto langrages, Tho rocative, which is not wanting in the Gothic, is scarcely known to the Anglo-Saxon. The instrumental, which has nearly disappeared in the Gothic, is seen in the inflection of Anglo-saxon adjectives and demonstratives. Tha remaining four eases, the nominative, accusative, datlre, and genitive, are common to all the older Teutonie languages, and are still distinguished in the modern German. The English distinguishes nominative and aceusative only in the personal prononns : in substantives, it has the genitive (though in the plural commonly without a distinet form), but confines it almost wholly to the posses. sive relation.
§ 19. Declensions. The Anglo-Saxon, like the other Teutonie languages, has two schemes of noun-inflection, which may be termed the Jowel-Deelension, and the $\boldsymbol{N}$-Declension, they are often callen strong and weak declensions. The few Angla-Saxon substantion which do not agree with either of these sehemes may be treated as anomalous. But different from bath ts the Pranominal Declension, seen in the demonstrativo and most other pronouns. One of the most remarkable peculiarities of the Teutonic Is the fact that every adjective is inflected in two ways : it follows the pronominal declenslon when its substantive is indefinte; but if the substantive is definite, as when it is connected with the definlte article, or with a demonstrative or possessive pronoum, the adfective follows the N゙-declension. Thus the Anglo-Saxon has wis cyning, a wise king, grenitive wises cyninges, dative wioum cyninge gód nama, a good name, genitive gödes naman, dative gôdunt naman ; but se wisa cyning, the wise king, genitive thäs ruisan cyninges, dative tham wisan cyninge; se gôde nama, the grood name, genitive thäs godan naman, ditlve tham gorlan juaman. 'This distinction of the definite and indefinte adjective is preserved in modern German, but is wholly lost in modern English. In substantives, the English stlll shaws a trace of the N-dectension, in a few plurals, like oxen, ckildren, brethren, kine; though all of these, except oxen, are Old English blunders, the $n$ belog misapplied to words that did not have it in the Anglo-Saxon.
§ 20. Voices. The Teutonic rerb, when compared with the Indo-European, shows cxtensive losses. It has but one voice, the active, having given up the middle (or reflexive) voice, and the passire. In the Gothic, indeed, we still find the ancient middle, formed as in the Greek, and nsed generatly in a passiro sense: it is confined, howerer, to the present tense, and shows by other signs that it was beginaing to disappear from the language. In the past tense of the Gothic, and in both teuses of the other old Germanic idioms, the place of a passive verb was supplied by using the passive participle, sametimes with the verb which means to be (Goth, risan, A-s. wesan, or beon, etc.), and some times with the verb which means to become (Goth. rairthan, A-S. wcordhan, Old Enc. worth in woe rorth the day). In all the modern Germanic idioms, except the English, only the latter verb (Ger. verden, Dutch rarden, etc.) is ased to make up the passive. The English alone, doubtless under Freach influence, has fixed upon the verb to bo for this purpose. The Danish and Swedish have a passive made by adding $s$ to the forms of the active. But for this s the Old Icclandic has st, and in the earliest manuseripts sk, which is plainly the reflexive pronoun sil: (self, selves) shortened and added to the active verb. Here, as in many other laguages, the passive was originally reflexire.
§ 21. Modes and Tenses. The Teutonic verb has three finite modes, the indicative, the subjunctive (Greck optative, Sanskrit potential), and the imperatire : the second of these bas, to a great extent, disappeared in modern Euglisli. It has also an infinitive, and a participle active and passive, whicli are essentially verbal nouns. Of the primitive modes, it wants only the one which is represented by the Greek subjunctive. Ot tenses, it has lost the primitive imperfect, future, and aorist, retaining only the present and the perfect. The reduplication of the perfeet (seen in Greek $\lambda \dot{\varepsilon}-\lambda v-k a$, Latin tu-tud-i) is preserved by the Gothic in a few rerbs, as hai-hald, held ; in the other idioms we find little more than traees of its former existence.
§22. Persons and Numbers. There is good reason to beliere that the personal endinge were in their origin pronouns, appended to the verb, and denoting its subject. The Gothie, in general, distinguishes the three persons of the singular and those of the plural by as many differeat endings. The AngloSaxon confounds the three persons in the plural of the indicative, and in both numbers of the subjunctive; but still distinguishes between the singular and the
phurat. Even this last distinetion is, to a great extent, lost in moden English. The Teutonic imperative has ouly a sceond person.
§23. Verbs of Primary and Secondary Inflection. Tbe Tentonic rerbs divide themselves into two well-marked classes, which may be called rerbs of primary, and verbs of secondery, inflection: they are often called verbs ol strong and of weak inflection. To the first class belong words like full, fell; know, knew; swear, swore; trive, droce; choose, chose; lie, lay; come, came; sing, sang, etc. In these, the past teuse adds nothing, except personal endings, after the root or stem of the verb. They are further eharacterized by that variation of the radical yowel (internal inflection), which has been already noticed as a striking peenliarity of the Teutonle. To tho second class belong words like Gill, lilled; lie, lied; lay, laid; lead, led (for leaded); leare, lejt (for leated); Kare, had (for linced); make, matle (for makel); cte. In these, the past tense adds $a$ (in Iligh German, $t$ ) to the rout or stem. Only a few of them have also the ehauge of radienl vowel, as sell, solld bring, brought, cte. In most forms on the Gothic perfect, this a is donbled, as in lag-i-dedum, we laid, lug-i-deduth, yo laid, etc. : apparently it is the reduplicated perfeet of a verb corresponding to our do; thus lag-i-dedum=lay-did-we, wo made a laying. In Gothic, this class embraces the derivative words, while wearly all primitive verbs have the inflection of the first class. But the tendency in all Teutonic lauguages has been to increase the second elass at the expense of the first. Many Anglo-Saxon verbs of the first class belong in Old English to the second: thus, A-S. weoken, to wield, pr. weold, but O. Eng. urelded, lifan, to leave, liff, O. Eng. left; levisan, to lose, leas, O. Eng. lost. And many Old English verbs of the first class belong tu modern Englislı to the sceond: thus, O. Eng. shope (pf. of shape), now shaped f O. Eng. glode (pf. of gltde), now glidel : O. Eng. gnow (bf. of gnaw), now gnured. The result of these changes is, that in modern English, the verbs of the flrst class, when compared with those of the second, have the appearanee of anomalous aud caprielous exceptions to a general law of inflection,

## THE ANGLO-SAXON AS A LITERAIIV LANGUAGE。

824. Name, The emgrants from Germany, who invaded Britain in the fifth and sixth eenturfes, and after long struggles conguered most of the islaud, nppear to have come in great part from the districts now called Sleswick and Holsteln, on the enstern shores of the North Sen. The Angles, who seem to Have been the most numerous portion, established themselves in the cast and north of Britain, but left the Scottish IIighands to their Gaclic population. The Saxons ocenpied the south and west, but left Wrales and Cormwall to their Cymrie popnlation. A third fraction, of far inferior numbers, the Jutes, had possession of kent in the sontli-east of England. There is reason to believe that there was a differeuce of dialect among these settlers; aud, particularly, that the idiom of the Angles varied in some degree from that of the Saxons; but Ih eau not well be doubted that they all spoke substantially the same languate. this common language bears a elose resemblance to the Friesic and to the Old Saxon, holding in some respects an intermediate posifion between them. In its literary momments, it is sometimes designated as the Saxon, sometimes as the English (Einglisc, belonging to the Augles) ; but the latter beemue at length the establlshed name for the hanguage, as Englame (Eingletunt, lamd or the Aneles) for the country. The mame Auglo-Saxon, whill recognizes the claims of both parties, is of later int rodnction.
§25. Alliterative Verse. There wits no written Anelo-somon literature until after tho couversion of the people to Christianity. 'lhe earliest productions Were poetical, and, like all Auglo saxom poctry, inded like all early Teutonic poetry, they are alliterative. The versos are not confined to a uniform number of syllables or succession of aceents, not do they have fimal rhynte. But in call conplet of two short limes, sueral prominent words, two, there, or four, eithur all begin witl the same consonat, of all begin with vowels, which are not required to be the same. In the most common arrangement, there are three alliterative worls in the complet, two in the dirst line, and one in the sceond. A word wheld has an umaceented predix is treated as if the prefix were no part of it. To Hhastrate the description, wo subjou what is perhaps the eirllest specimen of Anglo Saxom verse, the opening lines of Catmons Scripture pariphrase, as they are quoted by hede. We matk the inithal leter of the alliterative worls. In the annexed transintiou, other objects are sacriliced in ordu to represtot the alliteration.

No we sceolon dertian,
heofon-rieces weard,
metoles milte,
und his môd-gethane,
weore uaddor fider,
swa he wundrit grenwh
êce dryhten
ord onstealue.
He xrest gescô, cordhan bearuana
heafon to hrofi,
haligy scyppeme :
tha middangenel
moncymes weard
ece dryliten
after teóde,
firum follan,
frea ilhmilitig.
Now must we glonify the gntridan: of heaven's kinglom, the mak ${ }^{\prime} r^{\prime} s$ mirght, and his mind's thoumblt,
the work of the mot hiped fither,
when of his wonders, each one,
the cror living lum
ordered the erigin.
He crst crented
for corth's children
heavectas a higrt roos,
the holy ereator:
then this min-worla
did man's great gunclima
the ever living lord
afterward prepare,
for men a mansion,
the mastor almuglty.
§26. Works of Poetry and Prose. Among the longer Anglo-sixon poems, the most remarkable is the epio called Bcownll, frow the mame of its Danish hero. It is preserved in a mannseript of the teuth eentary, bat is cer. tainly much more ancient in its origin. Iu substance, it must have come down from heathen times, though the form in which we have it shows the work of Christian hands. We have also a long series of Scripture narratives in AngloSaxon verse: these, too, are foumd in a manuseript of tho tently century; but they have been gencrally regarded as prothetions of Caidmou, a monk who lived in the last half of the seventh. A manuseript of the eighth eentary contains the last two thideds of a metrical version of the Psalms, which may perlaps be the work of Ahinelm of Malmesbury, a contemporary of Cadmon. Of shorter poems, the most interesting are the Traveler's Song, the Death of Ibyrlitnoth, Athelstan's Victory at Brananborh, the very pecnliar and artificial lihymiag Song, and a collection of metrical enigmas: most of these poems are prescred in the fimous lixeter mannserint of the eleventh century. In prose, besides verslons of diferent parts of the Bible, the most important works are the trauslations made from the latin by ling Alfred in the ninth eentury (including tho History of Orosins, the Ecelesiastical History of Bede, and Boethius on the Consolations of Philosoplyy); the llomilies of Alfic, who was Arehbishop of Canterbury in the earlier part of the eleventh century; and the Saxon Chroniele, in which the prinelpal events of Anglo-saxon times are recorded in the form of dry and meagre anaals, apparently by several successive writers, the last of whom wroto about a ecatury after the Norma conquest.

INFLUENCL: OF OTHER LANGUAGES ON THE ANGLO-SANON.
§27. The Celtic. The Saxous and Angles, when they entered liritain, were brought into eontact with a Celtic-spenking population. It is true that the Latin had been spoken by the dominant people in England duriog more than thece centurics of Roman occupation. lint it seems not to have established itself, as it did in Ganl aud Spain, so as to supplat the native langunge of the conntry. It had rather the position whith was afterward held on the sane gromad by its own child, the lreach, for more than two centuries after the Norman eonquest. It was spoken by the ruling easte, white the mass of the people adhered to their own mother-tougue, though they naturally received into it, ay time passed on, a considerable number of words learned from their rulers. In Whacs, which has retainch the same pombation from Ronan tlmes, the vernacular itliom is not of Latin origin, nor is it very largely intemixel with Latin: it is true and gemume Celtic. The probability is, that the great body of those whose possessions passed fato Anglo-samon hands woke substantially the same hagatge. This being so, it wonld not have seemed strange, if the filiom of he conquered propld lad acted on that of the congrerors, so as to introduee a large Celtle clement into Anglo-Saxon and English. Lint the fact is quite the comrary. The Celtic words in linglish are altogether few in number: most of them-as bard, druid. crourd (a didde), etc.-belong to objects which are speclally Celtic; and $n$ large part - including wearly all those of ciaclic orlgin, as brogue, clan, shanty, mhishy, ete.-are of recent introduction. It shoutd seen that in the slow and gradual progress of the Saxou conquests, the native Intitish fell back from point to point before the invaders ; or, if a part remained la their old honses, they were too few to mantain their old language, and had to exchare it for the saxou; while the iuderendent Britous and the suxons, chgaged lu constant hostilitics, were eut of from that free and peaceful interromse which might have heft a marked impress on the lagrages or both. There have budn, inded, etymologists who remeded a large mumber of English wowly as bortowed from the primitive britinh. But in may ol the cases brought forwad, there is no real ebunection betwem the words comparet. Thas Aㅇ. chulh, known (seen in ling. qu-conth), has nothiag to do with Welsh guydr, knowledre ; guyht stands, by Welsheuphony, for earliner vid, which corresponds to lat. vitco, Eng. uit (as verb, to know); white chalh is identical with (icr. kund, man comes from the root seen fur our ken man kno. In many other cases, there ls a real comection, but no borrowing, the words having come down both In the Tentonic mid the Celte from the common Indo Europran stock. Thans barrow, which has been felentified with W. berfit, is mally derived from the root of the verls to bear, fioth. bairan, Lat. froo; white berfir, if not taken from the linglist, was formed on Celtic gromal from the same root, ns seen la lr. beirim. For in may eases, when borrowing has oecured, it his dearly been in the opposite direction, by the Celtie fiom the English, or from the Freweh or the latin. Thus the English soliter and lucher do not come from the Welsh sfuduriam sud llogelh, but have other satiafinctory "tymolondes; while smedu
 loculus. 'There remah, however, $n$ small mmber of words-such as basket, glen, lut, dun (color), cte. - in which un eatly horrowlyry from the Wrelsh is "dther eertaln or probable. Hat the worlts bran, cabin, piece, guay, and a few others like them, if they are really of Celtie orforin, have not come to us direetly from the Celtic, but have passel from a Celtic source luto the lionauce hatguages, and from thence lnto the linelish.
§ 28. Tho Latin. The lutroduction of Clatisianity amone the Anglo-Snxons at the opening of the seventh embury, brourgt with it the study of the Latin. The cultivation of learnlug and lethers betonced almost exelusively to eccleslasties, with whom latin was the prof eskonal language. Ilence quite a numbur of latin or Latinized Greck words, most of them words connected with churel or religlon, passed futo the Anglo-Sason; thes:-

and several others. The names of montlis were also borrowed from the Latin. It is worthy of notice that, while minster and mint have come to us through the Anglo-Saxon, we have the same Latin words by uore recent importation in monastery and money, which come thronch the l'rench monastere and monnaie.
8 29. The Scandinavian, lu the year sg-, lighert, king of the West Saxons, became the acknowledged lord of all the separate fractions iuto which Anglo-Saxon England had betore been divided. Sut the united king dom was destiocd to suffer severely from a cause whichl had begun its work with the openiug of that century. Piratical rosers from the regions about the Baltic were at this period the scourge and terror of Europe. These Eandinavians or Danes, as the Saxons natued them all, whether coming from Ienmark or not -infested the whole eastern coast of England, not only making occasioual rescents, but conquering large districts, and forming permanent settlements. Alfred the Great, though he succeeded in checking their progress and ia foreing them to acknowledge his authority, allowed them to remain under their own laws in this part of Eneland, which was thenee called Danelagh (Dane-law). Vuder his weak successors, the Daues resumed their conquering progress, and at last became masters of the whole country. The Danish kings, Swern, Canute, and Ilardicanute, held the English throne frous 1013 to 1022 . Yet the Danes do not appear to have settled iu large numbers, except in the eastern part of the island. A trace of their existeuce here is still seen iu Ashby, Jiugby, Whitby, and many other names of places with the same ending ; for -by is the Icelaudic by. $r$, Siredisit by, Danish bye, a town, village. There is no evidence that the I bues of England sought to perpetuate or to extend the use of their own lauguage. Even under Danish kings, the Augiosaxon contiuued to be used in public acts and lats. The truth appears to be, that in England, as well as in Normandy, the Scandinavian settlers did not long retain their mother-tougue, but gave it up for the more cultivated jutiom of the people anong whon they settled. At the same time, they did not fail to commmeinate some of their own words to the uew spech of their aloption. The extent of the inflnence thus excrted by the Danes upon our lamguge, it is very difficult to determine. Kaglish words which are found in the scandiuavian idioms, and are not found in the earlier Anglo-Saxon or other Low Germanic idioms, we may naturally suspect to have come in by this chanuel. But the inquiry is subject to great unecetainties. The existing monuments of the early Anglo-saxon are evidently far from showing its complete stock of words; aud the other old monuments of Low Germanic idioms are by no means copious enough to supply the deficiency. It is certain, however, that the Damish influence has been greatly overrated by those who have ascribed to it any consilderable fraction of the English rocabulary. To this influence we may trace the plural are of the rerb to be. Icelandic erum, we are, erudh, ye are, eru, they are, for which the Anglo-Saxon always uscs sindon or sind; and the adjective same, for though the Anglo-Saxon has the word as an adrerb, it always uses ylc for the adjective (compare Scotch of that illk, $\mathbf{i}, \mathbf{e}$, of the same, of a place bearing the same name).
§30. The Norman-French. The Normans (or North-men) were a body of Scandinavi:n adrenturers, who, while their countrymen, the Danes, were making ronquests io England, succeeded iu establishing themselves on the opposite coast of France. In 912, Kiny Charles the Simple ceded to Duke Rollo and his Norman followers the proviuce which took from them its name of Sormandy. Here they soon ceased 10 speak their own language, adopting that which was spoken by the native population. If in this they took the same course with their Danish kinsmen in England, the change was a much greater one in the case of the Normans; for the Scandinavion differed far less from the AngloSaxon, another member of the same Teutonic family, than from the French, which was a daughter of the Latin. The influcace of the Norman-French began to be felt in Ligland even before the Norman conquest of the country. It seems to have been much used at the court of Edward the Confessor, who fellowed the Danish dynasty, and reigned from 10t? to 100 . ${ }^{\text {a }}$. This prince, though of Saxon birtl, had spent his youth in Normatudy. When he became king of England, he surrounded himself with Normans, exciting thes the jealousy of lis natire subjects, who in 1052 constrained him to banish the obnoxious fo ciguers. After his death, Duke Willian of Normady lad claim to the English cromb; and the hard-fought battle of Ihastings, in 1066, in which IIarold, the Sax on kiag, was slaio, and his army totally defeated, established the claim of the Conqueror. This event, which has affected the whole subsequent history of Fingland, has had the most important influence on its language. It was not, indeed, the intention of William to suppress the language of his new subjects. lie is said to hare made an attempt, though an unsuccessful one, to acquire it himself. But the political and social conditions which followed the conquest were extremely unfavorable to the lagguge of the conquered people. Their obstinate resistance and repeated insurrections led the Conqueror to treat them with the utmost severity. They were shut out from offices of state; they were remoral from ecclesiastical positions; they were deprived of Jands and reduced to porerty and wretinedness. The court, the nobility, the landed gentry, the
clergy, the army, were all Norman. The Anglo-Saxon language was banished from these circles, and the French took its place. The instruction of tho schools was given in Frenel alone. There was nothing to stimulate, there was every thing to discourage, the cultivation of the native lauguage.

THANSITION FROM ANGLO-SAXON TO MODERN ENGLISII.
§31. Periods. For fire centuries after the Norman conquest, the language of England was in a constant and rapid process of change. During the first of these centuries, we may believe that it had not yet departed very widely from the carlier type. The last monument of the old language is the concluding part of the Saxon Chronicle, in which the history is brought down to the death or King stephen in 115t. We ean not, however, suppose that the writer of that part has used the idiom which was spoken by the people in his own time. The change by which, in grammatical e sdings, the older vowels $a, o, u$, have all passed into $c$, is found in lligh Gernan from the begiuning of the twelfth cen. tury: it probably took place even carlier in our language. In the second century after the concuest, the old inflection, with the clange just described, is still for the most part retained, but in a state of much confusiou and corruption : this is callerl the Scmi-Saxon period. In the third century, a large part of the old inflection has disappeared, while no great proportion of French words has yet come into the language : this is called the Old Laglish period. In the fourth and fifth centuries, we find a rast body of French words mixed with those of native stock, while the old juffection is brought down to that mioimum which romains in the language at this day: this is called the Jiddle English pesiod. It must be remembered that the process of change was gradual and incessant: the languare did not remain fixed for a time, and then on a suddeu leap to a new position. Hence the periods here distinguished are in some degree arbitrary, at least as regards their boundaries; and writers may be found of the same period who are separated from each other by marked differenees of language.
§ 32. Changes. It is implied in the foregoing statemeuts that the changes in our language, consequent ou the Norman oceupatiou of Eugland, were mainly of two kinds: 1. The loss of the Auglo-Sason inflection; and, 2. The introduction of new words from the Freuch. The latter change did not go on to any great exteut uatil more than two centuries after the conquest; yet no one can doubt that it was caused by that event. But in regard to the earlier change, the loss of the ancient inflection, - it is maintained by some writers that this was in no decree occasioned by the coming of the Normans. A similar change in the moderu languacres of Latin origin is cfen explained from the dificulty which the barbarian conquerors of the Roman empire must have found in mastering the complex system of Latin inflection. The explanation, whether satisfactory or not for the Eomance languages, can not be applied to ours; for the change in quesion had nearly rum its course before any large part of the Normans had begun to speak English. It is true also that clanges of the same nature have been malle, and not very far from the same time, in the other Germanic idioms : in each of them, the one rowel $e$ has taken the place of other rowels in grammatlcal codings, and in each, a part of the endings have been confounded with one another, or have disappeared altogether. What is peculiar to the English is the rapidity of this movement and the extent to which it was carried. No written language of Germanic stock, no unwritten diaject of any prowince or people, shows, even at the present day, a loss of inflection equal to what appears in the English of five hundred years ago. This striking peculiarity in the effect compels us to seek for a peculiar cause; and no canse can be found so likely to produce it, as the long subjection of the English-speaking people to a people of different race and langrage. The tendencies and influences which would in any case Jave giren a new form to the English, as they have to its eister idioms, derived additional force and greater quickness of operation from the depressed circumstances of the Eoglish peopie. The language shared in the sufering and degradation which fell on those who spoke it. Used only by the lower classes, and regnrded with contempt by the higher, shut out from the schools, from cultivated socicty, and, with few exceptions, from werks of literature, it was left without standards of correctness; it was deprived of those conservative influences which might otherwise bave retarded the progress of change and disintegration.
§ 33. Semi-Saxon Period, 1150-1250. The Anglo-Saxon inflection is still in a great measure retaioed, but with $e$ instead of other vowels in the endings, and with much confusion and irregularity of use. 'f his period is repren sented chiefly by three works: 1. The Brut of Layamon, a long, narrative poem, which recites the carly fabulous history of Britain. It is a free translation, or $r_{3}$ more truly, a working over, of the Roman de Brut, composed in Frescla by Wace, and finished in 1155 . Layamon was a priest, who lived at Ernley, in Korth Worestershire, near the close of the twelfth century. His work consists of 32,000 short lines, partly alliterative, like the Anglo-Saxon verse. partly rhymed, like the French original, both kinds being rery loosely constructed and irregularly mixed together. A second manuscript of the poem affords an instructive example of the way in which older writings were wont to be modernized in successive transcriptions ; it is, perhaps, half a century later than the first, and shows a text which is much altered, and decidedly more modern. 2. The Ormulum, 2s. it is called by its author, an Augustinian nonk, from his orm name, Ormin, or Orm. The poem - or what remains of it - contains nearly 20,000 short lioes and consists of thirty-two parts, founded on successive gospel selections in the daily church scrvice, the narrative being first set forth in a loose paraphrase, and then followed by homiletic comments. The retses are arranged in couplets, with a line of eight syllables followed by one of seven: they are con-
atructed with mueh regularity of aceent, though withoat either alliteration or rhyme. As regards its language, the poem is evidently more modern than that of Layamon. Its appearance, however, is remdered unconih by a peculiarity of spelling, which is not without interest and value to the philologist : it carries out consistently the tendency of English orthography to donble the consomant which follows a short vowel: thus, ond, this, after, under, are spelt amed, thiss, afterr, underr. 3. The Ancren lionle, or role of female anelorites, it prose work by an unknown author, containing a code of monastic rerulations for a hotsehold of religious ladies. Owiag, perhaps, to the mature of its subject, it shows quite a number of words borrowed from the French and Latin, while in the works before named such words are altogether rare.
§34. Old English Period, 1250-1350. Ifere the Iuglo Saxon infeetion is to a great extent discarded, but only $n$ noderate proportion of words is yet adopted from the Freneh. 'lhe principal monuments are, 1. A prodamation of King Henry III., issued in 1255, a short but highly important flocument. 2. A series of metrieal romaners, entitled lyng Alisaunder, The Oul aud Nightingale, The Geste of Kyng Morn, Ilavelak the Dane, ant others, which belong to the latter part of the thirteenth century. They ate composed in rhymed verses, and are most of them founded on French originals. 3. The long rhyment chronicle by Hobert of Gloucester, who flomerisher about 1300 , and the still longer one hy Robert Manning, or Robert de Srunne, who wrote some years later. Both these writers traverso the whole fieh of English history, myihieal and veritable, from Frut and his Trojans down to Ilenry 1If, and Jelwarl I. There is Hso a collection of lives and legends of the saints, which is ascribel to fobert of filoucester.
§35. Introduction of French Words. Ina vocabulary of the words used by Lurlish writers during the last half of the thintenth century, only about twilve per cent. of the whole nomber are forcign to the Auglo saxon. If we take the words of any writer as they stame in his pages, the proportion will bo mull smaller. For Fobert of Glouesster, it does not exceed four or fise per cent. But from the midde of the fourteentla eentury, English literature preents in this respect a different appearance. A multitude of fomance words is ewery where seen, mixed with those of Tutonic origin. Lwell works which, like the Vision of Plers lloughman, were intomed for the people, ahomen in words taken from the french. The difference betwen the Enerlish of 1:000 and that of 1350 marks this ns the time when the highor classes in Eughand beame gencrally acqualnted with the English language. Ip to this time the inhabitants of the country ham heen diviled into two hodins, having each a lamgunge if its nwa. The nobility and gentry of Norman origin retaind their French, and only in oceasional instmeses aequirel the Saxon, which they looked on with contempt, as rude in itself med spoken by an iutictior race. 'They han a copious literature, consisting ehiefly of poctry and romimee, connosed in French, but written, much of it, on Fnerlish soil. On the other hund, the mass of the people efooke only Englisin. Of conse there unst have ben many indiviluals who knew both langrages, and combl act as neenssary modiators butween the groat parties that knew but one. These, howewr, formed ouly a small fraction of the whole people. In those times, a work composed in Einglish could not admit Freuch words to any great extent; for such a work would not be reat by the highor classes, and to the lower elasses French was gencrally muntellighbh. Lut the events of the thirteenth century hat been gradually filling up the chasm which before separated the two races. When the Freuch possessions of the Inglish crown were wrested from the feclsle hands of Jolu, the politient ties were severed which had long connected the Normans of Vustand with their brethren across the Chamel. Henceforth Eigglant, not Frame, was their country: the linglish peonle, not the French, ware their comutrymen. 'Phy fought with Saxon follow-soldiers against Irench elmomios: they strugglend against royal prerogative with sympathy and aid from Sixon follow-sulgects. At the same tiane, social harriers were giving way. Marringeties were connecting the two races. Saxans were nequiring wealth, plassing into the ranks of the aristocrary, or rising to high pasitions in the chareh. The ferding of a rommon nationality was moming to mrevail owe the alienating memories of rate mat ronquest. Cuder such indueners, it was maturnl that the French-speaking aristocraey should becin to learn Fighish. They did this as a maftor of convonlonce, to earry on the necessary intorcourse of business anm socicty, withont desprylug to give up the French, which in matay instances continued to be spoken ha thoir families for two or thre generations longer. The ehanere, we may presume, commenced with that lower, but more muncous part of the Noman aristocracy, who resided constuntly on their estates, surrommed ly a sixon popalntion. Once filirly initiatest, the mawoment mut have gone forwarl with rapitity. 'The court was the last place to be reached by its intuenme. It is bolinwel that nome of the three Edwarils was neenstomed to speak Eurplish. In thu schools, it is glated that, during the first half of the fourtemth contury, lin luch was still used as the language of instructlon and the medium for lemroisg Iatin, lout that during the last half of the same contury the English grablually took ha pare. Now, English, as finoken by the higher classes who learnell at, would nalurally be intermixed with french expressions. It would have been wherwise, If they hat recrarded the Jinglishas a puperior banguare, as having a finer nuture or a higher cultivation tham their own. lut they doubthos folt that lig na dutimus. ture of l'rench they were enriching and enmoling an unrethed and meagre idiom. Whenever the fronch word which rose to thelr mind hore a shath of meaning for which they found no equiralent in binglish, they di.l mot content theaselves with a loose expression, nor thid they mulentor to form by Finglish analagy one that should be exact: they empinyed the liremelt word itself. They did this cren when the English offered an equivalent expresslon, if the French wori was particularly recommended by interesting or agrecable usso-
clations. For words of a technical character they would ecareely think of eceking equivalents in English. The Lody of the English people were now for the first time brought into oral commusication with their rulers. Ilearing the Freach words with the Saxon, they were able to understand their meaning Jlearing them from the lips of their enperiors, they matorally imitated and adopted them. Thus the new importations, bearing the stamp of eleganee and fishion, passed from the circles of polite society into the language of the vulgar. They found free entrance into works of literature, not only because they supphem real deficicucies in the Jinglish vecahulary, but also bectuse they were especially familiar and acceptible to those classes whom the author would most wish to interest and please.
§ 36. Middle English Period, 1350-1550. The oll inflection unde:goes some further losse's; the unaccented linal $c$ (as in lowe, fome, efe.) begrins to disappear in pronunciation; but the great characteristic of this puriond is tha immense accession of words taken from the Irench. It will be enought to mamo lece a few of the most important works and authors. Jn the por ous of lanreace Minot, writhen about $13 \mathrm{~S}^{\circ} 0$, we final for the first time a large proportion of French words. These were followed (between 13tionad 15:0) by the popular porm entitled The Vision of Piers Iloughman, a satirical allegory aberibed to liobert langlande. It is writteu in altiterative verse of very regular constraction. 'Ine same specirs of berse is foond in some poems of a similar character which followed the Vision; but it wns not used by Chatuer nnd Gower fan tho srme nge, nor has it been used by any poct Eince the emd of that econtary. The great name of early Emerlish literature is Geffrey Clanucer, who died in 1100; and the Canterbury Tahs is the most perfect, as it is probably the latent, of his prodisetions. The clarge often brought against him, of having corrupted the simplicity of the native popular English by large importation of French words, omly shows a want of aequaintance with the literature of that time. His contemporary John Gower, whose chicf English work is the Confessio Amantis, thongh far inferior in genius to Chaneer, was for a long time held in equal, or ven greater, estimation. To the tirst half of the fifterath centary belongs iohn I.yugate, n copions writer nul fluent versifier, but of little joctie talent. Among the prose writings of this perion, the earliest is the Travels of Sir Johs Maneleville, composed about 135fi. But more important in their influence on the Janguage wete the Wyesifite Versiona of the Lible. The Ot] Testament is
 himself, the whole being finished about liso. To lonery is ascribed a revision of the whole work, mate some eight or ten yars later, with many alterations and corrections.
§37. The rentury from 1450 to 1500 might be regarded as a distinet perion. The unacented final $e$ was now generally mewlecten, aud at length wholly lost in proumbiation; and in many ways the lamgatio assumed a more modern asject. Laterature revervel a new hapulse from the art of printing. Amonge the most important of the numerous looks which issued from the celcbrated Caxton press (1foto 1190 ) was the Morte d'Arthur, by Sir 'Hhomas Malory, a prose comprulium of the poetical leguds concerning king Arthar nud his Kuights of the Lound Table. The translation of Froissart's Choniche by Lord Dhruere, which appeared in 1823-25, was not noworthy of the rich and elowing originat. Wromay mention also, as excellent specinatas of the lamgage at that time, the writimes of Sir Thomas More, aud the New Tesfment fanslation of Willism Tymalo, whelt was printed in 159 as. As for the poets of that most mpoetic age, it is enoush to mame the rude lut tigorous sielton. The poems of Surrey mal Wyath, thongh written before 1500 , belong more in languge and charmer to the following period.
§38. Commencemeut of the Modern Poriod. With the midtle of the vixtenth cuntury, the Engrish enters on a mew stage of its hisfory. It dial not crase to chamere for then it would have cerased to be a living lamgrage. Fint its latur changes have not had the rapil progress and the radieal character whith tu-fonered to those of the preceding ecenturies. Many words which were in use three lumdred years ago, have smee breome obsolete. A muth larger momber
 terms ly the thousant, but a multitule of worls whelh lidoner to the common atock of litarature and nociety. Words whith hare been retaned have often lost their old memangs aud taken on mev ones. In the combination and construetion of words, in phrase und hlom, the changes hate boren yet mork bumerons, and the gemeral color and flaror of Vactish style are quite difirent now from what they were in the last hale of the sixternth contury. Sut thass
 inflection, the little which rematued at that thme has come down to us with hardly :my clange. Viet the ending th on tho thited person singitar of virbs (as

 memory by the watre of the Einglish Bible. The sublumetive an listince from
 is also growlyg ohendete. Still we never ford that the language of Shakepeare and bavon is wid川y difierent from our own. Even sponser, hotwhetanding
 etranger and renute than Lord Berara and Sir "Phomas More. The erat writera of the biltabethan nge have dowe muth in prouthate amb kefy alise the form of linglish which is sem in therir works. The antiontand sursion of the 13ible hat exerted a rouservatise influme of the same kind, and one esen more powerful. 11 must lwe ohersed, howerer, that this version as printed now has
 mid a musure uf obsolete forma have ghen place to those in grerent use. Thus muc is chnnged to more, sith to since, fil to faclech, oucth to ourneth, unpossi
bie to impossille, etc. A judicious revision, with further alterations of antiquated phraseology, scems desirable at this time. If works printed in Shakspeare's day appear strange, at first view, to the modern reader, it is chicfly owiug to changes since made in the spelling, which did not become fixed until a century later. Unfortunately, these changes are far from having made the orthography of the language simple and consistent. The defects of English spelting have to a great extent arisen from the mixture of different clements in the langruage. Neither the Anglo-Saxon orthography nor the Norman-French was distinguished for its regularity. But when the two were thrown together, the result was a mass of confusion and anomaly hardly to be parallelled, except, perhaps, io the spelling of the native lrish. The present system retains much of this chaotic character. It is, perhaps, too firmly fixed for exteusive chages, such as could alone effect a material improvement. But it is not ereditable to the Loglish vame, nor accordant with the practical spirit of the English people. With a multitude of signs for the same sound, aod a multitude of sounds for the same sign, it poorly fulfills the original and proper oflice of orthography, to indicate promunciation; nor does it better fulall the improper offiec, which some would assert for it, of a guide to etymology. Jt imposes a needless burden on the native learner. To a forcigner it serionsly agrovates the diffienlty of acquiring the language, and thas restricts the influence of Euglish Literature on the mind of the world.
§ 39. Introduction of Latin and Greek words. We have already seen that a mumber of words passed from the Latin into the Anglo-Saxon. The same process has gone on in the subsequent stages of the language. With the iueption of the $\mathbf{y i d d l}$ E Eoglish period, it receired a new impulse. The admissiou of foreign words in great numbers from the French, a daughter of the latin, made it matural and easy to admit them also from the wother-lunguage. In many instances it is diffeult to determine whether a worl of Latio origin has rome to us through the French, or has been taken directly from the Latin. Lut while the importation of Freach words ceased, after a tione, to be an active and prominent agency in the growth of the language, it has beeu otherwise with the tendency to borrow from the Latin. This beame even stronger with the increasing attention to classicul studies. The fonduess for Latin phraseology is noticed with censure by Thomas Wilsous in his System of Libetoric and of Logic, published in 1553: "The unlearned or foolish fantastical, that smells but of learning (such fellows as have seen learned men in their days), will so latia their tongues, that the simple can not but wonder at their talk, and think surely they speai by some revelation." In like manner an author of the next century, Nir Thomas Browne, whose own style is in a large measure Latin, remarks, "If elegracy still proceedeth, and Eoglish pens maintain that stream we have of late observed to flow from many, we shall within a few years be faid to learn Latin to understand linglish, aud a work will prove of equal facility iu either." The practice of adding to the Eaglish voeabulary words adopted from the Latin and the Greck is still carried on with activity, and there is little prospect of its reasing. It is almost neeessary ns a meaus of lenoting those new objects, ideas, und relations, which are coutintally appearing and demanding expression. The resources of the English for the formation of new words from elements already existing in it are so fimited that ail from other languages is indispensable. The new terms which are required by the progress of science, are almost wholly drawn from these zources, especially from the inexhaustible storehouse of Greck expression.

## THE ENGLISH A COMPOSITE HANGUAGE.

\& $4 \boldsymbol{U}$. Proportion of the Elements. There is no language, probably, in which all the worts are formed by its own processes from roots that oririmally belonged to it. What is peculiar to the English is not that it has words borrowed from other languages, but that it has so many of them; that a large part of its rocabulary is of foreign origin. In this respect it may be compared to the modern Persian and the Wallachian. The French words which have been ingrafted on the native linglish stock are, with few exceptions, derived from the Latin; and when added to the almost equal number which have come directly from that language, they make, perhaps, four fifths of all our borrowed words. Much smaller, though still considerable, especially in scientific use, is the number of words taken from the Greek. The remainder of our forcige words can harlly exceed a twentieth part of the whole vocabulary, and are drawn from a great varicty of sourees - Celtic, Dauish, Duteh, Ilcbrew, Irabic, Turkish, etc. If all the words in a large English dictionary were classed according to their origin, it would appear that the foreign or non-kaxon words make a decided majority of the whole number. It must be remarked, lowerer, that in such a dietionary there are many words whieh, thongh perhaps put forward by distincruished writers, have never established themselves in general use; and also many words which belong, indeed, to the established phraseology of particular scicaces and arts, but are unknown to the great majority even of educated people in both classes the number of foreign words is disproportionately large. Hence, if we take all the distinct words used by particular writert, we shall find a differeat ratio between the Saxon and foreign clements. Of those used by Shakspeare, it is said that sixty per cent. are of Saxoo origin; and the ratio is about the same for the common version of the Bible. But in most littrary works of the last two eenturies, the foreign element is certainly larger: in greneral, doubtless, it would be found, if reckoned in this way, to equal or exeeed the Saxon. But if, instead of counting only distinct words as they would be given in a vocabulary, we count all the words of a writer as they stand on his
pages, we shall obtain very different ratios. The Saxon worcis will now te foud in a large majority, varying from sixty to more than nincty per cent, of the whole number. The style of Johnson abounds in words of Latin origin; but in the Preface to his Dictionary there are seventy-two per cent. of Saxon words. In Miltons poctical works about two thirds of the rocabulary are foreign ; but in the sixth book of Paradise Lost, four fifths of all the words are Saxon. The explanation of these appearances lies in two facts: 1. The words which belong more to the grammar than to the lexicon - whech express not so mueh conceljtions of the mind as the relations between its conceptions - are almost wholly Saxon. Tu this class beluug articles, pronouns, adverbs from pronominal roots, nearly all prepositions and coujunctions (ouly save, cxcept, during, concerning, because, and a few more, are lrench). These are words which occur in every sentence. In a lagguage, like ours, of seanty inflection, it is hardly possible to form two consecutive seatences without them. The substantial clements of the proposition, nouns, adjectives, verbs, may all be obtained from abroad; but the conuecting links, which must nmite them in the framework of seutences, can only be found at home. 2. If we turn to these substantial clements, and fix upon the objects, qualities, states, and actious which most frequently present themselves to the mind, and thus call for the most frequeat expressiou, it will be found that a large majority of them are denoted by words of Saxon origin. Wo refer to objects, sucl as man, horse, Lird, body, Jlesh, hlood, heal, hand, heurt, soul, minh, heaven, winh, rain, thy, summer, water, stone, goll, fiell, tree, apple, ctc.; to qualities, such as good, bad, high, low, long, short, cold, hot, hurd, soft, white, black, ctc.; to actious, such as to lie, sit, stand, uralk, mun, lo, say, take, hate, break, thinli, fiel, love, fear, innl, ete. There are borrowed words of similar meaning, as least, cagle, vein, fuce, spirit, air, hour, autumn, river, gem, fruit, flower, etc.; large, false, tenulcr, pure, purple, etc.; to rest, move, conter, touch, please, enjoy, etc.; but they are altogetber fewer, and generally of less frequent occurrence. The worls for numbers lower than a million are all Saxon: among the ordinals only second has come in from the French.
§41. Fusion of the Elements. The foreign words that have come into our language do wot staul by themselves as a distinet and independent elass: they are Anglicized, subjected to Euglish laws and aulogies, and thus assimilated to the older denizens of the language. This has taken place ehiefly in three ways: 1. They are in most cases accented according to English analogy. 'Shis assumption of a new aceent has been a gradual process. Jn early Eaglish poctry we find cuntré (country), colour, comaumdemént, messangire, lenysoin (Leuison), casteill (castle), etc., aceented as iu French on the vowel here marked. The usage of Chaucer is quito variable. Such words as honour, difficultec, pemince, tranquëst, manere (manner), peraventire, conseil (counsel), riage (royage), cte., he often gives, as here marked, with the French aceent ; yet not uufroquently ho shifts their accent, aceording to English tendencies, toward the beginning of the word. In the next eentury the French aceent is still to be seen, but with a greater prevalence of the English. And the latter had established itself in Slakspeare's time nearly as at the present day. A number of words which as verbs retain the French accent, when used as nouns, exchange it for an Laglishone: thus diccent and to accent, concert and to concért, insult and to insult, etc. 2. The borrowed words are dechined aceording to English analogy". It is true that radius, nucleus, momentum, criterion, phenomenon, and some other words, retaiu their Latin and Greek plurals, radii, nuclei, momenta, criteria, phenomena, ete. But these are rare exceptions. In reneral, the few iuflections left in English are applied as readily to a Freach or Latiu word as to is Suxon ouc. As the Saxon verb love makes lorest, loves, lored, lovedst, loring, so the l'rench vert more makes morest, mores, moved, moredst, moring. 3. The borrowed words are often made to receive prefixes which come from the Saxon, as in be-siege, un-pretending, mis-conceire, under-value, over-furn, after-piece, out-line, etc.; or formative suffixes which come from the Saxon, as in largeness, dube-lom, fulse-hool, apprentice-ship, use-less, grate-fut, quarrel-some, fool-ish, etc. It affords a still more strikiug evideuce of the fusion which has taken place amoag the elements of our language, that the process here described is in many cases reversed ; that partienlar endings which were found in the foreign words, have become so familiar to the English ear and mind, as to be disjoined from their connections, and applied with more or less frequency to words of mative stock. Thus, we find Saxon words with French pretixes, as in ell-duar, dis-belief, re-light, inter-mingle, trans-ship, ete.; aud saxon words with l'rench formative suffixes, as in forliear-ance, bond-age, atone-ment, robbery, odd-ity, stream-let, huntr-ess, eat-alle, buri-al, right-eous, tall-atire, etc.
§ 42. Different Character of the Elements. It must be whitted that the fusion of which we lave spoken is not a completc one. The borrowed words, taken as a class, have a peculiar character, which separates them, even to the feeling of unclucated persons, from those of native stoek. There are, indeed, particular cases in which the ordinary relation does not hold; there are some in which it is actually inverted, as in sign aud token, color and hue, pouer and might. Here the familiar sign, color, power, are from the l'rench, and the more poetical token, hae, might, are from the saxon. But in general the saxon words are simple, homely, and substantial, fitted for every-day events and natural feelings; while the lrenel and Latin words are elegant, dignified, and artificial, fitted for the pomp of rhetoric, the subtilty of disputation, or the courtly reserve of diplomacy. The difference arises partly from the fact already noticed, that the most familiar objects, qualities, and actions have generally retaioed their primitive saxol designations. The foreign words bear an impress derived from the courtiers and seholars who introduced them. To a great extent they stand for conceptions which belong especially to disciplined thought and cultivated feeling. But the difference, no doubt, depends also on the impression Which the two classes of words make upon the ear. The Saxou are shorter, in
great part monosyllable，and often full of consonants；winie the Freuch aud Latin words are longer，smoother，and have greater breath of vowel－sounds． It can not well be denied that this marked diversity of character between native and foreign words gives to our languace a somewhat heterogeucous and incon－ gruous aspect．let it furvishes means for great variety in the expressiou of the same thoughts，and serres to distinguish and Indivilualize the styles of dif－ ferent authors．Among writes；who in this respect occupy an extreme posi－ tiou，may be uaned，on the one side，Bunyan，De Foe，Framkin，aud Cobbett； on the other，IIooker，Milton，Johnson，and Chalmers．
§ 43．It has bee observed that in the Liturgy of the ehureh of England there is a marked tendency to couple lreach and Saxou expressions of the same，or nearly the same，meaning，as if in this way to adtress the taste and understanding of all classes：thas，＂to acknowledge and conjess；＂＂by his infinite goodness and mercy；＂＂when we assemble and meet together．＂A slm－ ilar tendeney has been pointed out elsewhere，as in the writimge of Hooker．
§ 44 ．It was natural that when a multitude of foreign words were brought tuto our language，many should coincide in meanigg with words that alrealy belonged to It．Iu some cases，as in will aud testament，yearly and anmeat， begin and commence，ete．，the two words hare contiuucd to be used with scarecly any difference of meauing．But the tendency has been to turu the new mate－ rial to good account by giving to the words of each pair eenses more or less clearly distinguishal from cach other．In body avd corpse，lore and amour， work aod tracel，shecp and mutton，etc．，the distinction is a broad one：in bloom and flower，luck and fortunc，mild and gentle，win and gain，etc．，it is slighter and more subtile．The discriminations thus established have addeci much to the resources of the hanguage，giviug it a peculiar richmess and delicacy of ex－ presslou．

## THE ばGGISU POOR IN FORMATION AN゙D INFLECTION．

§45．Power of Self－development lost．The Enclish has lost a iarge part of the formative endings which belonged to the Anglo－Saxon．Dany which still appear In English are coofued to the particular words that now have 1hem，and can wo longer be used in the formatiou of new words．Only a very few（as－er，－ing，－ness，for substantives；－$y$ ，－ish，for aljectives；－en for rerbs； －ly for adverbs）continue to be used with mueh freciom for this purpose，so too，many prepositious and partieles which were one fredy employed as pre－ fixes in the formation of compomm verbs，are no longer uset in this way．From the simple verb to stond the Euglish makes understond and uithstent ；the Anglo－Saxon had ätstrnden，bestenden，bigstandan，forstanden，forestandan， gestandan，oflhstundan，understentan，wilhstantum，ymbstondran．＇This defi－ eiency in linglish is male up in a measure by the use of sequate particles，as，to stand up，to stand off，to stuml by，to stund to，ctc．Still the formative system of the languare las become greatly restricted．It no louger jossesses the unlimised power of development from its own resomecs which we see in the Anglo Sixou and in the modern German．If a new word is wanted，instead of produciner it from elements alrcady existiag in Euglish，we must often go to the Latin or the Greek，and find or fishion there something that will answer the purpose，liy this process our language is placed in a dependent position，being reinced to supply its needs by constant barrowing．Ifut it is a more serious alisadvantage that in order to express our ideas we are obliged to transtate then into ilead languages．The expressiveness of the uew term，that which fits it for its purpose，is hidden from those who are noacquanted with the classle tongrues； that is，in many cases，from the grent borly of those who are to use it．To them it is a group of arbitrary syllables，and vothing more．The term thms loses its suggestiveness，and the language suffers greatly in its power of quickening and aiding thonght．
§ 46．Freedom of Position restricted．It is one disalvantacre arisiug from the loss of intlection that our lagruage is mueli restricted fu the position and arrangement of words．The result is unforthuate，not only ns it tearls to monotonous uniformity of expression，but still more as it takes away the hest means of representing emphasls，or the superior fmportance of n partlentar word in the sentence．The simple Latin sentence，＂dlux regem decenit，＂may be nrranged in slx diferent orders without dolur viohnee to hatin hillom：the choice of oac orfer rather than mothere，if partly regulated by embliony or by love of varicty，is also much influened by the relative importane of the terms． lint the corresponding linglish sentence has its dixed，invarialle ordor，＂the general deceived the king＂：transposition would give it a wholly diffrent meaniag．It is true that we are able by a change from active to passise，the well as by other devices，tos socure varicty of expression，ans to satinfy the elomands of emphasts：thus＂the ling was deectrel by the gencral；＂＂It was the gen－ eral who decelved the king；＂＂it was the king whus was devived lyy the genernl；＂＂a deceptlan was practisel by the gemeral on the king，＂＂te．Still， with all such heips，we are often obliged to indieate by the elnmsy deviec of italis leters what a more highly fuflected tampage eoull have slown ia the position of the words．It should be said，however，in justice to the bineilsh， that it uses nearly all the freedon of arracenem1，whith，seamily inflected as it is，would be consintent with perbpienity＂．It is therefore superior in actual varicty of arrangement to the Fremeh，and perhaps not inferion to the more highly Inflected Geman，which in the ordinary prose style has limited its nat－ ural frecdom thy inconvenient and cumbrous restrivithas．
§47．Monosyllabism and Want of Euphony．The loss of inflection has redued a matiturde of Jogitish words fothe form of monoryllables．It the
not uncommon to fiud whole scutences which eonsain no wonl of greater length．This peeuliarity liclps us to uaderstand，better than most other vations are able to do，that primitive mouosyllabic coudition which must have preceded all inflected language－a condition which has remaned unchanged to this day in lagguages like the Chiucse，where every syilable is a separate word，with its own accent and its owu distinetly appreliended meaniug．If this monosyllabie character gives a ecrtaio plain directness amd pithy forec to English expression， it ean hardly be doubted that it is a disadvantage to cuphony and rhythm．Pope complains that＂ten low worls oft ereep in one dull line．＂Aud no one can read Chater＇s poetry，prowomeing the unnecented $e$ as the verse requires，and as it was actually prowouveed in the poct＇s time，without regretting that a lur－ ricd and slurring pronumeiation of our fathers should lave destroyed this pleasing feature of the old langunge．The suppression of this $e$ has also beca unfavorable to cuplony by producing，in a multitude of eases，the harshest com－ biuations of consoanants；as in hosts，breadlhs，texts，shifts，thirsts，butg（e）rt， starch（e）d，task（e）d．In these words，which can not be properly pronouneed without a strong effort of will and of vocal organs，the earlier dissyllabic forms， host－es，breadth－es，starch－ch，tash－ed，ete．，presented little or no difficulty of utterance．In most of these cases，as in many others，the harshness has beru aggravated by that extended use of the fianl $s$ ，which has given a peculiar sibi－ lating character to the prounciation of our language．In Auglo－Saxon，only a part of the nouns took $s$ in the plural，aud those ouly ia two out of the four cases：fo English，the shas been applied to nearly all plural nouus，and for all eases of the plural．Ia Avglo－Saxon，the verb iu the third person siugular of the prescut has th，nevers ：in the English of our day，this the is still oceasion－ ally employed as ato archnic form，but ia all ordiaary use a has takea its place．

## D1ALECTS．

§48．The English language is not spoken witl uniformity by all who use It． Nearly every county in fritain has its local diateet，its peculiar words ann forms，which are used ly the eommon people of the lower classes．This diver－ fity is，in part，of loug stanting ；in some poiuts，doubtless，it groes back even to Anglo－Saxon times．The great variety of local idioms is said to divide itself naturally into two main classes，the one belonging to the east and north of then Island，the other to the west aut sonth．For most of the dialeets，glossaries have beeu publishen，often with specimeu－compositions of greater or less extent；but only the scotch can be sail to have a literature．Seotish literatme， which is almost wholly poctienl，berins in the fourtcenth century，with Jolm Barbour，a contemporary of Chatecr．Itis long historical poem，entitled＇the lbruec，was followed in the early part of the next century lyy the Oriminald Chrongkil of Andrew of Wisnton，amd in its latter part by the Wallace of Itemry the Minstrel，often called Blind Hary．But the King＇s Quair，by the unforta－ nate James J．of Scotland，is not written in the seotish dislect．In flu six－ teenth entury we fiud，first，Gawin Douglas，the tramslator of the Ansith and author of the Jalace of Honour，and then two poets of higher genius，William Dunbar and sir David Lyntsay．In more recent times，the most eminent writers of this dialect are Allan Ramsay，the nuthor of the Cientle Shepherd， and，greatest of all，hobert limen．
\＄49．lu every dialect，appurently，there are preserved a certain mumber of old worde and forms，which have passed ont of use，or liave suftered alteration In the common lagange ；but it is manlly true that every dialect has lost or altered some which remain mehtaged in the common haterage．＇llus，if the Scatel liyc for cous，brali for broke，ete．，are rloser to tho Ahero－saxon than are the correspondiug linglish words，the contrary is true of gie for give，fie＇for fall， houl for hold，vima for will nol，etc．It is belisied that，on the whole，the common Energish stauds nearer that any of the dintects to the early form of tho laaguare．
§50．The linglish，as apoken by the eommon people of Ireland，has mauy preculiarities，both of somat and of ldiom，borrowed from the Gaelle，whels was once the lamguage of the whole islamt．
§51．Th Americ：wetters from diferent parts of the mother－eomery were brourgit torether in the same rolovies，so that no diatect of linglaul or scot． land has been preserved in its disthetuess on the new combent．At the same time，the migratory labits of the people lave hat the chtat of securiner a gemeral
 nesro aidect in the sombern States，it can hardly be sald that the re are fowl

 are contherl wholly to multivated pople：others to those who are not only
 sarily，used by perems of the highoet education．＇llhey also difire whely in thatr orghin．大iome are derived from the mative Indian languages，ns vigurem， squan，hominy，ete．；kome from the l＇rench，as letec，cretasse，bryou，cte，；tem from the Spanish，au rameho，comyon，stampetc，eto，；yet more from the Satcit， a：putrom，boss（mastor workman），stoop）（porch），cooky（kmall eake），cte Host of the foregoing word relate to thing that are ryecially Amerlear ：is express other oljects or relatoms of this kind，wew formations hate leen mabi from English words，as congressiomal，foderalist，milcage，mullincetion，etc：or Cinglinh words lase been usid in new meanligs，as cagle（coin），corauroy ：oad， to locate fand，ete．There are uther eases of new formation，which have no guch reason，at outsider，tatented，io ercutuute，cte．；or of new setnse＇s dor old words，

## A brief history of tire english language.

as to fix (put in order), to guess (think, believe), creele (small river), etc. Some words which onee belonged to the common language, but have become obsolete in Logland, are still heard in America, as fall (autumm), gully (channel worm by water), peek (peep), rare (uyderdone), ete. A larger number of Americanisms have come from the English dialcets, as bail (handte of pail), shack (worthless fellow), spry (nimble), to lam (beat), to slump (brak through snow or log), etc. And beside these, there are words and uses of words which are mere vilgarIsms, the laaguage of cant or slang, as to absqualulate (abscond), splurge
(pompous display), to fork over or shell out money, ete. A number of words will always be wanted to express what is peculiar to America io mature, socicty, and institutions. But apart from these, it is wot probable that Americanisms will ever be multiplied to any great extent. For, besides the active and inerpasing iatercourse with the other side of the Athatic, the almost universal hahit of reading, which finds exereise both in English aud American authors, will have a powerful tendency to keep the language, eveu of the poorer classes, iu substantial agreement with the common language of literature.

The following brief sketch of Anglo Saxou inflection is founded on Moritz Iteyne's Kurve Laut-und Flexionslehre der altgermanischen Sprachstämane, I? uderborn, 1862. The outlines of early English inflection are fouded on Eduard Fiedler's Wissenschaftliche Grammatili der englischen sprache, Lejpzig, 1si1, with much help from Prof. I'. J. Child's Obscrations on the Language of Chaucer (in Memors of the American Academy, New Strics, Vof. Vill.).

## ANGLO-SAXON INFLECTION.

§52. The Anglo-Saxon had seven long vowels, $\hat{i}, \hat{c}, \hat{\imath}, \hat{o}, \hat{\imath}, x, \hat{y}$. The tirst five appear to have been sounted as in ling. par, prey, caprice, prone, prame: ar was rrobably somuded much like ling. ai in fair. The sound of $\hat{y}$ apparently, like that of French $u$ and German $\ddot{n}$, was intermediate between $a$ and $i$. Tu these correspond seren short rowels, $a, f, i$ o $u, \ddot{a}, \eta$, wbielt were less prolonged in utterance. The short $i$ and $y$ are otted confounded in writing, us hyrde, shepherd, cining, king, but move sorrectly hirde, cyning. So, too, though less ofteu, the short $e$ and $\ddot{i}$, as rey, day, üft, again, more correctly diity, ejt.
§53. The combinations ea and co are often used for origioal short vowels, ca for $a$, eo for $i$, as beuld for bath, bold, seolfor for silfor, silyer. Wl:en they have the charaeter of genniue diphthougs, they are witten $e i, e \dot{ }$, which stand for primitive Tentonic $a n, i u$, respectively
§ 54. The two sounds of the English th are representerim Anglo-Saxon by distiuct letters, F for the whispered souod iu Eng. thin, breath, J for the voral sonnd in Eug. this, breathe. By a general rule - which some cditors make invariable - $p$ is used when the aspirate begins a word, 8 when it has any other position. Lo giviug Anglo-Saxou words, we shall write th for fy and dh for $\begin{aligned} \\ \text {. }\end{aligned}$
§ 5 . The Anglo-Sason never usea $y$ as a consonant ; but, apparently, ge, and eren $a$ alone, were sometimes used to express that somal, as in geoc, yoke, gie, yoll two. The letter $h$ before a consonimt, or at the end of a word, must hare had a stronger sound than in Einglish ; and $w$ in the same position must bave approached somewhat toward the sound of English 2 .
§ 50 . It is a deneral rule that a consonant can not be doubled either at the end of a word or befure or after amother consonant, as suram (for swamm), the swam, swimilh (for swinmalh), he swims, sende (for sendele), he sent, clite (for shitte), he persecuted.

## SUBSTANTIVES

## Vowel-veclemsiox.

§57. Masculines. Patadigms: fise (stem fisca), fish ; hirde (stom hirliu), shepherd.

| Sing. | Plur. | Sing. | Mlur. |
| :--- | :--- | :--- | :--- |
| Nom. fisc | fiscus | hirde | hurdas |
| Gen. fisces | fisca | hirdes | hirda |
| Dat. fisce | fiscum | hirde | hirdum |
| Acr. fisc | fiscus | hirde | hirdas |

§58. Feminines. Paradigms: gifu (stcm gifu), gift; datl (steur dadi), derd.

| Nom. | Sinc. <br> gifu | Jlur. <br> gitiz | Sing. <br> dised | Plur. diada |
| :---: | :---: | :---: | :---: | :---: |
| Gen. | gife | gifena | crade | dieda |
| Init. | gire | gifum | diude | diectum |
| Acc. | gife | gifu | dode, | cleelur |

§59 IVauters. Paraligms: srip (stem sripa!, slip; rice (stem ricin), lington.

| Nom. | Sing. scip | Flur. scime | Sing. rice | Plur. ricu |
| :---: | :---: | :---: | :---: | :---: |
| Gelu. | scipes | stipa | rices | rict |
| fit. | scipe | scipum | rice | ri.rm |
| Arc. | scip | scipu | rice | rien |

§ 60. Words of mose than one syllable which end in $\mathrm{cl}, \mathrm{cn}, \mathrm{cr}$, or, are often厄ywcopated before a case endin,r, as ealdor, mase., eider, pen. enderes ; ticen,
neut., token, plur. litunt: 80 , also, some others, as heifon, nent., head, piar. hereilu.
§ 61. Masculines und neuters of one syllable which lave the wowl $\ddot{i}$, take furtead of $\ddot{i}$ in the plural, is diig, mase., day, plur. duyets; fït, neut., vessel, plur. fatu.
§ 62. Alasculines sometimes have ena gr ant, instead of a, in the gen. plur. A few masculiues - as leode, men, Dene, Dans-have e in the nont are, plur. The masculioes föt, foot, tôlh, too:h, mum (gen. munnes), wran, and the fumiwines (nom, and ace.) boe, book, brôc, brceches, $g$ ôs, goose, ct, cow, las, louse, m凤s, roouse, burth (gen. burge, ilso burg, lyrig), town, fort, turf, turf, make in the dat. siug. and nom. acc. plur. fitt, têll, men, bic, brice, gîs, cŷ, lŷs, mŷs, byrig, turf. Sunu, son, nom. are. sing., maks suma in the geh, diat. sing, and nom. gen. ace. plur., summ, dat. plur. Trulu, mase., wood, is dreliued io the same way, but also with geo. sing. trules, uom, ace, plur, uhdas. The dants siog in $a$ is seen also in mase. wiont,r, wiuter, sumer, sumbur, feld, field, ford, ford, and fem. luthd, hand, duru, dons.
§ 63. Neuters of ond syllable which have a long vowh or end in two consovants. drop $u$ in thm nom. ace. plur., as lecif, leaf and leaves, pmm, pound and ponmls. In the same cases, the nonters $\ddot{a} g$, erger, cealf, call, cilk, child, hand. lamb, make igyou, cealfou, cildru, himbru, with iuserted $r$.

## N-DICLA:NSIOX.

§ 64. l'aradigms: mase, orf (stem bxan), ox ; fem. funge (stem fungrn), tongue; ment. mige (strm ecigan), cye.

| Singr. | Nom. | 11 ase. <br> $0 .{ }^{2}$ | Finn. <br> turite | Nut. rige |
| :---: | :---: | :---: | :---: | :---: |
|  | Gen. | orum | tung.m | crigun |
|  | Inat. | oran | trayem | cuyran |
|  | Ace. | 0.20] | tungun | crige |
| Plur. | Nom. | orat | timgun | erigan |
|  | ¢x.t. | aremz | tamycra | criyenas |
|  | thit. | oxum | cınyum | rigut |
|  | Ace. | oxun | tung.m | erigur |

§ 65. Of consonant stems ending in othor letters than $n$, the language hilg ouly iraces. Thus substantives in nd from present participles are deelined like fise ; but some of them make the num. nce. plur. like the nom. sing.; so helmberend, helm-brarer and helom-bearers, hut wealdend, ruler, wealdendis, rulers. Freind, friend, and feund, foc, make nom. ace. plur. freond, feomd, or frymb, fiynd, or freoud 1 , fromilus.
§ 66. Füder, father, is indeclinable in the sing. (gen, sing. rarely füderes): iu the plur. it is declinell like fise. Brôdhor, hrother, nom. gen. ace, sing. makes dat. brêther; plur, non. ace. brồlhru or brôdhar, gen. brôlhra, dat. brôdhrum; and in the same way are declised môlor, mothcr, dôhtor, danghter, sueostor, (dat. siug. suyster), sister.
§ 67. The fem, niht. night, and wiht or wuht, creature, thing, make the ace sing, and nom, ace, plur. like the non, sing. Feminime abstracts in oor a -as 3/do, old age - are indeclimable in the sing. : and so are fem. sa, sen, $x$, law, ed, water (geu. sometimes ses, cás), nom. ace. plur. stes, euis, dat. sam, cim.

## AIDECTIVES.

§68. Indefinite Declension. I'aradigm: uliml, blind.

| Sing. | Misc. | Fem. | Nent. | Plur. |
| :---: | :---: | :---: | :---: | :---: |
| Nom. | blind | ulind | blind | Ulimic |
| (icu. | ulindes | blindre | Ulindes | bindra |
| Itat. | Ulintum | uliudre | blindum | blindum |
| Ace. | blumbe | blinde | llind | ulinde |
| Ius. | blinde | wimare | ulinule | blindum |

§ 69. The instrumental case is like the dative, except in the sing. masc. and nent. In the plural, the three genders are alike, execpt that the neuter has $u$, instead of $c$, in the nom, and aec.: thus, mase. fims. blinde, neut. bindu. Adjectives of one syllable, unless they have a long vowel or end in two consonants, add a iu the nom. sing. fem. ; as smalu, from sinill, small: so, also, many adjectives of more than one syllable, which, howerer, sometimes take $e$, instead of $u$, in this place.
§70. The followiag peculiarities extend also to the definite declemsion. Adjectives of one syllable, which end iu a single consonant preeded by $a$, take $a$,
mastead of $\ddot{u}$ ，when a rowel follows in the inflection；ns，smizl，small，smillne， smälra，but smuth，smales，smalum，etc．，and def．smala，smalan，etc．Adjec－ tives of more than one syllable which end in el，ch，er，ig，are olten syucopated when a vowel follows in the inflection；as，fïger，fair，fäyerne，folgerra，but fägru，fügres，fögrum，def．fägra，fïgran．Adjectives of more thau one syl－ table which end in $e$ ，lose this $e$ before all endings；as，lidhe，blithe，wlith－es， lidhre，blilhum，blidhne，def．Widha，blithan．This last remark applies to all preseut partiejples．
§ 71．Adverbs are formed from adjectives by adding c ；as，suidhe，strongly， very，from swidh，etrong，hradhe，soon，from lerïdh，quick．Adwarlss in lice （Eng．ly）were first made by adding e to eompound adjectives in lic；as，healice， highly，from heilic，a compound of heih，high，and lic（gelic），like：but the adverb is often found where there is no adjective in lic，as sodhlice，truly，from soth，sooth，true．
§72．Definite Declension．When the substantive fo which the adjective belongs is definite，－as when it is counceted with the definite article，or with a demoustrative or possessive pronoun，or with a genitive case，and wheu it stands iu the vocative，－the adjective is iuflected according to the N－declension．

| Sing． | Mase． | Ferm． | Neut． | Ilar． |

§ 96．C．Several verbs which have the primary inflection iu the per feet and the passive participle，appear in their other forms as verbs of secoudary inflec． tion．＇Thus，biddan，büd，bedon，beden，ask，bid；sittan，süt，saton，seten，sit； licgan，läg，lagon，iegen，lic；thicgan，thah，thagon，thegen，touch，taste；hebban． hoff，hofon，hafcu，hease，lift ；Eucriun，swör，swüron，sworen，swear．All but secrion connect themselves with the first elass of scoondary verbs．
From fahan，halen，contracted fin，to take，hon，to bang，come pres．1．fo， hio ；？．fêst，ficst，fuhst；hist，hihst，hzst；3．fichh，faulh，fiehdh；hélh，hihelh， kavlh；pl．fidh，hoith．From the same roots，with added uasal，come fangan hangan，perf．fëng，heng．
The verb bringan，to bring，has two formations in the perf．and the pass， part．：brang，brangon，brungen，and brohte，brohton，broht；standan，to stand， drops $n$ in the perf．stöl，stödon，standen：brcgalan，to braid，brägd，bmagdon， brogilen，often drops the $g$ ，and passes from the 6th class to the 7 th，bredan， brëd，bradon，broden：thihan，to thrive，thäh，thigon，thigen，of the sth class， has passed into the form of the $9 t h$ ，thecin（for theoihan），theik，thugon，thogen： and the same is trac of sikan（scon），to strain，tihan（teon），to convict，wrihan （ureein），to cover．
§ 97．D．The following rerbs of secondary inflection are irregular：thenean， to think，perf．tholitc ；thyncan，to seem，perf．ththte；weorean，wirean，reyrcan， to work，perf．worhte，weorhfe；byegan，to buy，perf．bohte：gearnan，gymean， to prepare，scaruan，syrmean，to equip，perf．gyrcdc，syrede，but pass．part． gegyrucd，gesyrued．Baan，to inhabit，perf．bade，but pass．part．gcban：from the same root come bfian（bayan，bagian），biukan，of the zecond class．
§98. Missing Forms. The Anglo-Saxon has no future teuse, but uses the present tense both as a prescat and as a future. The verbs wille and sceal are sometimes used, as in English, to express the future, but fenerally not without the idea of volition or of uecessity, which properly belongs to those verbs.
The perfect defiaite and the pluperfect are supplied, as in English, by ueing forms of habban, to have, with the passive participle of the rerb.
The passive is supplied by using the auxiliary verbs wesan, to be, or weorthan, to become, with the passive participle. Thus com and weorelhe are used for the present passive; quas and ueardll for the perfect ; bed or sceal beon for the future com - worden for the perfect definite, and was - worden for the pluperfect.

## PREPOSITION: AND CONJUNCTIONS.

899. Prepositions are used with the accusative, dative, and genitlue: we give the simple prepositions, and some of the more important compound ones.
With the aceusative : geond, beyond, through ; thurh, through, by; yinb (ymbe), round, about ; agen, ongeàn, agaiast, toward ; abatan, about; ymbaten, round about ; widhatan, without; withinuan, within.

With the dative : ̈̈fler, after ; arr, ere; $\ddot{\text { t }}$, at; be, bi, by, conecrning ; fram, from;
ncäh, near ; of, of; 10 , to ; into, iato ; toweard, toward; beiffen (büften), behind; belteonan, on this side of; betrecox, betwixt ; bctwŷnan, between; bufan, nboye; batan, without, except.
With the genitive: andlang, along.
Witli the accusative and dative: for, for ; ofer, orer ; on, an, in, in, on, to ; odh, unto ; under, under; leforan, before; gemang, amongr ; tô geines, toward, against,
 motion to a place, the dative when rest in a place, is either expressed or impliet. Mil, with, takes the accusative, and also the instrumental, which generally coincides with the dative.
With the acensative, dative, and genitive: widh, with.
§ 100. The most important conjunctions are ac, but ; and, and ; bntan, unless; eic, also; clles, clse; ge, and; gca, gese, yca, yes; gif, if; hîru, at leart, yet; hucüt, 10, truly; heđ̈dher, whether; ne, not; na, no, nese, not, nay, no ; m, now; orlhdhe, or; swh, so, as ; swilce, as if; that, that; theah, thongh; thome, then, than; utan (with iufin.), let us;-for than the, beeause; for thy, therefore; mid thy, smee, secing ; to tham thät, in order that; thy läs the, lest; - ge . . ge, both ... and; agdher gc . . ge, both . . . and ; hweïdher the . . . the, whether . . . or ; nadher ne ne, acither . . . nor; orlhthe . . . othlhe, cither . . . or ; sam . . . sam, whether or; swâ... sư̂, so nะ, as.

## SEAIT-SAXON INFLECTION.

§ 101. For the sake of convenience, $\Lambda$. will be used for the earler text of hayamon, ll. for the later, and O. for the Ormulum. It is proposed to represent chicfly the inflection of A . In its characteristic fentures, adding at the same time the principal variations of 13 . and $O$.
§ 102. The Semi-Saxon retains in A. the Anglo-Snxon characters for the two sounds of linglish th: we represent them, as before, by th and dh. It, and $O$. have only the character for th. For the consonant $y$ round, the Semi-Saxon uses a peculiar character, 3 : this we represent by $\eta$, white the $y$ of the SemiSaxon MSS, will be given (as in A. aud B.) by $\dot{y}$. Instead of this consoanat $y$, $\pi v$ is often used, especially in B., as Latemon for Layanon. In Semi-Saxon, as in linglish, the Anglo-Saxon hw is writteu wh (yct in li. simply $w$ ) ; am in like mamer, $O$. uses $y$ h for $h y$, to denote the combiantion of $h$ with a following consonant sound of $y$. It must also be remembered in regard to the Ormulum, that by a uniform peeuliarity of orthography, a consonant is doubled where the vowel before it in the same word is short.
§ 103. If we compare the Semi-Saxon inflection with the Anglo-Saxon, we find, ns the most striking difference, that the vowels $a, 0, u$, in the olil grammatical endings, are all changed to e. Thus, the A-S. fiscas, fishes, fiscum, to fishes, carth, eare, oxtm, oxen, lufodm, they loved, become in Semi-Saxon fisces fiscen, care, oxen, lufelen. In $\Lambda$. the vowel $a$ is oceationally found in gram matieal endings, but irregularly and eapriciously used. Next to thls substitution of efor $a, 0, u$, the most important differenees are caused hy the frequent loss of a funal $n$ : thus, mill greatereheortc (A-S. midgrecitre heortan), with great heart; tha heye men (A-S. tha heihan men), the hight men. The commemeement of this change is seen in $\Lambda$., where the final $n$ is oceasionally dropped from mimy forms, yet not wholly disearded from nny; and, as a natural consequence, it is sometimes added to forms that have no right to it : thas, in the diat. slag. of the vowel-deel., than kingen (A-S. tham cyminge), to the king; in feminines of the vowel-deel. through most of the cases, ns, luych ( A -S. $\operatorname{lugnt}$, luge, lagit), law, laws In the nom, sing. of adjectives in $e$, as, he wes blithen ( $\Lambda$ S. he was blithe), he was blithe; and in the singular of verbs after e, ns, ic hablen (A-s. ic hïble), 1 hate, he senden (A-S. he sende), he seat. In 13. and O, where the omission of a final $n$ has become more fixed and regular, that letter is hardly ever misapplied in this way.

## SUBSTANTIV゙MS.

§ 104. It Is sometimes the case, cyen in . i ., that the acensative, looth fingis lar and plaral, is used in place of the dative; ns, than king (for than hinge), to the king, of linges (for of lingen), of kings. In li. this is much more frequent ; for the plural, at least, it is the prevailing uatege. In O. It has become the general rule: though the $c$ of the dat. sing. after a preposition is sometimes retained where the verse farors it (asto linge), yet it is oftener omitted; and the inflection, sing, nom. dat. ace. King, name, gen. Fingess, namess, pl. nom. gen. dat. acc. bingess, nampss, is the nsual one for substantives of all classes and gendors.
§ 105. Vowel-Declension. The normal form for the Masculine are:-

| Nom. | Sing. <br> king | ilur. linges | Slng. <br> mete | $\begin{aligned} & \text { lilur. } \\ & \text { uretes } \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: |
| Gin. | linges | kinge | metes | mote |
| bat. | kinge | kinger | mete | melen |
| Ace. | king | linges | mete | mules |

lut in the gen. pl., the more common ending is chr (or cn); as, lingene (or Kingen), for linge. (Compare A-S. detgena, for dhyf, of days.) For dat, pl. kingen, occurs also kinge, with omitted $n$; and in A. for dat. sing. Finge, orcurs also lingen, with $n$ Irrecgularly added. A few words slow th the nom. ace. pl. the enting ent (or e) irregularly brouglit in from the $\mathcal{N}$-declension.

For the uso of the aec. in place of the dat., which la common in lh, and ( 1 ., and for the gen. pl. In ess which is common in ()., see \$ 101.
§ 106. Sune, son, has in A. ged. sing. sune: umble \{B. uode), rood, has nom, ace. plur. wules or wulde; but otherwise they are regular. Men (or mon), gen. mannes, makes men is the nom. nec. (and sometimes the dat.) pl., but not in the dat. siog. ; the gen. pl. is manne and mannen(e). O. nakes siog. nom. dat. nes. mann, gev. manness, pl. nom. dat. aec. menn, gev. mentess.
§107. The Neuters, as in A-S., are declined like the masculiues, exeept in the nom. ace. pl. : lecre they are either without ending ; as, wif, wife, wives; lond, land, lands; or they take en (rarely c ), as in the N-dech, ; as, wifen, londe. But sometimes the ending es of the mase. is applied to the nent.; as, wifes, londes. In 13. thits is more common, and in O. it is the general rule ; yet eren O. makes shep, sheep, in the pl. as in the sing., while from deor, animal, it makes pl. deor; eler, and deoress. Prom chilel come wom. ace. pl. children (also childre in A., childres in D.), gen. childrene, dat. children. O. makes childre as pl. of child. and lambre of lumb.
§108. For Feminines the nomual forms are: -

| Nom. | $\begin{aligned} & \text { Sing } \\ & \text { layc } \end{aligned}$ | Plur. laye | Sing. dete | 1'lur. clede |
| :---: | :---: | :---: | :---: | :---: |
| Gen. | laye | layeme) | dede | dede |
| lat. | laye | layer | clede | deden |
| Ace. | laye | laye | dude | acrie |

For $n$ added in $A$. after fimal $c$, see § 103. Where the nom. slag. ended origin. ally in a consonant, e is generally added to it ; as, dexfe, for A s. deed, and the sul-fixes-inge, -nesse, for A-S. -ing, -nes. The nom. ace. Hl. Have also the mase. ending es : this is rare in A., but common in 13., nud nearly universal in O. : thus, B. lawes, dedes, O. lityhess, dedess (rarely dede). Boc, book, makes boc in dat. ace. siug. and nom, ace. ph. ; but bate also oceurs in nom, ate. ph. : IB. has bole in dat. sing., and bokes in nom, ace. pl. Burh, town, enstle, makes gen. dat.ace. ring. burh or burye (burhyc), nom. dat, ace. pl. buryes or lnyyen, gen. buryes but ln lis. the gen. dat. simg. is boreve, and the whole plural boreres. Weorld. world, sometimes makes the gen, in es.
§109. N-Declension. The nomal forms woukt be:-

|  | Sing. | ilur. | Sher. |
| :--- | :--- | :--- | :--- |
| Nom. | stale | steden | heorte |
| (ien. | steden | steden | heorten |
| lat. | steden | stalen | heortes |
| Acc. steden | steden | heorton | hoorten |

§ 110. Hut this atedensien is much disfogured by the omiswion of the dilul $n$, which is frequent in A., and marly universal in 13. For $n$ sometlmes added in A. to the nom, sing., fee § tus. In B. the nom. nec. pr, are commonty made in es, the mascuthe ending of the vowededed.; as stedes, steeds, heortes, hearts. In O. the peenliarlty of that dechension is wholly lost, ae we see in name, gen. namess, dat. ace. mame, pl, namess in all easen, lict from the ment. ryhe, cy", gent. cyhers, O. makes the Irreg. plo chne: A. aud 13. lave cye, gen. dut. cye( $n$, pl. irreg. cyenr(n).
§111. I'cond and freond make in nom, mec. pl. fcond, fricont, or frondes, firconeles, or firnde ( $n$ ), fromele ( $n$ ).
§ 112. Fituler, moter, brother, suster, duhter, hove the same form throngh: the sing., and lut the gen. ple; but the gon. pl. sometimes taker ene or ris 'llac other pharal casey have en (es in Ib, ess in O.). Iut for brodhereren, we dind also bredhe(e)ren ; and in O. brethee ls the only phural form of brotherr. 'I'lue c in brodher, suster, doher, is uftem lont before a case ending.
§113. THe fem. mom, aed. wiht, nifh, his milles the the gell, sing., vilhte in
 wilh. 'fhe fem. $x$ ', rumbing water, aud $s x$ ( 13 , sid), sea, are luleclinable in the singular.
§ 114. In proprenmes of mon, the genlife Caper his, for Caperes, is somelimes foumb in $\lambda$., oftener in $13 .:$ that his here is no real pronoun, ls evident from the want of any geniflve femintue similarly formed with hire.

# A brief ilistcry of the exglisil language． 

## ADJECTIVES．

；115．For the Indefinite Declension the normal forms would in：－

§ 116．Forthe Definite Declension they woulli be：－

| Nom．goile | gode | gode | goden |
| :--- | :--- | :--- | :--- |
| Gen．goten | goden | goden | goden（c） |
| Hat．goden | goden | goden | goden |
| Acc．goden | goilen | gode | goden |

§117．For $n$ sometimes added in A ．to forms with final e ，see § 103．On the other hand，$n$ is often omitted ia 1 ．from forms with final en，as gode for goden； and this is uniformly the，case in B．The endiogs es and re in the gen．sing．and 11．are little used in 13．，the forms gode and got heiog nsed justeat．By these elanges，the differeace between the definite and indefinite declensions became mach less distinet ；and it is aot therefore surprising that，even in A．，the one is sometimes ned insteal of the other：with the definite article the definite forms nre almost always used，but with otber adjective prenouns aud with the pos－ sessive genitive，it is quite common to find the indefimte．
§ 118．In O．the imdefinite adjective has only the forms god for the sing．and gode for the pl．；the definite only the form gode．Adjectives in $c$ ，as clene， clem，are therefore without juffection．Jat the gen．pl．allre，of all，is still found with the superlative ；as，allre firrst，first of all．
§119．The comparative ends in re，and las only definite inflection．＇f he superlative ends iu est，and is inflected both ways；but the indefinite superlative is podecliued in the sing．，and takes only e（in A．also en）in the ple
§120．Adverbs are formed from adjectires as in Anglo－Saxon：thins，swidhe， strongly，very，from swidh；hahliche（0）．hehlike），highly；rudher，soouer．

## IRONGLES．

§ 121．The personal pronouns of the lirst and second persons are declined in sing．，dual，and pl，as in Anglo－Saxon．The genitives are nearly coafined to the possessive use．The dual forms，though found in O．，are unu cel ia B ．We have in B．you，ou，and in O．yux，for eoue，eou：w O．y／unuc for ine．
§ 122．The prowonn of the third persun is thus declined：－

| Siog．Masc． | Fem． | Nent． | Ilnr． |
| :--- | :--- | :--- | :--- |
| Nom．he | heo（yeo，yc） | hit | heo（hi，hii） |
| Gen．his | hive | his | heore（hire） |
| 1at．him | hire | him | hicont（ham，yrm） |
| Acc．hinc | heo（hire） | hit | heont（hum，ynm） |

The forms in（）are those used in D．，which also often uses him for hine．Hare forms for the nom．ace．pl．are theo in A．，thare in B．O．has in the nom，sing． sem．yho（i．e．hyo），neut．itt；in the acc．sing．mase．himm，fem．hire，neut．itt ； in the pl．nom，theyy，gen，theygre（and heore），dat．ace．theyym（and hemm）．
§ 123．The possessive prowouas min，my，thin，thy，are declined as iadefinite adjectives，Before a consonant min，thin．sometimes become mi，thi：mire， thire，take the place of minre，thinre．But for all the forms with case－cudings， 13．has only mine，thine．The other possessives，mater（e），our（of two），inker（e） （0．yunnkerr），your（of two），ure or oure，onr，eover or cow（e）re（1）．youre，yure， O．yure），your，are undeclined．In O．hiss，his，is treated as an adjective，with pl．hise．
§ 124．The indefinite article an－which is only the numeral＂one＂applied to this use－is declined，both in A．and F ．，with the same peculiarities as min． 13．often uses on，one，for an，ane；but，when $n$ is dropped，it has $a$ ，wever $o$ ． A genitive ones is also found in E．，aad a gen．aness and dat．wnue are rnct with in 0 ．
§ 125．The definite article is thus decliucd：the forms in commas are found only in A．

| Sing．Jasc． | Fem． | Nent． | Ilur． |
| :--- | :--- | :--- | :--- |
| Nom．the | ＇tha，＇the | that | ＇thu，＇the |
| Gen．thes | ＇there，＇thare | thes | ＇there＇，thare |
| Dat．than | ＇there，＇thure | thatu | ＇then＇ |
| Acc．thenc | ＇tha，＇the | that | ＇tha，＇the |

＇The variations，most of them orthographical，are quite numerous：thus，in A．． thie for tha；that，thet，for that；thws，thas，for thesi thare for there，etc．：in B．， this for thes：in both，thon for than；thane for than and thene．Add theo for sing． tha，and thaic for pl．tha．
＇fhe form the is sometimes used in B．as an indecliuable article for all cases nud numbers．Traces of this nse are found even in A ．In O ．it has become general ；tloongh the antecedent of a relative pronoun takes，iustead of the，a demonstrative，thatt，tha，or thiss，thise．
§ 126．The demonstrative thes is thes declinct ：－

| Sing．Masc， | Fem． | Neut． | Plur． |
| :--- | :--- | :--- | :--- | :--- |
| Nom．thes | ＇thus，＇theos | this | ＇thas，＇theos |
| Gun．thisse（s） | thisse（re） | thisse（s） | thisse（re） |
| Dat．thisse（n） | thisse（re） | thisse（n） | thisse（n） |
| Ace．thisne | thess＇，theos | this | ＇thas．＇theos |

For thas，which is confined to A．，we find theos and thes lo both A．and B． For thisses，thissere，thissen，B．has almost always thisse．For most of the forms B．has also this used ns an indeelinable demoustrative；and traces of this ase are found even in A．
O．has Eing．thiss，this，pl．thise，these；white it makes also sing．thatt，that， pl．tha，those；approaching nearly to the later English usage．
§ 127．Swile or snule（13．soch），such，is deelined as an indefiate adjective． Ill，decliued with the definite article，is used for＂the same．＂
§ 128．The interrogative pronoun wha，who？makes gea．whes（only in A．）， dat．and acc．wham，whan，neut．nom，ace．what．These in 13，are spelled wo， wam，wan，wat．The use of this pronoun as a proper relative begias to appear in 13．and（1）．Whadher（IB．whther）is undeclinet．Fhite or tehule is declined as an indefiaite adjective ：in $\mathbf{E}$ ．it is writtca woche，and legins to he used as a relative．
§ 129．The relative pronouns in ．．are the and that，for all geaders and num－ bers，the latter being especially used in referenco to an indetinite or an omitted autecedent；also the（more rarely theo），in refurence chiefly to a feminine or a plural．In 13．and 0 ，that has taken the place of all the rest，and become the gcacral relativo．

## VEnDs．

§ 130．General Remarks．In the inflection of the rerb，the final of of the infinitive，the plural forms，and the fassive participle，often loses the $n$ in A．， gencrally so in lb，hut rarcly in O．For $n$ added in A．to forms that end in $e_{\text {，}}$ see § 103.
§131．The plural of the present indicative ends in calh（B．eth，A－S．ath）． Lhut in $O$ ．it has the eading enn，which came in，prouably，from the subjunctive and the perfect ；as，we hellpenn（A．aee helpcilh，IS．we helpeth），we help．Some traces of this en，nsed in the pres．ind．，appear to be found even in A．and 13． The Anglo－sixon nse of $e$ instead of all，when the verb is followed hy a subject pronoun，－as，helpe ace，－appears also in the Semi－Saxon．
§ 132．The dative of the infinitive in cnne（or ene），with the preposition to， as，to helpenne，－is oceasionally fonndinA．and B ．，rarely in 0 ．It is sometimes writtea with ende for cune，by a confusion with the active participle．But com－ monly the preposition to is prefixed to the infuitive in en ；as，to helpen．
§ 133．The active participle is siogularly iofrequent in the Semi－Saxon；and， partly perhaps on this account，hecame confounded with the verbal substantive in inge．In A．the old termination ande（or inde）is still the prevailing oue for the participle；but in B．inge occurs about as mady times as ende．
§134．The passive participle very frequently takes the prefix $i(1-3, g e)$ ． which，however，is not confised to the participle：thus，iboren（A－S．geloren）$=$ boren，born．She this prefix is searcely at all need in 0 ．
§135．Verbs of Primary Inflection（Strony Verbs）．The ten classes of the Auglo－Saxon are more or less confounded，as will appear from the follow－ ing specimens．We give the infaitive，the singular of the perfect，the plural of the perfect，and the passive participle．The vowels are given according to 0 ． where they nre written more consistently than in A．and 13.

1．halden，hehl，helden，halden，hold．
fullen，fill，fellen，fullen，fall．
11．lěten，let，leten，lëter，let．
slipper，slep or slepte，－，一，sliep．
III．haten，het or kehte，hehten，haten，bid．

IT．hesen，he（o）w，he（o）uen，hewen，hew
V．wepen，weop（O．wēt $\ell$ ），一，一，weep
V1．finden，fond，funden，fienden，find． delfen，dalf，dalfen，dolfon，delve． biginnen，－gan，－gunnen，－gmmen，begin．
VII．nimen，năm，nomeen，numen，take． yifen，y̆̈f，yrefen，yifen，give． beren，bür，lierch，boren，bear． cumen，cöm，comen，cumen，coms．
VIII．drifen，elraf，drifen，Arifen，drive． uriten，urat，writen，writen，write．
IX．buyen，孔ak，buycn，bayen，bow． luken，lec，lư̈en，loken，lock．
x．faren，for，foren，fircn，fare．
тахеп，wex，wexen，waxen，wax．
druyen，itrok，droyen，drayen，draw．
Most of these forms appear also in A．and B．，but accompanied often by othet modes of spelling．Thas，in some eases，o is used for $a$ ，and co for $\epsilon$ ；as fond， ligon，nom，drof，wrot，for fand，ctc．；wcox，weopen，for wex，wepen；holde， cnowe，B．，for halden，chaveen．In B．，e is used for $x$ ，and sometimes on for $a ;$ as， hew，yeaf，for hwacen，yof．Iu A．，$a, x, e$ ，are much coufounded；as，halden heltlen，hclden．
§ 136．Paradirm：helpen，to help．

## EARLY ENGLISII ININTEC'TION.

§ 147. The periods in the history of nur language which are known as the Old English nod the Middle English, differ chient it the voenbulary: in grammatical points they are not so far ualike as to require a sophrate treament. The ean be briefer here, ats the inflectional systrath is mow refluced more uearly to its modern proportions; and in the Ommbum, which stands at the cluse of the Sem-Saxon period, we have nlrealy seen mued of what is most striking in carly English inflection. 'Jhe ohjeet will be to represent espectully tive lathate of Chaucer in its chararteristic features.
§ 148 . It must be olserved at the nutsid, that the unaceential fimal $r$, whild is sitent in modern Jigglish, was generally pronounced by chaneer. A multitnde of spparent execptions are aceomated for by noticing these two jeculiarisies the
 a vowed at the bearming of the arxt word; and this mon takes place, even When the mext word is a pronoun or mberb with diblial h, or a form of the verls
 blle, ita $c$ bedng suppressed, woperally where a rowel or $h$ follows in the next word; and sometimes an unaceentel final en or eth is treated in fle same way. Many of the exceptional casen are mulountelly atributable to varatione and corroptians introblaced by the thaneribers.

## 

§ 140. Nominative Singtar. Where the Anglo saxom fod a fimal vows

| (d) | $\begin{aligned} & \text { Pres. 1, } 3 . \\ & \text { dar } \end{aligned}$ | $\begin{aligned} & 2 \text { Sing } \\ & \text { elerrst } \end{aligned}$ | l'lur. <br> durren | Perf. <br> durste | dare |
| :---: | :---: | :---: | :---: | :---: | :---: |
| (c) | scell | scall | srulen | scolile | shall |
| (f) | may | milht | mosyen | mihte | may |
| (r) | ch |  | riycn | ralie | Own |
| (l) | wrut, wot | wrast | witen | wiste | koow |
| (i) | dieh |  |  |  | avail |
| (j) | mot | mole | moten | mosie | must |

The verb ( $k$ ) aullen, to will, maker pres. 1. wrulle, vulle ( $=$ ne wolle, will not, 2. woll, nuit, 3. wolle, mulle, ,h. wulledh, nullvilh, perf. wolde, nolde. In the pres. B. has wolle, nolle, walt, nolf, ctc. ; and O. whe, nile, will, nill, pl. willcun. nilenn.
§144. B. (a) The verb of existence is thas declined:-

In F. and 0 ., eo is often contractelt to $c$; thus, $O$. has best for beost, and be, ben, beth, as well ns beo, beon, beoth. In the perf., O. writes werc, wateren, insteml of were, weren ; but, in the ind., atl sing. it hatauss, wert. The plural, sunden, is not fomed in J., which uses beoth, brth, instrad. O. has simetem, but uses also arrn (Eng. are). The smbj. si is still fomm in $O$.
(b) gan, il. inf. gamuc: pras. (1. gat, 2. gast (0. gast), 3. gedh (0. gath), pl. gadh, $g a(0 . q a n)$; impr. $g \pi$, pl. $y$ gath ; p. act. gaminde (1i. goinde, goinge), pass. gan. In all taese forms, Ib, has o for a. A verb yoongen (Ib, yongen, O. garm. genne is also used in the present, and A. and 13. have a jerf. gongde or geinde. The common lerf. is corle ( F. yeold, $\mathrm{O} . y \mathrm{chl}$ ). In frequent nss, also, is the perf. uende, went, from the rogular verb wemden.
(e) don, dl. inf. dame; pres. (1. do), w. dest (1). O. dost), 3. dedh, dodh, pl. dodho (O. done) ; imp. dlo, pl. dodh; perf. dede, dlude (O. dite) ; p. aet. donde, pass. don. §145. C. Several verbs watlate between primary and secondary inflection; as, perf. beh or boycde, froun bwyen, to low, perf, for or ferde, from furen, to fire ; perf. pl. heo clumben, B. hii clomden, from climben, to climb.
The verbs fon, to take, hon, to hang, make present forms from these roots; as, underforlh, they undertake; but from fangen aul hanyen, the perfects fothg, heng. The verb stamten (O. stannlemn) makes jerf. stod, 1 l. stoden, jurt. stonden (O. stanudenn).
§ 146. 1. The following verbs of secombary inflection are iremalar: fhers ehen (O. thennkenn), to think, perf, thehter, 1nart. thoht; thancheth (0). Thimn-
 part. wroht (in A. also worlite, worht) ; buggen (0. bigycmen), to huy, prer. bohte, jart. boht ; bringen, to bring, pref. Inohte, bart. broht.
oxe, herte, ecre, herde, lume, chle (AS, wa, ox, heorte, lwart, rire, ear, hired, (khep) herrl, lagh, law, ghle, age). Even where the Augle-saxou had a timal con. sonant, most fominince words hase an added e: as, deat, sorme, youthe (. . . . diad, dod, sork, Borrow, geigulh, youth); but the verbals in ymg do mot mewr-

 sontmes, in writing: thas, herte is sometines treatid as one syllable, and sometimes writtom hert.
§150. Genitivo Singular. The mern, king. emis ln cs; ns, Ringos, names,

 tion; as, myn herte bowed, his lody !rocer, hir fuler hors ; mut heren ling, i.s. henfon ryming, is properly a compermil wat.
§ 151. Dativo and Accusativo Simgular. 'The ace, kine is always liko

 veren ; as, to bedhe, with gwher, in honse, out of his sleçir, from licd, gold, hous,

 srim, trif, maman, hrorfan). In (hancer the phiral offin cmis in satome (or es

 aishes), shoon (also whoos). ctr.: while mume others take $n$ ly mistakem matogy,
as bretheren, sistren (also sustres), children (also chitdre or childer), kyn (kine), cte. Some worls, which were of nenter gender in the A-s., make the plur. Sike the sibg.; as, pl. deer, gond, sheep, stein (swine), folli (or folkes), hors (or norses), thing (or thinges), yer (or yeres). The plurals with change of rowel are feet, gees, men, teeth, etc., as in modern English.
§ 153. If the ending es (or $s$ ) is not used in the nom. pl., it is added to form the gen. pl.; as, folkes uyles, mennes soules, wymmens counsciles.

## ADJECTIVES.

§ 254 . Adjectives are inflected as in the Ormulum : the pl. of the indefinite alijective and both numbers of the definite end in $c$; as, yong man, yonge men, the 2ronge mon, the yonge men. In Chancer this inflection is contued to monosyllables; all adjectives of two or more syllables, and of course all adjectives that cod in $e$, are minflected. In oceasional instances the indefinite adjective takes e in the siug., especially after prepositions or before names of persons. On the other hand, e of the inclefinite plural is sometimes omitted, when the adjective 1s a prediente; as, they were glad: the predicate participle is almost always tindeelined.
§ 155. Chaucer has a remnavt of the old gen. pl. judef, in aller or alther, of all ; 2s, at your alther cost, alther best.
§156. The comparative and superlative are formed as in moderu luglish. Superlatives of one syllable are inflected; as, the beste mon, his laste worl. Chage of vowel is seen in lenger, from iong; strenger, strengest, from strong: eluler, eltest, from oll.
§ 157. Adverbs are formed from adjectires as in the earlier limguage; cither with the endiar $c$; as, brighte, faire, harelc, longe, from bright, fuir, ete.; or with the cading ly (A.S. lice, Semi-Saxon liche, like); as, shortly, sothety, sikurly, specially, from short, soth, ete.

## MRONOCNS.

§ 158. In the first person, Chancer has $I$, maty $y k$ and ich (for A.s. ic, which is still foum in Otd Eng.). In the secom person, he has thon, ye, you (which are found also in Old Evg.), for A-S. thu, ge, eou. The flual forms are no longer met with. In the third person, he has

| Sing. | Mase. | Fom. | Notst. | lhur. |
| :---: | :---: | :---: | :---: | :---: |
| Nom. | he | she | it | they |
| Gen. | his | hire | his | here |
| 1nat. | him | hire | him | hem |
| Ace. | him | hive | it | hem |

The forms hire and here were pronomed hir, her, and were sometimes written so. It the Ohl Eng. we still find heo in the nom. siug. fem., and her or hi, hit, in the nom. plur.
§ 159. Leflexires are made in Chancer by adding self; or selve, or selven, to my, thy, him, hir, our, your, hem ; as, mysclf, mysclec, myscheor, ete.
§160. The possessives myn, thyn, in Chameer, retain $n$ before a vowel or $h$, seldom before other consonants : they retain it also when used absolutely, i. c., after the substantive, or without a substantive, or as predicates, in which cases, too, they armit of inflection; as, chihben myme, thin be the gloric, neghetone of myne. The possessives oure, youre, are pronounced our, your, and are sometimes written so: when used absolutely, they usually take s : aurce, ? foures (in tiro syllables). Hire, her, and here, their, have the same absolute form (heres).
§ 161. Aroong the forms of the definite article which we have seen in the Semi-Saxoo, there are some that appear oceasionally and irregularly in ohd Euglish ; but the one form the is generally, and at length constantly, used for all genders and numbers. The indefinite article an gives up its $n$, exeept before a vowel or $h$.
§ 162. The demonstratives in Chaucer are sing. that, pl. tho, and sing. this, pl. these (provounced as one syllable, and sometimes written thes, this). That in that oon, thut other, sinks from a demonstrative to a mere article.
§ 163. The interrogatives are who, whet, whos, whom, which, whether, used as in moderu English.
§164. The common relative in Chaneer, as in the Ormulum, is that for all numbers aurl genders. Instead of that, we sometimes fimt which that ; as, Creon, thich that was of Thebes hing. Which itself, or the utheche, is used as a relatire, but chicfly after prepositions or in agreement with a substantive following. Wc fiod also who, whos, whom, nsed as relatives; but thry are comparatively rare.

## rerbs.

§185. The rerbs of primary inflection (strong verbs) are now greatly reduced in number, many which onee belonged to this order having taken up the secondary (weak) inflection. In those which remain, the classes lave become much obscured and confounded, as will be evident from the following examples, in which are given, as before the infiuitive, the singular of the perfect, the plural of the perfect, and the passive participle:-
I. holden, held, helden, hohen.
fullcn, fel, fillcu, jaller.
11. Ieten, lect, lecten, let.
slepen, sleep, sleqpen, slept.
151. linower, lincu, fincten, linowcir.
IV. beten, beet, beeien, beten.
V. wсреп, weep, wссрен, wept.
V. finden, fond, fonden, fonden.
helpen, halp, holpen, holpen.
kerren, carf; corten, corven.
biginnen, gan, -gonnen, -gonneno
V1I. giten, gaf, gaven, given. beren, bar, beren, boren. speken, spak, specken, spol:en. comen, cam, comen, comen.
Vill. risen, roos, risen, risen. elriten, drof, driten, driven. writen, verot, writen, ariten.
1.5. cliescn, checs, chosen, chosen. crepen, creep, cropen, cropen.
I. shapen, shoop, shopen, shapen. raxen, wex, wexen, wихen. drawen, drough, irowen, irateen.

We also tind slepte, wepte, crepte, secondary perfects for sicep, veep, crecp; also fond, bigon, for from, vigan, and founden for fonden. In the forms of raxen, a and c are much confounded, add a participle woxen is met with. Chaucer and others often use $y$ for $i$; as, fynden, bygymen, dryven; or e for $i$; as, geren.
§186. Final n. In the inflection of the rerb, the fimal $n$ of the infinitive, the plural forms, and the passive participle, is omitted with great freedom : thus, to maken or to matie, we knowen or we knowe, they sayden or they sayde, founden or founde. An unaceented $c$, hefore the omitted $n$, is generally sounded in Chaucer, but was sometimes dropped in promuciation, and oceasionally so in writing; as, to let, they sayd.
§ 107. Present Indicative. The first person singular still ends in $e$, which in Chaucer is generally sounded ; as, $I$ saye, $I$ knowe. The est (or 8t) of the second person singular occasionally drops the $t$; as, thou he has (for kast). The third person singular ends in eth, from which $e$ is sometimes omitted; as, telleth, comth. The 3 d sing. in es or 8 is not frequent in Chaucer. Where the root ends in $t$ or $d$, contraction generally occurs; as, sit for sitteth, byt for byddeth, stant for stende th; aud in like manner rist for riscth. In the plural the old encling eith is still fombl in Chancer ; as, are loveth; but the common termination is en (or e); uc loren (or lore).
§168. Perfect Indicative. Verhs of primary inflection make the sccond person singular like the first and third; as, thou bar, thon spak, thou swor: but a few instances show the old ending e; as, thou zere, thon garc ; and a few others slow the eccondary est ; as, thon fincwest. The plural has en (or e).
§ 169. Verbs of secondary inflcetion. add de to the root, cither immediately, as, sayile, ansurerte, or with a connceting $e$, as, weddede, servede. In the former case, tle after $p, k, t, s$, or $g h$, bceomes te; as, kepte, mette, Riste: alight-de is changed to alighte, fust-de to fuste, send-de to sende or sente, ucond-de to vente, and the like. For other changes, see § 181. The final e of the 1st amd $3 d$ sing. is often dropped; as, seyd, lored, went. The ed sing. has est, the plural en (or c). §170. Subjunctive. The subjunctive ia both tenses has e in the three persons of the singular, and on (or e) in the plural.
§ 171. Imperative. The singular of the imperative is the same as the root of the verb; ns, spet (speak), ber (bear), com (come), gif (give). J3ut verbs which tave ede in the perfect take $c$ in the imperative; as, love, aske; and this is true of some others also; as, bygynne, tclle. The plural ends in cth (or th) ; as, cometh, elrancth, saith, goth, beth: but in Chaucer this evding is oceasionally reduced to $c$; as, holle (for holdcth) ; and is frequently omitted altorether ; as, tel (fo: tclleth), tak (for taleth), let (always for lettcth).
§ 172. Infinitive. The Infinitive ends io en (or $n$ ), but often drops the final $n$ as, helpen, giren, clon, ben; or helpe, gite, tho, be. A few forms in Chavect, like to cloone, to sayne, appear to come from the old dative case of the infinitive.
§173. Participles. The oll ending for the active participle, A-S. ende, Scmi-saxon inde, is still found in the Old English; as, wepinde, weeping : crea Clanucer has it in a few instanees uirler the form and; as, lepanel, leaping. But it has to yicld more and more to the termination inge or ing (Chancer yng or ymge), which, in the Anglo-Saxon and other Teutonic langunges, belongs solely to the abstract nouvs of action.
§ 174. The passive participle of primary inflection frecly gives up the final $n$; as, comen or come, songen or songe. It is thus often omitted in Chaucer from participles that always have it in modern Euglish; as, given and gite, gon and $g o$, ben and be. The prefix $i$ or $y(A \mathrm{~S} . g e)$ is often used by Chaucer before this participle ; as, $i$-malied or $i$-mand, $y$-brent (burnt), $i$-scriten, $v$-corve (carvec), $i$-be (been); seldom before other forms of the verb.
§ 175. Primary Ivfiection: helpen, to help.

*** Then one letter of an lmproper diphthong, or of a friphthong, is marked, it is to be taken as representing the sound of the comblastlon, and the lettor or letters which are not marked are to be regarded as silent ; as in äm, ctean, cēil, pēople, rọte, sōul, joarnal, tōv, \&e. The combined letters ce, ci, sci, se. si, or $t i$, occurting before a vowel in a syllable immediately preeded by an aceented syllable, are generally equivalent to sh; as in o'cean, ecta'ceons, so'cial, logi'cian, suspi'cion, auspl'cious, con'science, nau'seous, controver'sial, dissen'sion, ini'tial, ora'tion, fieti'tious, \&c. Such syliables ase not always respelled, as, in general, Hey will naturally be pronounced correctly by an English speaker. Eut in all execptional, doubtful, or diffeult cases, the appropriate respelling is used.
** For an explamation of forefgn sounds occurring in the Dictionary, see pp. 163t, 1633.
RESPELLING FOR PRONUNCIATION. - (1.) In respelling the French an, en, on, \&e., the letters ng are not to be pronounced themselves, being designed Elmply to mark the vowel as nasal, that is, as pronounced through both the nose and the mouth at the same time. - (2.) The respelling of a word, vhen a number of related words follow, applies to all or them dowa to some other word which is respelled.

REFERENCES. - The figures which immediately follow certain words in the Vocabulary refer to corresponding sections in the Principles of Pronunciation
ACCENT. - The principal aecent is denoted by a henvy mark; the secondary, by n lighter mark; as in Su'perintend'ent. In the divislon of words into eyllables, these marks, besides performing their proper ofice, suprily the place of the hyplien, exeept in some compound and derivative words.

# PRINCIPLES OF PRONUNCIATION, 

WITH EXPLANATIONS OF THE KEY.

## VOWELS.

§1. The vowel sounds in monosyllables and accented syllables are marked in the Dictionary by pointiug the letters accorting to the Fey. Fach of the vowels will now be considered under three heads; viz., its regular long, and short, and its occasional sounds, as heard in monosyllables and in necented and unaccented syllables.
I. VOWELS IN MONOSYLLABLES AND ACCENTED SYLLABLES.

## A.

§2. Regular long sound, marked $\overline{\mathbf{A}}, \overline{\mathbf{a}}$, as in ale; heard nlso in puin, dūy, gи̃ol, gū̀ge, त̄yc, brē̃k, veil, whey, se.
Note. - This sound of $a$ is in most eases diphthongal, having a slight " vanlsh" irs $\bar{e}$ annexed to its "radical" or initial sound, as in pay, where the $y$ may be resarded as representing the vanish. Writers are not agreed as to the nature of the radical part, some considering it to be the sound of short $e$, while others nesert that it is a distinet, though very similar, element, being, ilke the other long vowels as compared with their true corresponding short sounds, of a slighty less open quality. - See §11, and $\$ 8$, Note.
§3. Iegnlar short sound, marked $\overline{\mathbf{K}}$, a , as in add; heard atso in platu, bude, de.
Note.- This is a distinct element from the long a. like the other shut or
 nbrapt, explosive charaeter, whith is hardly found in any languase but onr own. With respect to its position in the scale of sounde, it is a palatal sowel, intermediate between $\ddot{\ddot{a}}$ and $\bar{e}$, the tongue being raised higher than for $\ddot{\ddot{u}}$, and nol so high as fore $e$.

Occasional Souxds of A.
§4. Sound of a before $r$, in such words as air, care, fare, bear, praycr, parent, marked $\mathbb{A}$, at. The letter $e$ bas the same sound in a few worls, such as there, where, their, heir, dec.
Two errors in opposite extremes are here to be avoided: 1. That of the vulgar, who pronounce where, whar; bear, bar; care'ful, car'ful, sc.; '. That of some nmong the educated classes, who pronounce puir, parent, \&.C., ns if shelt piycer, pray'rent, de. As to the latter error, Mr. Smart remarks in a private letter, "This is not English promanciation: it is a peculiarity of the Scoteh ; " and, we may adn, of the Irish and many Americans also.
Some have considered the $a$ in care as a distinet element; this, howerer, is not admitted by Smart, who mantains that it is one long a in fute, anm owes all its pernlarity to the subsequent $r$. Such, also, is the statement of tro Webster nad most English orthoëpists. The sound of $r$ in thene words is what Smart calls a "grattural vilhrition," - a smmid whell he represents by ur, and 1)r. Webster by er. In care we toneld lightly on the ä sonul (the redical atone, without the ramish; sue $\$ 2$ ), and then pass fully amd strongly into the guturul vibration (cā'uror cīt cr), drawing the two as (lowely ats possible into the same sylluble - so closely that Smart (not aiming nt philosophital "wactness) speaks of the $r$ as actually blending with the previons vowel. In like maner, perent is somaded $\overline{a^{\prime}} u r$-ent or $p \bar{a}^{\prime}$ er-ent $;$ nad fuiry has the sound of $\sqrt{a^{\prime}}$ er-y. as the word was netually spelt by Spenser in his "Puery Quecul." Smart refers, nlsn, with approbation to noother moie of identifying the Nound fin thestion; viz., that of prolonging our short e besore $r$. 'Thus, fher (with the e as in thén), drawn mut intu long quantly, gives us there (thar); and or (the frat kyltahle in irror) pfoes us ere or e'er (arr). Thus, in the visw here presented, the initial sound whond aiways be that of a in fute (the radical without the vanlal!; Ree § 2), thongh thas final impression upon the ear is that of an open or broad sombl, in comseyu-bee of the "opentng power" of the $r$. In primitive words like flere, lair, petir, mat the others mentioned nbove, it is very fimportant not to dwell sos long on the a ns to make it diphthongal; for, if the close vanishang chement of the vowel is retained, it is impossible for the open $r$ to blend with it in the smme syllable. But in derivative woris like fayer, lenyer, payer, it is assuntha for pesurve the terminational sound of the a, in order to keep np a disthetion between the two classes,*
Some, lnwever, especinlly in New England, give these words a slifittly different sond ; viz., thent of our short a before the $r$, its air, promonnewl acr, whts.

[^1]In somewhat lengtheged somed of the $a$. So harry, with the first syllable protracted, gives ushairy. 'finis sound is rather more open than the one mentioned rbove, ind is apt, in the mouths of our common people, to become too broad nad coarse. If well executed, however, it is fearcely at all inferior to the other in smoothness and grace. It is irequently heard among the well-educated in England; there is a tendency in many to iutermingle the two, and it often requires n nice ear to determine which is used. Dr. Webster, who adopted the former in his own practice, onec remarked to the writer, that he regarded the diference as unimportant, provided the New- Euglind sound be given without eoarseness or uadue breadth. Those who nttempt to unlenra it, and adopt the other sound, need one eantion : they nlmost uniformly go too far, and fall into the peculiarity of the Scotch, so pointedly condemned by Smart.
§5. Sound of the Italian $a$, marked $\ddot{\mathbf{A}}, \ddot{i}$, tas in ürm, füther, für ; heard also in ̈̈h, heärth, ̈̈unt, gürtl, ̈̈re, \&c.

Note. - This eond ocenrs, in monosyllables and in necented syllables, before $r$ final or $r$ followed by anotiser consonant (as in scar, tar, fart, yard, de-bars ${ }^{\prime \prime}$, de-part'), and in the derivatives of such words (as in scarred, turry, of, or resembling, tar, debarring). IBut when a oceurs, in an acemted syllable, before $r$ followed by a vowel or by another $r$, in a word not a derivative, it has its regular short sound, as in arable, barroke tarry, to delay.
The Italian a is the most open of all the vowel counds, nith is one of the extremen of the vowel seale, the otherestremes being $\bar{e}$ and $\bar{o}$. In its formation, the mouth
nnd throat nre opencel widely, nud the tongue is left in its natural tosition of nnd throat are opencel widely, nind the tongue is left in its natural position of rest. It was formerly much more enmminn in English than it is at the present day. The loss of it to so ereat na extent has been an injury to our language, and my further exclusion of it is therefore underirable. Heace the tendency to pronounce the worl heürth, hurth, ought to be rapressed.
\$ 8 . Sound of et in certain words (chidfy menosyllables) eading in $f f, n, s s, s t$, sti, spl, with a few in uce and $m$, marked $\mathbf{X}, \dot{d}$, as in staff, gritft, púss, list, üsk; gissp, chince, chint, \&e.

Note. - Down th the close nf the last century, words of this class were untverfally pronnunced with the full ltalian a. some, especcially among the vulgar, gave this too broally, or with a kint of drawl (as pass like parse, fust like fierst, - withont somulng the $r$ ), so that Walker, disgusted hy this alnise, and having a prejudice ngainst intermediate solnds, marked all such words in his Dietionary with the sound of ghort a, kiving the vowel in prast, stuIT, se., the sound of thit in $p$ ăt, Stuff (the filand), Ne. It will not bo surprising - if wu bear in mind the remarli in 83 on the extreme shorthess anil abrupthess of this sound - that this change was strongly condemmel by the orthotpists. Jones declared it to bo "a mincing affectatinn:" snd Mitford Aud, "No Ehulifh tongue fails to express. no linglish car to percedve, the ditf rence between the sound of $a$ in passing and in pässime. No colloguith fimilharity whl substitute the ons for the other." Still, the hish character of Walker, and the thereasing disgost for every thing like a drawl in gapaking, pave currency to the chatage. It prevalled in London, nad in some of the hatger citics of Americis, unth there sprung up, on both sides of tho Athante, what smart has culled is "new school" md an "olit school" ont thits subjoet. The extreme shorthess of the u, as marked hy Wiaker, was still nhjected
 this ancomint, siying, "lle alliwn no compromise between the brnad ltalian of whth which atylgar mouth pronounces ass, and the sound marnwer (If fossible) than the $a$ la af, with whinh an affectell speaker minces the samo paskile
word." It claws, saying, "We nre "h, aven in London, to give $n$ slight protongation to the

 phat, josh, \&c. Smart mates, however, Sil a reeent letter, that ln England hite prolongation is now wholly laid ushl". "Custom with us," he remarks, "in

 We or sixty years of age" In other words, Walker's extreme short sbund if
 the true nud only proper nombl.t
The change fintroluceal lyy Wialker never had any great eurrence in thit

 example of the lonk lanlan sound (as la futher, Ac.), and "lust" of their sluert latian stand; ami mark swith tho lattir the emfire claph of words now under

It also appeara from Mr, Smart's letter that when be apoke of the nbove-
 the short a in at, he reforred simply to tia quantity, the solnt being the sans In quatity wh that of short a, and simply a "prolongation" thereof.
(xli)

## PRINCIPLES OF PRONUNCIATION.

cunsideration, such as staff, graft, pass, last, ask, gasp, and a few words in nce and nt, as drmce and chant. In this way, they guard against that undue prolongation of the it which offended Walker, and still retain in use one of the finest sounds of our language. This is the sound recommended in this volume, and marked $\mathbf{A}$, in. Some ruight possibly prefer one a little less open, verging Alightly more toward that of $a$ in an i and there is certainly room here for a diversity of taste and practice among those who agree in the maio point of rejecting the extreme shortness of Walk'r's sound. If it be proposed, however, rejecting the extreme shortness or walk to give these words a sound intermpliate in qualty between the tanan "a and our short $a$, one thing is important to be considered. Mr. Smart states, in anewer to an inquiry on the sulject, that, although he can cxemplify such a sound, he is not aware that any thing of the kind is used amony the educated classcs In England. The only alternative there seems to be between the Italian $a$ and the extreme short sound of Walker; and it is natural and desirable that those among $u s$ who reject the latter should adopt the same sound with those who led the way in that rejection upon the other side of the Atlantic. Any one who heard the lectures of Mr. Thackeray during his visit to this country in 1855-6, and noticed his pronunciation, with reference to this subject, must hare been atruck with the definite sound of the Italian $a$ which he gave to all words of this class. IIe even gave that sound in the word enswer, which, though common in England, is comparatively rare in Ameriea. A gentleman who held for many years a high diplomatic station at the court of st. Janes, wold the writer that, execpt among Londoners, he almost uniformly heard the Italian $a$ in such cases, especially among the oflicers of government, and the aobility and geatry with whom he was led to associate. Such, also, is said by members of Oxford and Cambridge to be the case now at those universitics; and some of the most emInent preachers of the kingdom, such as the Bishop of Oxford (Wibberforce), have bcen meationed in confirmation of this remark. It is for such reasons that the words in question are here marked with a shortenerl or brief sound of the ltalian $a_{1}$ in accordaace with the views and practice of Dr. Webster.
§ 7. Sound of broad $a$, marked A, n, as in a!ll, talk, haul, sucarm; heard slso in sauce, auce, geôrgic, fork, groăt, bôught, \&c.

Note. - This has sometimes been called the German $a$, but is a broader and more guttural souod, being formed hy a depression of the larynx, and a consequent retraction of the tougue, which enlarges the cavity of the mouth posqueriorly.
§8. Short sound of hroad $a$, marked A, a, as in what, wag der, wallow, \&c.; heard slso in linowledge.
Note. - This is the extreme short sound of broad $a$, and coincides with the sound of o in not. It ditters, however, in quality as well as quantity from broad sound of o in not. It ditrers, however, in quality as well as quantity from broad
$a_{1}$ being a more open sound; that is to say, the aperture of, the lips and the interA, being a more open sound; that is to say, the aperture of, the lips and the inter-
nal eavity of the mouth, though of the same shape in both cases, are somewhat nal cavity of the mouth, though of the amme saape in both cases, are somewhat larger for the former ( $Q$ ) than for the latter ( $(Q)$, while the position of the tongue remains unaltered throughout. Nor is this diflerence peculiar to $n$ and a: it also exists between the other pairs of vowel sounds that have essentially the same organic formatioo, but differ in lengeth or duration: in each case, that which is the briefer in quantity is the more open in quality of the two.
There is a sound of $a$, as heard in salt, although, \&c., which is intermediate between that in cuve and that in what. No distinetive mark is used to indicate this iotermediate sound, but the inquirer is referred to this section from all words in the vocabulary in which the sound occurs. - See § 21 , Note.
§ 9. An exceptional sound of $a$ occurs in the words any, many. It is $\varepsilon s$ if they were spelled $\bar{e} n^{\prime} y, m e n^{\prime} y$, being the regular short sonnd of $c_{\text {a }}$

## E.

§10. Regular long sound, marked $\overline{\mathbf{E}}, \mathbf{Z}$, as in ēre, méte, \&c. ; heard also in Casar, béart, feel, lēisure, pēople, kèy, machïne, fiēle, asophayus, quay, \&c.
Note. - In the formation of this element, the tongue is raised convexly within the dome of the palate, pressing against its sides, and leaving only the smallest possible passage through which a vowel sound can be uttered. E is therefore the closest lingual or palatal vowel, and is one of the extremes of the natural vowel scale, it and oo beiog the other extremes.
§11. Regular short sound, marked $\overline{\mathbf{E}}, \check{\mathbf{e}}$, as in ënd, mĕt ; heard also in many, apharesis, said, says, fĕather, hẽifer, lĕopard, friĕnd, asafotida, bury, guĕss.
Note. - This is not a short sound of the long e. It has usually been considered ns the shat or exireme short sound of the a in fute; but most orthoëpists at the present day, while allowing it to be a nearly related sound, regard it as the present day, whinet, being slighly more open than the radieal part of $\bar{a}$, and lacking the canish : both are iatermediate between $\dot{u}$ and $\bar{e}$, the tongue not being so much depressed as for the former, oor raised so high toward the palate as for the latter. - Sec § 2 , and § 3 , NOTE.

Occasional Sounds of E.
§12. Sound of e like \& (as iu care, fuir, bear, \&c.), marked $\mathbf{e}, \hat{\mathbf{e}}$, as in êre, thêre, hêir, ê'er, se This, ss is stated in §4, is the same sound with that of $a$ an care, - See §\&.
8 13. Sound of e like ā, marked $\mathbf{E}, \mathbf{e}$, as in eh, eight, prey, rein, \&c. - See § 2. Nute. - This is essentinlly the sound which this letter geacrally has in the eadiog modern lsaguages of Contiaental Europe.
§ 14. Sonad of $e$ before $r$, verging toward the sound of $u$ in urge, marked I., $\mathfrak{~}$, as in ērnine, teerge, prefer ; heard also in ēarnest, mirth, myrtlc, sc.

Note. - The ease here contemplated is that of $e$ hefore $r$, in a monosyllable or in an aceented syllable in which the $r$ is not followed by a yowel or by another $r$, or in deriratives of such words, when the syllable retains its accent, as In hert, defer, deferring, err, erring, term, mercy, muternal. When e occurs before $r$ followed hy a vowel or by another $r$, in a word not derived as above, it either has the short sound, as in ferry peril, perilous, keritage, ferule, or the long sound, as io periorl, hero, material.
The vulgar universally, and many cultivated speakers both in England and America, give the $e$ in such words the full sound of $u$ in arge, as, murey for mërcy, turm for têrm, se. But, in the most approved style of pronunciation, the organs are placed in a position intermediate between that requisite for sounding $\hat{A}$ and that for sounding $\check{e}$, thus making (as Smart observes) "a compromise between the two." In otler words, this element is radically distinct promise between the two." In other words, this element is radically distinct
from binth and $e$, being less guttural than the former and less palatal than the later, from which it was doubtess originally evolved.

It is a vulgarism among old people in New England, and also the error of some fashionable speakers, to ehange the $\bar{e}$ into $\hat{e}$, or into a prolonged sound of a: as, êth or äarth for êarth, term or tuarm for têrm. This can not be too carefully avoided.

## I.

§ 15. Regular Iong sound, marked $\overline{\mathbf{i}}, \overline{\mathbf{x}}$, as in īce ; hesru uso in aishe, height,
 monosyllables ending with ul, as lind, find, lind, \&c., except utud, meaning air in notion, and $w$ rnd, to scent, to cause to lose or to recover wiud or breath.
Note. - This sound, though represented by a single eharacter, is not a simple element, but a diphthong. It is composed of $\ddot{a}$ and $\bar{c}$ as extremes, with the it accented, but made so wry brief that the war with dilliculty recognizes the precise character of the sound.
§10. Kecrular short sound, marked İ, I, as in rll; heard also in Engtish, beazw fin, been, ševe, women, busy, guthea, nymph, \&c.
Note. - This is not a short sound of long i. Many have considered it as the shat or extreme short sound of ionge; but it is really a distinct, though closely allicd, clument, and is so regarded by the best orthoëpists at the present tione. In its formation, the tongue is slightly relaxed frum the position assumed for producing $\bar{e}$ : this is the only difference between the two souads. - See $\S 3$, NOTE, and § 8 , NOTE.

## Occasional Sounds of 1.

§ 17. Sound of ilike that of $\log \mathrm{g} e$, marked $\mathbf{i}, \mathbf{i}$, as in plque, machine, caprice, \&c.-Sce § 10 .
Note. - This is appropriately the sound of $i$ in all foreign languages. Nost of the English words iu which this souud is represented by this letter are from the French.
§ 18. Souud of $i$ before $r$, verging toward $u$ in urge, marked $\hat{\mathbf{i}}, \mathbf{i}$, as in irksome, virgin, thirsty, \&c., jdentjeal with that of ein ermine.

Note.- $I$, in this case, is sounded by many spenkers like $u$ In urge, as vurgin for rirgin. 'l"he obscrvations made under sit as to short $e$ in words Jike ermine, verdure, \&c., apply fully to this sound of the $i$.
O.
$\S 10$. Fergular long sound, marked $\overline{\mathbf{\omega}}, \overline{\mathbf{o}}$, as in $\overline{\text { bld }}$; heard also in hautboy, ८eतu, ycōmun, sev, rø̄am, hōe, tø̄or, shōulder, grōto, ōwe, \&c.
Note. - This sound of o is in most cases diphthongal, having a slight "ranish" in oo annexed to the "radical" or initial sound, as in belou, where the $w$ may be regarded as representing the vanish. The radieal part of the sound is a simple element, intermediate, with respect to the mode of its formatiou, between !n and $\overline{0}$, the tongue being less depressed than for $n$, and the labial aperture gr"cater than for $\bar{o}$. It is essentially the same clement as that described in the next section, but of a slightly less open quality. The vanish of the $o$ is omitted in unaccented syllables, as in o-pia'ion, to-bac'co, sc., but ought not to be omitted elserchere. This remark is important as bearing oo a very prevalent error, which will be mentioned io the oext section.
§ 20. It is exceediugly common, in some parts of the United States, to shorten the loug o of certaia words, as bolt, most, onty, \&c., by dropping the vanishiag element which belongs to the vowel, and giving to the radical portion a somewhat more open quality; but this practice is wholly opposed to Euglish usage. The provincialism here pointed out obtains, more or less widely, in respect to the following words, viz. : boat, bolster, bolt, bone, both, broke, broken, choke, cloak, close, А., coach, coat, coax, colt, colter, comb, dolt, folls, goad, hold, holm, holster, home, homely, hope, jolt, load, molten. most, molt, none, only, open, pole, polka, poultice, poultry, reroll, road, rode, rogue, soup, sloth, smoke, sofn, sol (the uame of the wote G of the musical scale), spoke, $\mathbf{v}$., spoken, stone, stom, swollen (or swoln), throat, toad, upholsterer, upholstery, thole, wholly, wholesome, urote, yoke, yolk, and possibly a few others. Most personsin New Englaud sound the o in a part or all of these words without the vanish, while some go firtler, aud give to a umber of them almost the souud of short $u$, as, kums for home, \&c. On this subject, Smart speaks strongly iu the commuuication referred to above. He insists that all such words should liave the full sound of the $o$ as heard in accented syllables, though not in all cases with quite the same prolongation of the sound. Thus the fullo of dome should be given to home; of slope to hope; of poach to coach; of moat to coat; of joke to spoke, cloak, smoke, and broki ; of hone to bone and stone; and similarly io the other cases. He adds, "I indicate kole and whole as identical in sound. As to holy and $x$ holly, 1 prolong the vowel and middle consonant more iu the first thnn in the second." 'This, in his view, is the ouly difference betweeu them. Still, the theoretic phonologist can not but regard the true short o described in this section as an important and legitimate member of the family of vowel ounds, sod must look upon its absence in the established orthoëny of our lauguage as a defect aod an anomaly. To him, therefore, its rise and growth in the popular speech are interesting facts, and its final prevalence and admittance to equal rights with the other vowels is a thing he would rather desire than deprecate.
 der, Knǒrcledge, \&c.-Sec § 3, Note, and § 9.

Note. - This is the shut or extreme short sound of broad $a$, and coincides with the sound of $a$ in what. There is a medium sound of this letter which is neither so short as in not, nor so long as in mought. Smart says that this medium sound is usually given to the short o when directly followed by $s s, s t$, and $t h$, as in cross, cost, broth : also in gone, cough, trough, off, and some other words. To give the extreme short sound to such words is aticetation: to gire them the full sound of broad $a$ is vulgar.

## Occastonal socnds of 0 .

§22. Sound of o like short $u$, marked $\dot{\mathbf{b}}, \dot{\mathbf{s}}$, as in other, clote, de. ; heard also in di̇es, gŭn, flòorl, döuble, \&c.-See §31.

Note. - The words combot and comrade are marked with this sound by many orthoeipists, but there is equal or greater authority for the regular sound, cimbat and comrade. The o in sonereign had originally this sound, but (as is stated by Fmart) has in England, for the last twenty years, been gradually passing into the short o (soyvereign), until this is now the prevailiog sound.
 - Sce § 26 .
§24. Sound of o like oo short, marked $Q, \%$, as io bqsom, uølf, woman, \&c. -See §8, Note, and § 27 .
NOTE. - This sound coincides with that of $u$ in $b u l l$, which is also used for or short. - See $\S 33$.
§25. Sound of olike a (broad $a$ ), marked $\hat{\mathbf{\omega}}$, ô, as in ôrder, form, slorrk, \&c.See $\S 7$.
Note. - The letter $o$ has this sound when it occurs before $r$ in a monosyllable (as in for, form, lord, north) or in an accented syllable when mot followed hy a vowel or by another $r$, as in for mer, ô $r^{\prime} c h a r d$, , abhôr', and also in the derivatives of such words, as in formed, northern, abhor'ring. But when o occurs, is an accented syllable, before $r$ followed by a vowel or by another $r$ in a word not a derivative, it has its regular short sound, as in for'eign, br'ange, tor'rid. These two sounds of $o$, viz., the broad, like that of a in call, and the short, like that of is in what, hnve been confounded by some orthoipists; but there is an obvious difference between them, not only in quantity, but also in quality, the short vowel being more opea than the broad. - See $\S 8$, Note.

## 00.

§26. Regular long or open sound, marked $\overline{00}, \overline{\mathbf{0}}$, as in mōn, food; heard also in rhe!!m, drew, to, canoe, manceuvre, growp, rude, r!!e, recruit, \&c.
Note. - This sound is the same element with the of the Germans, Spaniards, nud Italians, and coinctdes with the French ou in route. It is the closest latial vowel; that is to say, in forming it, the lips are more nearly closed than for any other vowel, the sides being brought into contact with each other so as to leave only a small central aperture for the escape of the voiec.
§27. Regular short sound of oo, marked ©ॅo, oัo, as in wool, fool; heard תlso in थc@lf, sheuld, lu!ll, \&c. - Sce § S, Note.
Nore. - Walker and a few other ortboëpists mark the words book, brook, conk, hnok, and others ending in -ook, to be pronounced with the long sound of the OO, ssill food; but the best nuthorities at the present day, and the hest not almost universal usage, are decidedly ia favor of the regular short sound of the vowel.
§28. The following words, room, root, roof, rood, lroom, and soon, hnse properly the long sound of oo, as in food (see § 20 ); but many prowounce them with the short sound, as in fout (see § 2J). New Euglaudera especially are often recognized abroad by their habit of pronouncing rōom, röom; rōot, rŭt; rōif, rưuf; rōod, rơod; brōom, brơom, and sōon, sơon. Smart jroperly inaists that the quality of the sound in soon should be the same as in moon, though the vowel is hardly so much prolonged in quantity, excent in dignitied utterance.

## U.

§29. Regular long sound, marked $\overline{\mathbf{V}}, \overline{\mathbf{1}}$, घs in müte, finit, \&e.; henrd sleo in

Note.- This is a compound sound, formed of the vowel on, with a alight sound of the consonant $y$ or of the vowel ē or $\bar{z}$ before it. When the $u$ beginan syllable, or is preceded by any one of the palatal or labial sounds $k, f, p, b j$, $r, m$, the sound of $y$ is clearly perceived, as in the words usage, cubc, gules, juny, hurin, futile, mule.
$\S 30$. When the long $u$ is preceded, in the same syllable, by any one of the consonants $t, t, l, n, s$, and th, it is peeuliarly difficult to introduce the sound of $y$; mull heace negligent speakers omit it entirely, pronouncing duty, doots"; tane, taon; lute, loot; nuisance, noosance; suit, soot; thurible, thoorible, de. The reasou is, that in forming these consonnats the orgme are in a position to phas with perfect ease to the sound of oo, while it is very difficult in cluing so to tunch the intermedinte $y$; hence the $y$ in euch cases in very apt to be dropusd. On thas point Smart remarkh, "To say tube (tyoob), lucid (lyoocil), with the u as perfect [i. $e$, whth a distinct soood of $y$ prelixed to oo] as in cube, cubic, mute, dic., is either northern or laboriously pedantir," - a deseription which npplies to the vulgar in our Linstern States, nad to those who nee over-nice nt the south. The jractice of good society is to let the $y$ sink joto a very brief somme of long e or of short $i$, both of which have a very close organic relationship, to eonsomant $y$. Special enre must be taken not only to make this souud na hriff ns postible, but to pronounce it in the same syllable with the oo. We thus avoid the two extremes, of averdoing, on the one hand, by making too much of the $y$, and, un the other hand, of sounding only the oo ufter the manner of carcliss speakers.
It ought to be ndded that wherever the sound of $s$ or of ah precerles the $\eta$, the $y$ is onitted, the in sure, sounded shoor; sugar, Bhoัogar, azure, thenor, sc.
 btöol, tòuch, \&c.

Nutf. - This is not the short sound of long $"$. It Is a Matluce nud simple element, and derives ita pecultar guttural character from the bafluence of the pharynx and back part of the mouth. In ito organic formathen, it Is conentinly the same sound an u in urge, but is shorter in quantity, and of a rather moru open quality. - See § 3 , Nore, nod § 8 , Nore.

Occasional Sounds of U.
§ 32. Sound of $u$ when preceled hy $r$ in the anme byllnble, marked I., un, no in - wle, rumor, r!!ral, ice.

Note. - All the English orthoipista agree that the $u$ in this case drons the $y$ or Y which is senerally an clement of its compound sound when preceded. in the same syllable, by any other consonamt than $r$, and becomes simply $\overline{0}$, so that rue is pronounced röo ; rule, röol ; rubl, rooby, \&e. On this subject, Dr. Wehster's views have been greatly misunderstood. Maoy suppose that he wished to insert a distinct sound of $y$ In fuch cases, pronouncing rute, ryool, and ryby, ryooby, \&c. Jothing conld be further from his views or practice. No one had a greater disgust for wuch a prolongation of the sound. The whole question here turns on the analysis of our long 4 . Dr. Webster did not regard it as diphthongal, except at the commencement of a syllable, as in umite. In all other eases he looked upon our long $u$ as a distinct and peculiar rowel, nearly sesembling e end $\overline{0}$, but 80 much eloser as to be properly considered an elementary sound : and he therefore marked it (as he ought to do on that supposition) in sound; and he therefore marked it (as he ought to do on that supposition) in
one and the same manner in inl such cases. This has given rise to the supposition that he favored the insertion of $y$ in sach words as rule, \&c. The fact is, on the contrary, that, according to his scheme, there is no $y$ in the case to bo inserted.
In this volume, the ordinnry view has been ndopted; viz., that the $\%$ is, in most cases, dipluthongal, as deseribed in § 30 , but that, when preceded by $r$, it is most cases, diplahongal, as described in $\S 30$, but that, when preceded by $r$, it is
equivalent to mercly. This has been done in conformity to the genernl understanding of orthoipists, without undertaking to decide the abstract question whether $\psi$ following $r$ in the same syllable is diphthongal or not. Some may think, in sobstantial agrement with the riews of Dr. Webster, that in graceful pro nuaciation there is a very slight softening sound like that of $\bar{e}$ or $\bar{t}$ between the $r$ and the vowel in euch words as rue, rule, rude, \&e. (Compare § 30.) Others may consider this as a mere provincialim; but the great body of speakers do undonbtedly pronounce this class of words with no other rowel sound thao $\overline{00}$, as marked by' Smart and other English orthoiepists.
§33. Sound of $t$ like that of short 00 (ö), marked 5 , t, as in bull, put, push mull, \&c.-See §§, Note, and § 27 .
§34. Sound of $u$ before $r$ in such words ns urge, burn, furl, concur, \&e., marked $\widehat{\mathbf{0}}, \mathbf{a}$; heard also iv toorm, joumey, \&c.
Note. - This is often called the natural rovel, becnuec it requires almost no effort to atter it, the mouth being slighty opened in the casjest or most natural and unconstrained manner for the passaje of voice in a nearly unmoditied form. But the name is scarcely appropriate; for the sound is nltogether wanting in many languages, and - with the single exception of the English-it occupies a comparatively subordinate place in the vowel asprems of the principnl dongues in which it occurs. It has heen more aptly terned the neutral vowel, with refer ence to its want of any strongly marked distinctive character; and this name is liere adopted as, on the whole, preferable to any other. The sound differs from that of short $u$ (with which it has often bern identified) in length, and in a somewhat greater degree of closeness. (Sce § 8, Note.) It ocenrs, in monoryllables, before $r$ not followed by a vowel (hs in cur, fur, furl, hurt, burst, purr) : in accented syllables, before $r$ final or $r$ followed by one or more consonaute differe from itselt' (as in recur ${ }^{1}$, cur feu, furlong, dishurseld); and in derivatives from any such words (as currish, furry, purriug, recurring). Except in the casces here specifed, the letter $u$ before $r$ has its short sound, as in cür'ry, hŭ $r^{\prime} r y$

## Y.

§35. Regular loug sound, marked $\overline{\mathbf{Y}}, \bar{y}$, as in fīy, stūle, sk $\bar{y}$, edif $\bar{y}, ~ \& c$.
Note.- Thie is the sane sound as long $i$. - See § 15 .
The word my, when used without emphasis, takes its regular short eound in England, and to rome cxtent in this coustry, as, " 1 took down my hat." This sound, howewer, should not be given in serious or solemn discourse, nor shouli the $y$ ever be turned into lone ci after the lrish fashion, "I took down mee hat." According to Wralker, Smart, Worechter, nud Cooley, the word by is, in like manuer, colloquially pronounced by, when not emphatie; but this pronuacintion is very'rarely heard in the United Etites.
§36. Regular sbort sound, marked $\mathbf{Y}$, n. in cy̆st, ny̆mph, ly̆ric, aby̆ss, coiseiding with the sound of short $i$. - See $\S 16$.

## Occasional Sound of Y.

§37. Y has ouly one oceasional somad; viz., in ench worde as myrrh, myrfle, in which it has, like the $e$ nad $i$ in similar circumstanees (see § 1t and § 1s), very nearly the sound of $u$ in urge. This is Indicated in the Dictionary by reepeld iug, the words in which $y$ han this sound being very few in number.

## 1I. IEEGULAI OR I'HOIEN DIPITTIONGS.

## OI or OY.

§38. The sonnd of oi or oy (ummarked), as heard ln oil, join, oyster, de.
Noti:, - The elementen of this diphthong nee ons in cord (the anme as broad at), man i ins in fin (short i), with the necent on the former. Op la always regular In English worls, and of 18 regular also, "xecpt in the following cises; viz., avolrduppis (ns'-ur dn polz'), connolssear ( $k$ on is Roor' $^{\prime}$ ), shannols (sham'my)

 like loak $i$, as jine for jnin, rile for roil, sc.; but the pronuelato io now coutined excluntwely to the lowert elansen.

## OW.

§39. The found of ore (unmarked), ns heard In orel, vorel, flotect, de.
Notsi- This elfplthong is componmet of the elensent it mod wh, the forme of whild is accented, but made "xtrembly brlef. Ja a conshlerable mamber of words, one representa the nound of long o: in the nlugle word linortcilyer mint In ite derivatyen, it has the nound of nhort o. Theme are accordhagly dielh

## OU.

§40. This riphithong has two lending counde.
(1.) 'flut of nee in wards derlwed from the Anglo Saxon, he in out, hound, do (2.) That of $\overline{o b}$ in wurds derlvel from the lremeh, as in soup, group, se.

Noti:- Tho werd roule, heling directly from the French, Is perliaps more commonly pronobincel ly eareful apenkera with the French nound (sēti), while
rout has the Anglo-Saxon sonad of ow. The trord wound, which, from ita AnglaGaxon origin, ought to have the sound of ore, has, to a great extent, taken the French sound (uroond), notwithstanding the remonstrances of Walker and other orthoëpists against the irregularity.
§41. The diphthong ou has also, in a number of words, the sound of long $o$, as in $s$ oul; in a few cases, the sound of the broad $a$, as in bought (bant); sometimes that of short $u$, as in coŭple; sometimes that of $\hat{a}$ in urge, as iu sdjorm (adjnrn); and, in the three words could, roould, should, that of or as in foot. These peculiarities are indicated in this Dictionary by the appropriate mark over the significant or sounded vowel, or by respelling.

## 11I. VOWELS IS [N゙ACCENTED SYLLABLES.

§42. When an anaccented syllable ends in a consonant, its vowel, if single, uas, in strict theory, its regular short or shut sound, though nttered somewhat more faintly, or with a less proportionate furce, than in an accented syllable, as in äs-sign', con'düct, con'fĭct, se. Iu many words of this class, however, the rowel is apt to suffer a change or corruption of its distinctive quality, passligg over into some sound of eusier utterance. Thus the vowel sounds in the naccented syllables ar, er, ir, or, yr (as in altar, offer. tupir, mirror, zephyr), sre coincident with that of the second $u$ in sulphur. As a general role, $a$ and $o$, in anaccented syllables ending in a consonant, verge toward, or fall into, the sound of short $u$, particularly in colloquial discourse, as in bal'lad, bar'rack; rer'bal, bed'lam, cap'stan, jal'ap, bi'as, bal'last, hav'oc, meth'od, pis'tol, ven'om, compel', flag'on, bish'op, pi'lot, prov'ost. In such words, it wonld ordinarily be the raerest pedantry or affectation to give the vowel its regular short sound.

The wowel $e$, in unaccented syllables euding in a consonant, is, in some words, liable to be sounded like short $i$ (as in burrel), and, in others, like short $u$ (as in silent); but these charges are usually avoided by good speakers.

It may here be remarked, that some of the diphthongs are similarly affected by the absence of accent. Thus ai, which, iu an acceuted syllable, is usually
 ble, as in inountain, pronounced monn'tĕn or moun'tln. So ei, ey, and ie become changed in pronunciation into (as in surffelt, hon'ey̆, car'rted), and ou is sounded as $\breve{k}$ (as in griev'outs).
It is also to be observed, that, in the unaceented syllables of some words from the Latid, the vowel is long, though followed by a consonant in the same syllable, as in cantharidés ; but, in such eases, the long mark is, in the Dictionary, placed over the rowel.
§43. When the unaceented syliable does not end in a consount, tro cases srise; viz., -
(1.) The syllable may consist of, or may end in, a rouel, 8 s in the words e-bonad', di-rect', $e$-vent', mo-lest', \&c.
(2.) The syllable may end in a consonant, with final e mute at the close of words, as in nl'ti-mate, finite, rep'tile, \&e.
The former of these will, for the sake of brevjity, be called No. 1 , the latter No. 2. These will now be cousidered under each of the rowels.

## A.

§44. (No.1. Sce§43.) Here the a has properly a brief sound of the Italian $a$, as in $\mathrm{Cu}^{\prime} \mathrm{b} a, a$-muse', $A$-mer'i-ca; but, in familiar speceh, it is almost always so slighted aud obscured as to be indistinguishable from the neutral vowel, or $u$ in virge, murmur, \&c. In some words, like $\bar{\alpha}-e^{\prime}$ ri-al, ch $\bar{a}$-ot'ic, \&c., the $a$ has its regular long or name sound, somewhat shortened by the omission of the " vanish." This is due to the influence of the subseqnent vowel, which, in fluent utterabce, refuses to take the Italian $a$ before it without the intervention of one or more consonants. Sorue speakers in this country give the same brief sound of long $\boldsymbol{a}$ to this letter when it occurs in an initial unaccented syllable followed by a cousonant in an accented syllable, as in $a$-bonod', fa-tal'i-ty; but this practice is not sanctioned by the best orthoëpists. Formerly, a final had the same sound, especially in proper names, as, i-de $a, A^{\prime}$ s $a$, so'fa, Vir-gin'i- $a$, Scn'e-ca; but this easily slid into eॅ or $\ddot{y}$, and by careless speakers was omitted aftere and $i$, as, i -dee', $\mathrm{A}^{\prime}$ sy, so'fy, Vir-gin'y, \&e., - proumehations still beard among illiterate people. In the terminations $-a-n y$ and $-a-r y$, the a has usually the same sound as short e unaccented, as in mis'cel-la-ny, mo'ment-a-ry, dec.
\$45. (No. 2. See § 43.) Here the $a$ has sometimes its long sound, particnlarly in verbs ending in ate, as, ded'i-cāte, ed'u-cäte, \&c. In otbèr parts of spech, the sound of the $a$ is more obscure, verging toward short $e$, as in ul'timate, night'in-gale, pref'ace, \&c. In some instances it is apt to rerge toward short $i$, as iu vil'lage.

## E.

§46. (No. 1. Sce § 43.) Here the e has its long sound, slightly obscure or abridged, as in e-vent', e-mo'tion, so-ci'e-ty, $\mathbb{s c}$. Care shonld be taken not to sink the $e$ into an indefinite sound of short $u, a s$, soci'üty $^{\prime}$ for society, \&c.
§47. (No. 2. See § t3.) Here, also, the e has msually its long sound a little shortened and slighted, as in ob'so-lete. In a few instances, it rerges toward ohort $e$, as in college.
I.

There is great dirersits in the case of this letter. Hence it is difficult to lay down general r les; and Smart remarks, "The inquirer mnst be sent to the Dictionary to larn, in each particular case, the true pronunciation."
§48. (No. 1. See § 43.) $I$, when final in a syllable, has more commonly its short sound, as in phil-los'o-phy, di-rect', \&c. But the $i$ is usually loug in the aitial syllahles $i, b i$, chi, cli, cri, pri, tri, as in $\vec{i}$-de'a, bī-ol'o-gy, criz-te'ri-on, wi-me'val, \&e.
§49. (No. 2. See § 43.) In these terminations, usare is great!y divided. On the whole, the $i$ is more generally stort, as in ac-com'plyce, in'finte, fer'tyle, mar'i-tlme, ad-8-man'tzue, an'Tse, pos'i-tive, \&c.; but there are some impertant exceptions, as, cock'a-trîce, ex'île, gen'tüle, con'cu-bīne, ar'chīve, $\mathbb{\&} c$; also sul names of minerals ending in lite or ite; as, chrys'o-lìte, ste'a-tite, \&c. Ilere the Dictionary mast be consulted for the several words. According to Smart and Cull, chemical terms eading in ide (as bromide, chloride, de.) should be promonnced with the $i$ long ; but all other ortboëpists are nuanimous in making the vowel short; and the propriety of the latter mode of pronunciation is establislied by the fact that this whole class of words is not unfrequently spelt without the tiual e, thus, bromil, chlorid.

## O.

§ 50. (No. 1. Sce § 43.) IIcre the o has usually its long sound slightly abbro viated, aud without its " vanish " (see § 19), ss in o-pin'ion, croc'o-dile, to-bac'ca \&c. Care should liere be taken not to sink the $o$ into short $u$, as careless speakers often do, pronouncing o-pin'ion, up-pin'ion, \&c. Au exception, how. ever, is perlaps to be made in the case of the terminations -o-ny and -o-ry, in which, according to universsl nsage in England, the o is sounded like short u unaccented, as in mat'ri-mo-ny, prom'is-so-ry, \&cc. let most speakers in this country give the o in such words its long sound, slightly abbreviated, 日s in other unaceented syllables. The practice - too common among as - of laying a secondary aceent on the $o$ is a fault which should be sedulously avoided. - Sce § 110.
§51. (No. 2. Sce § 43.) The o in these terminations bas usually its reguls long sound, as its tel'e-scōpe, ep'öde, \&e. Sometimes it has the sonud of short $o$, as in di'a-lưgue: ia other cases, it rerges toward short $u$, as iu pur'pose.

## U.

§52. (No. 1. See § 43.) Here the $u$ generally has its long sonod slightly abridged, as in ac'cu-rate, e-mol' $u$-ment, man-u-mit', su' $\mathbf{n} u$-all, dep'u-tize, $u$-til' i-ty. But when the $u$ is preceded by $d, t$, or $s$, these combinations, $d u, t u$, and $s u$, are by the great majority of speakers chanced into joo, choo, and shoo or thoo, respectively, as in cd'u-cate (ěj'oo-kate), ha-bit'u-al (ha-blch'oo-al), sen'-
 In the notation of words of this class in the Dictionary, the regular pronunciation is generally given instead of the irrerular, in confornity with the riews of Dr. Webster; but, in many instances, refereace is made to the rewarks contained in the present section. When the $\%$ is preceded by $r$, it simply drops the $y$ sound, and is pronounced oo, as in er-u-di'tion (er-oo-dish'un). (Sec §32.) Care slould be taken never to sink the $u$ into the sound of short $y$ or $i$, as, edhycate for educate, or into any indefinite sound.
§53. (No. 2. Sce § 43.) The $u$ in these terminations should generally retain its regular long sound (see $\S \S 29,30$ ) slightly sbridged, as in grat'i-tūde, in'stitüte, rid'j-culle, trib'üte, im post'hüme, sub'ter-fuge, \&e. There are a few exceptions, as min'ute (min'it), $n$., and let'tuce (let'tis). If the letter $r$ precedes the $u$, the initial clement of the vowel is dropped, as in ce'ruse (sc'roas), per'uke (per $r^{\prime}$ ook), Sc. (See § 32.) On the other hand, wien the $u$ is immediately preceded by the letter $t$, it should never be changed into mere oo, as grat'i-tood for grat'i-tūde, iu'sti-toot for in'sti-tūte, - a practice which prevails among the vulgar.
The terminatious dure, fure, and sure, though sometimes pronounced with the regular sounds of the letters, are more commonly pronounced joor, choor, and shoor or zhoor, respectively, as io the words tem'per-a-türe (ten'per-a choor), ver'dure (rer'joor), cy'no-sure (si'no-shoor), ex-po'sure (eks-po'zhoar). (Sce $\$ \S 60,77,22,93,95$, and 107.$)$ When these terminations are immediately preceded by an accented syllable, many speakers change them still further futo chur, jur, and shur or ahur, as in na'ture (na'chur), ver'dure (ver'jur), cen'sure (sen'shur), ex-po'sure (eks-po'zhur). The Dictionary follows the practice of Dr. Webster in giving to dure and ture the regular sounds of $d_{1} t$, and $u$ (pronounciag verdure, verd'yoor, creature, krect'yoor, \&c.), while sure is respelt shoor or zhoor, as in the examples given abore. This, it is true, is an inconsistenus; but it is one of little mument, inasmuch as general nsage is so fluotuating: and ss reference is in nacst cases made to the present section.

There is a vicions promuachation of ture like tur, as na'tur for nature, which is heard, at the present dar, only among the most illiterate speakers, but which, as shown hy White (Shakespeare, vol. xi.., p. 4.3i) and others, was formerly in general use among the politest and best educated classes of society.

## Y.

§ 54. (No. 1. See § 43.) Hare $y$ has usually its short cound, as in hy̆-pocrri-sy, my̆-thol'o-gy̆, van'i-t̆y, mer'ri-l̆y, proph'e-ey̆, \&c.; but rerbs endiug in $f_{3} /$ have the $y$ long, as in jns't1 $\bar{y}$, mag'ni- $\overline{1} \bar{y}$, \&c.; also the three following verbs. oc'cu-py, mul'ti-ply, proph'e-sy.
§55. (No. 2. See §43.) The $y$ in these terminations (which are few in number) is generally long, as in na'o-dȳne, per'i-style, ne'o-Fh ${ }^{\prime}+t e$, pros'e-1jte, do

## 1v. SILENT COWELS.

§56. Vowels which are printed in Ttalies are not to be sonnded, as the e in nsed, burden, the $i$ in consin, se. Some of these cases require a more particulas consideration, and will now be mentioued.

Efinal.
§57. The letter $e$ is always mute when tinal, except in monosyllsbles con-
tamlag no other vowel, in elassical words, and in some worda from modern furcign lauguages ; but, in a monosyllable or ju an aceented 8 yllable of a word, though silent, it genernlly serves the parpose of iodieatiog that a proceding single vowel followed by a single consonant, a consonant digraph, or the conbined letters st or $u g$, has its regular long souvd, as in panc, hope, cube, inscribe, paste, change. When a silent e follows $c$ or $g$ at the end of a word, it merves also to show that the consonant is to have its soft, and not Its hard, sound, as in ace, nice, rige, huge, oblige. In a number of monosyllables (as
 derived from them (as forbade?, becone', forglee'), the e does not lave its usual effect of lengthening the sound of the preceding vowel. In unaccented syllit bles, it sometimes keeps the vowel in its long sound, as in gen'file, su'pine, $f^{\prime}$ nìte, ar'chive; but in a great many instances it exerelses no such influence, as in jus'tree, hos'tle, mar'i-thme, doc'trine, an'zsc, grantzte, plain'tyve.

## EN with E silent.

§58. Most words ending in en drop the $e$ in pronunciation, as, often (of $n$ ), hecten (heav'n), cven (ev'n), \&cc. Oue of the most prevalent errors of the present day, especially among our elergy (for the laity bave fallen into it much less), is that of pronouncing the words even (ev'n) evan, hearen (heav'n) heavun or heaven, offen (of'n) often, \&c. Walker remarks with great keenness on this error, declaring it to be a "puerile and false pronunciation." If the writer is correctly informed, it is never heard among good speakers in Enchand. The following are all or nearly all the words in which the e should be sounded: aspen, chicken, hyphen, kitchen, jerken, latten, lichen, marten, myvehen, paten, patten, platen, rowen, wicken, and yewen. The $e$ is also sounded when preecded by the liquids $l, m, n, r$, as in woolen, omen, linen, siren, \&c., though fallen, stolen, and swollen omit the $c$ in pronduciation. With regard to Eden, bornden, keathen, mitten, sudden, and sloven, there is a diversity of nsage amoug good speakers in this country, some suppressing, and some sounding, the $e$.

## ON with O silent.

§59. Many words ending in on preceded by $c, c k, s$, and $\ell$, omit the o in pranomeiation, as it reclion (reck'n), bacon (bak'n), treason (treas'n), matton (mutt'n), \&\&C.

## ED with E silent.

§ 60. The termination ed is usually shortened in pronunelation by dropping the sound of the $e$ (as in loved (lov'd), nimed (aim'd), diffused (diffus'd), \&e.), unless this letter is preceded by $\boldsymbol{l}$ or $t$ (as in amended, contcnted, \&e.), when its omission is organically impossible. But in adverbs formed by alding $l / f$, and in nouns formed by adding ness, to words ending in ed, the $c$ of this termination is uniformly sounded, as in assuredly, confusedly, renetecelly, amozed ness, composerfuess, \&c. There are also some participial adjectives, and some adjectives not derived from verbs, in which the e is commonly sounded, ns, aged, belored, blessed, crabbed, cragged, crooked, crutched, cursed, cusped, denced, dogget, hookel, jagget, learned, legged, naked, peakich, picked (sharp), ragged, rugged, stubbed, wiched, winged, wretched. The e is also drononnced in the derivntives formed from such adjectives, as, learnelly, blessedncss; but is generally omitted in the compounds, as, full-agel (-ajd), sheath-wingeal (-wingd). In pactry, the meter often requires us to prononace cel as a distinct syllable when it would not be so pronounced in prose. In all cases where it should properly be sounded, its oṇission is a mark of great vulgnrity.

Note. - In rending the Seriptures and I'rayer-book, some persons, chlefly nmong the clergy, taike it a practice to pronounce the participial termination -ed, in most casce in which it is not preceded by n vowel (as in betievell, reveraled), as a distinet syllable. Thus, "Whom he did predestinate, them he alsn call edi; and whom he call-ed, them he also justified ; and whom he justified, them he also glorifiet." This usage was formerly a very prevalent onc, but, at tho preselt fime, it is much more limited, and is commonly regarded as savoring of affectstion or of an old-sebool education.

## EL with Esilent.

§61. As a general rule, the $e$ is souvded in these terminations, as in gravel, level, vessel, chapel, \&e. To omit the e in such cases, pronounclig lerel jev'l, chapel chap'l, \&e., is generally regarded as a vulgurism. The following are nearly or quite all the words of thats kind io whilh the $e$ is properly omittel ; viz., barbel, betel, elattel, drazel, drivel, eascl, grovel, hazel, mangedwurzel, montel, mispickel, mussel, navel, ousel, ravel, rivel, scovel, mockel, shovel, shrivel, sulvel, swlugel, mwivel, teascl, toggel, tuwsel, weasel, and, according to a few orthoépists, model.

## CONSONANTS.

B.
\$62. The sound represented by this letter (whleh is unmarked) in heard in the words barn, rob, labor, talle, se.

[^2]exceptions; yet, in this country, the firat and the fourth of these wards are commonly pronounced without sounding the $b$. B is also silent in betellium.

## C.

§ 83. $C$ marked thus, $\subset$, $\varsigma$ (koft $c$ ), has the sound of $s$, as in cele, trace, ucidl, cypress, \&c.
Note. - It takes this sound whenever it accurs before $e$ (even If allent), $i$, or $y$ - See 8 , § 90 .
When the lettera re or ci are immediately preceded by an accented syllable, and are followed by a vowel in the next syllable, the c combines in pronuncia. tion with the $e$ or $i$ io form the sound sh, as in ocean, socith, sumontteones, sc. In some words, $c$ alone has this somd, or, rather, the e or $i$ is used twice, first coubining with the c to represent the mousd of sh, and then, in the game syllable, taking on its customary vowel sound, as in so-ci-alifify. - See SIf, § 95 .
§ 04 . $C$ marked thac, $\boldsymbol{C}, \boldsymbol{c}$ (hard $c$ ), lins the sound of $k$ when it comes before $\alpha, n, u, l$, or $r$, before $k, s$, or $t$ final, and when it ends a word or a kyllable, as in call, cot, cut, clot, crou'n, black, uct, zinc, trafic, pic'ture, ylae'cid, eth'ics. - See k, § 78.
§65. Chas the sound of $z$ in the words sacrifice, sice, suffice, and diseern, and in their derivatives. It is sileut in the words czar, rictuals, indict, and their derivatives, and also in the termination scle, as in muscle, corpuscle, \&c.

## CH.

§ 68. Ch unmarked (English ch) has very nearly the sound of tsh, as iu chili, muck, richer, speechless, \&c.

Note. - The compound sound signlfied by this digraph is not precisely equivalent to that represented by tsh. The ordinary sound of $t$ is uttered with the tip of the tongue pressed against the gum of the plpper front teeth. The first element of ch is uttered with the upper flat surface of the tongue, near the tip, applied to the gum at a point hightr up, juet wheren relaxation of the contact produces the configuration requisite for soundiag sh, the sceond conetituent of
 like a diphthong, or compound vowed, they have the effeet of only a single sound or beat opon the car.
When the letter $t$ comes before $u(=y o o)$ in nu unceented sylnnile, and is at the same time preceded by an accented syllable (ns in nuthere), or when it is preceded by $s$ or $x$ in an accented syllable, and is immedintely followed by ia ( $=$ ya) or in (=yo) in an unaccented ayluable (as in Christian, question, admixtion), both this letter and the $y$ virtually following it nre, by some speakers, preserved in their usual and nppropriate sounds; thas, noture (mant'yoor), rheisticu (krist'yanl), questione (kwést'yun), ulmixtion (nil-mikst yun), Sc. But by others they are suttered to sink into the casier and closely allied sound of ch in church; thus, nathre (na'choor), ('hristian, (kris'chan), question (kwěs'chun), almixfion (ad-miks chan), Se. In regard to the pronanciation of words ending in teons, when this termination is not under, but is immediately preceded by, the accent (ns in botn'leous), usige is far from beine aniform, some colling to teyus (as bornt'yus), athers relucing it to chus (ns boun'chus), while others cor-
 the in thoir customary sounds (as boun'te-us), fo the most common, except in the single word riuhteous, which in properly pronomed rit'yus, or ri'chus.
wingle word rimteots, when precederl $\mathrm{y} l$ or $n$, with the aound of simple $s h$, respelling filch, filsh, bench, brush, \&e. This in treated as no error br Smart and respeting fich, fish, bench, who give to ch its ordinary compound sonnd in all other leading ortho
worts of this claks.
 marchioness, machine, de. - See S11, §93.
Note. - Most words of this kind are derived from the French. According to the same nalogy, chivalry, which comes from that langunge, would be pro nounced shivalry, and not fehwury'; and it ls so marked by able orthoetpists.
§ 68. Ch markud thus, Ch, ch (iatiuch), has the found of $k$, as in chorus, epoch, distich, \&c. This is the usual soumd in worls derived from the anelent languages; but cherub and charity, with their derivatives, are exceptions. Ch is always hatd (like $k$ ) before $l$ and $r$, as in chlorine, chrism.
Nots. - The prefix arch, denoths chief, is pronounced ark in arehangel and lis derivatives, sad in words from foreign languages in which the other component part is not separately current in Englthl, an, architecture, archipelago, whelitrave, \&e. In all ofber coses, It is pronounced artch, as in archblabop, welk-enemy, arch-flend, \&c.
§ 69. Chi is sflent in the word drachm (thongh not in drachme, drak'ma), and alno in schism, yacht ( $y \mathrm{Ot}$ ), mad their derivatives.

## D.

§ 70. The sound of a (anmarked), пн in dele, Roul, rider, tradesman, \&c.
Notk. - The sound of this letter In formed by preasing the end of the tongno gealuat the upper ghme, find then foreme op voralized brenth, or rolec, into the month, the eoft palate belne rulsed to prevent lis encape through the nose
Thin ta the resular nud wanal soand of al; lat when this letter follown nohin pered or non-vocal connonant in the same egollable, It tuiformly takes the sound
 madhundkerchief.

## F

§71. The sound of f(immarked), as in fome, leaf, definitc, softly, \&c.
Note. - Thin letter, which is never allent, in uttered by npplying the lower if to tho upper frout teeth, nafl embtulug the breath. F has onfly ithla ane sound, excejt in the sligle word ofe ha wheh It ham the power of $r$. In the compounds hereof, thercof, und nithereof, many apeatiers prenerve the eustomary nud regular sount of the $f$; but good unge allowe it to he sounded as in the siasple worl.
G.
 go at lu gut, gate, gire, brgun, keg, sluggish, smuggle, \&e,

Note, - This snumd is produced by a compression of intonated breath, or voice, confined within the month by a contact of the root of the tuggue with the posterior part of the palate, which is at the same time raised sufficicntly to cover the back nostrils, or openings from the pharynx iuto the nose.
$G$ is hard before $a$ (except in the single word $g$ gol and its derivatives), $o, u$, $h, l$, and $r$, as in gute, gore, gum, ghustly, glad, grain. It is sometimes, though not usually, hard before e, $i$, and $y$, as in get, gire, gibbous, mugyly. This occurs chietly in words from the Anglo-saxon, and in a very few from the Greek. It is also, and always, hard at the end of words, and in the derivatives of such words, even when the $g$ is doubled and followed by e, $i$, or $y$, as in crag, $d r u g$, jug, cragqeed, druggist, Jougy.
When $i$ or $i$ is preceded in the eame syllable by the sound of $g$ or of $k$, very many speakers, particularly in England, interpose a slight sonnd of e, as in card, hind, garden, guart, firl, guite, guise, sky. Some persons affect the introducsayiug, kee-ard or $k-y a r d$, hee-ind or $k$-yind, ske- $\bar{y}$ or skoyz, \&c. The practice of saying, hee-ard or $k-y a r l$, , hee-ind or $k-y$, a very large portion, if not a majority, of the best speakers in the unted states, $\mathfrak{k}$ to that of the $\mathfrak{a}$ or $\bar{a}$, without sutfering any other sonud to slip in between them.
§73. G marked thus, $\dot{\mathbb{*}}, \underset{y}{2}$ ( $g$ soft), has the compound sound of $j$, as in $g \mathrm{~cm}$, rage, engine, caged, ic. - See § $\%$.
Note. - The letter $g$ generally takes this sound when it comes before $e, i$, or $\eta$; but there are some exceptions. (Sce the preceding section.) $G$ has also its $y$ goft sound before $a$ in the single word gaol (now commonly spelt juil), and in soft sound berore a in the siog
§74. In a few words from the Freach, gretains the sound of $z h$, which it has before $e$ and $i$ in that language, as in rouge (roozh), mirage (nix-räzh'), de.
$G$ is silent before $m$ and $n$ final, and also when initial before $n$, as in phlegm, sign, gnat.
For the office which $g$ performs in such words as longer, sironger, sc., see § $5 \%$.

## GHI.

§75. This digrapll (which is unmarked) is sounded, at the beginning of a word, like $g$ hard, as in ghastly, ghost, gheriin, isc. It is silcut after the vowel $i$, as iu high, sigh, weigh; and it is gencrally silent before $t$, as in bought, fraught, taught, itc. The words draught and laughter, where it has the sound of $f$, are exceptions. In other casce, $g h$ is generally prodounced like $f$, as in chough, cough, rough, tough, trough, enough, $\mathbb{d} \mathrm{c}_{0}$; but it sometimes has the sound of $k$, as in hough, lough, shough. In the word hiccough, it is usnally pronounced like $p$.
Formerly this digraph had the sound of $f$ much more frequently than it bas at the present dny. Daughter, for instance, was often pronounced and sometimes spelt dafter, the $a$ haviog the Italizn sound. On the other hand, rajter has been found with the spelling raughter. Smollett gives thof for though, in representing the specch of the vulgar; and the poets of the Elizabethan period frequently used such rhymes as nought and oft, toughi and alofi, de.

## H

§ 76. This letter (which is unmarked) is a mere aepiration, or breathing, and represents no fixed configuration of the yocal organs.
Note. - It is an emission of unvocalized breath through whaterer position of the mouth-organs is required by the succeeding element, the organs being al Fays placed to form the next following letter before the $h$ is pronounced. Thus, in he, the tongue is put in a position to sound tbe e before the $h$ is uttcred; and similarly in hall, home, \&c. $H$ differs, however, from a mere whispered vowel, in being an expiration of breath through the open glotis, whereas ia whispering a ronel the glotis is almost closed by the approximation of the vocal cbords.
In the following words, heir, heiress, herb, herbage, honest, honor, honorable, hour, with their derivatives, and also in hostler (more properls spelt ostler), his hour, with their derivatives, ond also in hostler (more properis spelt ostler), $h$ is
silent. It is also marked as silent hy most orthoïnists in hospital, huntor, and silent. It is also marked as silent hy most orthotpists in hospitat, humor, and humble, with their derivatives. There is, however, an increasing tendency to 800 nd the $h$ in these words. I is silent after $g$ intial, as in ghast, gherkin, \&c. a fter $r$, as in rhyme, myrrh, Sc.; and when preceded by a rowel in the eame syllable, as in ah, eh, oh, brhi, \&c. In many parts of England, the solnd of this letter is nlmost always om, where to be omittcd; as, onse for house, hupple for apple, se. This very grosa
vulgar error is rarely, if ever, beard among aatives of the United States.

## J.

§77. This letter (which is unmarked) has very uearly the qound of $d z h$, belug precisely the same as that of $g$ eoft, as in jar, jeer, joke, \&c. - Spe sis.
Note. - The sound of $j$, though almost identical with that of $d z h$, differs from it as the sound of $c h$ in chin differs from that of $t$ sh. (See § 66, Note.) $J$ is never silent. In the word hallelujal, it bas the sound of consonant $y$,

In words in which $d$ precedes a letter having regularly the sound of $y$, and occurring in an unacented syllable, as in modulate ( $\bmod ^{\prime} \mathrm{n}$-late) , soldier ( $\mathrm{Bold}^{\prime}$ yer), the sound of $j$ is very often substituted for the combined sounds of the $a$ and $y$ (thus, mojoo-late, sol'jer); just as the sound of ch is substituted for the combined sounds of $t$ and $y$ in nature, question, rightcous, Sc. (Bce § ufi, Note.) Smart remarks, "it is possible to preserve the pure sound of the $t$ and $d$ in nature and rercfure; yet nothing is more certain than that they are not preacrved pure by the best and mosi careful speakers."

## K.

§78. This letter (which is unmarked) has one uniform sound, as heard in reep, hing, kitchen, \&e., sud is preeisely equivalent to chard. - See § 64.
Note. - The sound represented by thie letter differs from that of $g$ tn go (hard g) only in being a whispered and not a vocal viterance; the oreans are pluced in the same position for forming both sounds. Before $n$, in the same syllable, $k$ is siledt, as in knock, knell, Fnit, know, \&c. It is also silent after $c$, nis in back, barruck, sc. In regard to the pronuaciation sometimer given to such roords as limd, shy, \&e., see §7, Note,
§79. The souud of $l$ (unmarked), as heard in left, bell, cholice, melting, \&c
Note. - This letter has only one sound, which consists of an effux of rocalized breath, or voice, over the sides of the congue, while its tip is pressed against the gums of the upper front teeth. $L$ is silent in many words, cepecially before a hoinl consonant, as in almond, malnsey, polmer, alms, culm, wculk, lulf, could, would, should, \&c.

## M.

§ 80. The sound of $m$ (unmarked), as heard in make, aim, clamor, armed, \&c.
Note. - Tbis letter has one nniform sound, prodeced by closing the lips, and letting the voice issue through the nose. It is silent when it precedes $n$ in the same syllable, as in mnemonics.

## N.

§ 81. The sound of $n$ (ummarked), as heard in nail, icn, panel, entry, \&c.
Note. - In the production of this sound, the tip of the tongue is pressed against the upper gums, as for $d$; but the voice, instead of being confined within the mouth, is sutiered to escape uninterraptedly through the nose, the nasal passages being uncovered fur that purpose.
When final after $l$ or $m$, $n$ is nniformly silent, as in lifn, condemn, solemm, hymn, limn, se.; but it is generally sounded in the derivatives formed from, summ, words by adding to them a termination beginnlng with a vowel, as in condemnatory, solemnizc, hymnic, limner. Sc. In the present participles of verbs demnatory, solemnize, hymnic, limner, Sc. In the present participles of verbe
ending in $m n$, as contemn, hymin, Sc., the $n$, though often unprozonnced, is more ending in min, as contemn, hymin, sc., the $n$, thous
properly soneded, as, contenniniy, hymning, \&c.

## § 82. The sound of $n$ as heard in linger, link, uncle, se. (marked $\mathbf{y}, \mathbf{n}$ ).

Note.-This is efsentially the same sound as that represented by ng ; but its length varies greatly according as it is followed by a whispered or a yoeal consonant. When it is followed in the same syllable by the sound of $k$, as in link, it is cut so short by the instantadeons and perfect closure of the organs which form this pure mute as to add almost nothing to the length of the syllable. It is therefure nudesirable to respell words ending in $u k$ by the vec of $n g$; and, in this volume, this is not done, a diacritical mark being placed below the $n$ instead, as a suflicient indication of the true quality and quantity of the found. But when this sound of $n$ is followed by that of $y$ in a separate syllahle, as in the primitive worls enger, finger, conger, hunger, it is long and sonoroue, and increases the duration of the syllabic utterance very perceptibly. As a general rule, the change of $n$ into $n$ takes place only before $g$ and $l$ (or before the equivalents of $k,-c, q$, and $x=h s$ ). It takes place before $k$ or its cquivalents when nny one of these letters follows $n$ in an aceented or unacecnted syljable, as in link, cinque, minx, betbink', adunque', phar'ynx; and before $y$ or $k$, or an cquivalent of $l$, when any one of these letters begins an unaccented syl' lable, and the $n$ ends a preceding accented one, as in con' cord, con'gress, un' lable, and the $n$ ends a preceding accented one, ar in con cord, con'grese, un'
cle, sc. Fentynion and a few othcr words are exceptions; also words beginning cle, sc. Fcuymid nid a few other words are exceptions; also words beginning With the prefixes in, nom, quinque, nad un; ns, income, non' conform ity, quin' quevented eyllable, and the $g$ or $l$ begins an accented one, the $n$ invariably retains accented eylhable, and the $y$ or begins an accented ons, th
its regular sound; as in con-cord'ant, con gres'sional, \&c.
it is also to be observed that in most derivative words, like hanger, singer, wronger (from hang, sing, and urong), the $g$ is not sounded, hat anites with the $n$ to represent the sonnd $w$ hich in ibe primitivesjust cited is represented by $n$ alonc. But in the comparative and superlative degrees of the three following words, viz., long, strong, and young, znd also in the words cliphthonghal and triph. thongtt (from diphthong and triphthong), the $g$ is always, though wery irregu-
 It is further to be obyerved that there is a smail elass of words in which the $n$ has its ordinary sound, as in muil, and the $g$ its soft sound, as in $g \mathrm{~cm}$. Of tbis class, the words denger, stranger, ginger, and plunger are examples.

## § 83. The sound of $n g$ (namarked), as in sing, singer, singly, dec.

Note. - This is n simple, elementary sound, and is not (as might be snpposed) a componud solund made up of the sound of $n$ in conjunction with that of $g$. In forming $r \%$, the tongue is placed in the same position as for forming $g$; the nostrils, bowever, are not completely closed, but yet so moch so as to prodnce a marked resonance (somewhat similar to the eound of $n$ ), whicb may be continued to any length, as in siag, bring, Sic. - See § 82.

## P.

## § 84. The sound of $p$ (unmarked), as hcard In pay, ape, paper, aptly, \&c.

Note. - The position of the organs decessary for forming this sound is the same as for $b$, but the sound itself differs from that of $b$ in being an viterance of the breath instead of the roice.
$P$ has but one sound; it is silent when initial before $n, s$, and $t$, as in phenmaties, psalm, pshave, pfarmigan. It is also silent or very indistinet when it occnrs between $m$ and $t$ in the same syllable, as in tcmpt, exempt, \&c.; but when preceded by $m$ in the same syllable and followed by $t$ or by $\&$ in the eext syllable, it is more properls sounded; as in temp-ta'tion, exemp'tion, redenp'tion, consump'tive, sump'tious, bump'kin, pump kizn, \&c., thongh, in colloqnial utterance, it is very often suppressed in words of this class. It is also mute in the following words, and in their derivatives; viz., raspberry, receipt, sempstress, accompt, and corps,

## PH.

§85. This digraph (which is unmarked) occurs chiefly in words of Grects derivation, and has usually the sound of $f$, as in phantom, sylph, philosoph?s \&c. In Stephen it has the sound of $r$; and, according to most orthoeipists, it has the same sound in neplew (nev'ew), thought in this country it has commonly its regular sound of $f$ in that word.
Before th initial, $p h$ is silent, as in $p h$ thisis; it is also silent in apophthegm. In diphthong, triphthong, ophthalney, naphtha, and other allied words, together with their derivatives, the $p h$ is often sounded as $p$, or the $h$ may be regarded as silent.
Q.
§ 80. $Q$ is followed in all cnses by $u$, and these two lettera, takgn together, have usually the sound of $h w$, as in queen (kween), conquest 《konk'west). (dc.

In a few words derived from the French，$q u$ is sounded like $k$ ，as in coquette， quculrille，\＆c．It lats the same sound in the common termination que，ss in antique，oblique，burlesque，sc．

## R．

§ 87．This letter（whieh is unmarked）may be viewed under three aspects ：－
（1．）$n$ as in rip，trip，carol，\＆c．（sometimes called rough，trilled，elental，or initial $r$ ）．
In forming this sonnd，the tongue assumes nearly the same position as for $d$ ； but the roice，instead of being confined within the mouth，is suffered to flow freely over the tip of the tongue，producing a very alightly trilled and peculiarly liquid sound，closely resembling that of $z$ in the mode of its formation，but not partaking of its harsh，buzzing quality；the difference between the two sounds， in this respect，resulting from the faet that the tip of the tongue is approxi－ mated more elosely to the upper gum for $z$ than for $r, \quad R$ is sometimes strongly trilled or rolled by a forelble expulsion of the voice；but in eustomary speech， it is very gently pronounced，and any marked vibration of the tongue should be carefully avoided as a pedantic affectation．The sound here described is heard in English in the two following eases：1．When $r$ is not preceded by a vowel，ss in ream，dream，prompt，spring； 2 ．When it stands between tivo vow－ els of which the first is short，as in baron，meril，spirit，florid．Oftes the $r$ is doubled in the written word，as io barren，merry，forvil；but，in these cases， ouly one $r$ is heard in the pronuaciation，provided the preceding vowel is short， －See § 109.
（2．）$n$ as in far，form，terse，surge，\＆c．（sometimes called smooth，palatal， guttural，obscure，or final $r$ ）．
By most orthoïpists at the present day，the letter $r$ ，when it oceurs before any consonant，or when final，is regarded as a distiact element from the last， and as formed by in slight vibration of the back part，or root，of the tongue against the extremity of the soft palate．Many writers，however，do not ad－ mit any such distinction in the sound of $r$ ，maintaining that the value of the letter（apart from the obscure vowel element described in No．3）is uniform in all situations．
（3．）$R$ ，connected with a guttural vowel sound，as beard in kuch words as fare，merc，ire，ore，cure，poor，our，\＆c．Were the character $r$ represents two sovads；viz．，an ohscure vowel sound resembling that of $u$ in urge，and $n$ smooth or palatal $r$ ，so that the above words are pronounced faur（see § 4）， mèur，iur，\＆c．
§88．Io the pronuciation of accurate speakers，$r$ is never sileut；hut when it oceurs nfter a long rowel or a diphthong in the same syllable，as in here，fotr， murmur，our，mire，\＆c．，it is commonly and entirely suppressed，both in the United States nod the south of England．In the northern counties of England， and in Scotland and Ireland，with equal impropriety，it is，when so situated， always strongly trilled．
§89．In English usage，when the letter $r$ is preceded in an acceated syllable by a long vowel or a diphthong，and is followed by a vowel in the next sylla－ ble，it uniformly represents both the palatal，or smooth，and the dental，or trilled，sound of this letter，ns in hero，iris，glory，lurid，pronounced her＇ro，ir＇－ ris，glor＇ry，lur＇rid．In the United States，this double power of the letter $r$ is chiefly，though not iuvariahly，restricted to the derivotives of words ending in $r$ or re preceded by a long vowel or a diphthong，as in poorer（poor＇rer）， from poor ；boring（bōr＇ring），from bore ；airy（âr＇ry），from air；peeroge（peer＇－ rage），from peer ；wiry（wir＇ry），from wire ；securing（secur＇rlng），from secure； but，on the other had，we say he＇ro，$i^{\prime} r i s, g l l^{\prime} r y, l u^{\prime} r i h$, dce，because these words nere not derived from any other words in the langunge．In Scotland， however，the universal practice is to join the $r$ in all cases to the following vowel；or，io other words，to give it only its deatal or trilled sound；thus， pee＇rage and he＇ro，wi＇ry nnd $\bar{i}^{\prime} r i s, b \bar{o}^{\prime} r i n g$ and glō＇ry，sec $\bar{u}^{\prime} r i n g$ and lü＇rid，sc．

It is to be obscrved that those orthoëpists who manain that $r$ has one invo－ riable sound，nseert that the only peculiarity in the English pronunciation of such words ns hero，iris，\＆e．，and in the English and Americal promuncintion of such words as poorer，boring，\＆e．，consists in the interposition between the $r$ nad the preceding vo wel of an obscure vowel sound like that of $u$ in urge，which obscure sound is omitted by the Scotch．

## S．

§90．S unmarked bas its regnlar sharp or hissing sound，ns in same，yes， massy，resting，\＆c．

Notf．－This round la an utteranee of nnvoenl hreath forcerl between the tip of the tongue and the upper gum，the tongue being placed in the proper post－ tion for soundine $t$ and $d$ ．S alwaya has this anond at the beglnaing，mat fre－ quently in the mbldile nud at the end，of words．－See § lus．
§91．S，when marked thus， $\mathbf{S}, \mathrm{s}$ ，has the buzzing sound of $z$ in aral，as in has，amuse，rosy，sec．－Sce § 108.
Note．－There has been much diversity nmong orthotipista as to tho noumd of $s$ in words commenclig in dis，as disam，dishurse，see．Walker lndd down this rule：＂It［ $s$ ］ought always to he pronounced like z when $\|$ anceented，and followed ly an aceented flat mute［ $b, d, g$ hard，$"]$ ，a liguld $[l, m, n, r]$ or a disedify，dizedify；disioin，dizjoln；dislike，dizllke；disloilye，dizlonge，se． Ecarcely any subacquent orthni pist has gone sn far．Welbater＇s Dictlonary gives s the sound of $z$ in the following words only；viz．，llisurm，dismsier，dis－ cern，disease，disheir，dishonest，dishouor，dismal，disoren，diesolve．Jerry nmi Knowles give the $z$ sound even in fewer worde．Oglvile，Cralg，and wright agree almost to a word with Wobstor．Jamonon，Smart，Worecater，linag，and agree almoss，to a word with Wabstor．Jamoson，smart，Worecter，linage，and fonley go much further；but，witli one or two exceptlons，the arthoiplats，as
In regard tu the pronumciation of gentile noums and adjectives rading in ese，
as Chinese，Joponese，Portumzese，\＆c，the orthoi：pists are not agrecd，and con mon usage is not eetted．Bany eneakers，capecially in this country，vive she $s$ In this termination ita hiesing souml，as in yes；while others－iucluding moz of the orthoepiste－give it the buzzing sound of $z$ in zeal．
There are a few verbs conding in se，which are also used as nouns or adjec－ tives．To distinguish be ween them，the s is vocalized in the verb，and whikpered in the noun or adjective ；as close，a．，and close，$v_{0} ;$ house，$n_{0}$ ，and house，v．；use， $n_{0,}$ and use，$v_{0} ;$ diffuse，$A_{0}$ ，and difluse，v．
§92．When the letter $s$ ，having regularly its slarp or hissing sound，follows a liquid or another $s$ ，and precedes a letter havidg the sound of consonant $y$ ，as $i$ in reversion，munsion，passion，and，in a few cases，when it precedes $\bar{u}(=y 00$ ）， as in sure，sugar，censure，sensul，the sounds represented by these letters are exchanged for that of the simple but very similar element represented by 8 h Thas the examples just given are actually pronounced re－ver＇shun，man＇－ shun，pash＇un，shoor，shoog＇ar，cen＇shoor，sen＇shoo－ul，though the theoretical pronuaciation would be re－vers＇yun，mans＇yun，păss＇yun，$\delta$－yoor，$\delta$－yŏg＇ar， cens＇yoor，seas＇yoo－al．Sheridan gave the same sound to the sy implied in su，in all cases in which this combination oecurs，even when under the aecent，saying shoo－preme＇for sū－preme＇，shoa＇i－cide fur sū＇i－cide，\＆ec；and for this he has been strongly coudemned by subsequent orthoeipists．But slthough this pro－ nunciation is now very rarely heard，and that only among provincial，affeeted， or illiterate apeakers，it was formerly in vogue nmong many of the most culti－ vated and fashionable people in England from the time of the Elizabethan writers down to that of Garrick．
In a few words，$s$ alone takes the sound of sh，as in nausea，Asiatic；or rather the c or $i$ ，in such cases，does double duty，uniting with the $s$ to siguify the sound of sh，and，at the same time，retaiuiug its usual vowel character．
§93．When $s$ is preceded by a vowel io an accented syllable，and is foliowed by a vowel haviog regularly or theoretically the sound of consonant $y$ ，these two letters are commonly pronounced like ah，as in adhesion，revision，explo－ sion，confusion，pleasure，risual，ustry，\＆e．（Sce § 107．）So also io scission， abscission，rescission，though the 8 is not preceded by a vowel in the accented sy llable．
§94．$S$ is silent in the worts aisle，isle，island，demesne，puisne，risconnt， and generally at the ead of French words adopted into Evglish，as chamois， corps，vis－a－vis，\＆e．

## SH．

§95．This digraph（whicl is unmarked）represents the simple sound heard in shelf，flesh，usher，\＆e．
Note．－This element is formed hy n partinl cantnct of the apper nurface of the tongue，near the tip，with that side of the arch or dome of the palate which is Just above the gums of the front tecth，and by an effusion of unvocal breath through the narrow aperture left for its escape．Organically considered，the sound is intermediate lerween those of s nnd consonant $y$ igenetieally con－ in rapid utterance，do not ensily mantaln thetr distinct character．Thus，if we pronounce the word sprecial in three syllables，speg＇i－al，and then try to reduco It to two，we shall find that it is difficult to articulate the $c(=s)$ and the $i(=y)$ by one contimous cthort of the organs，and that the intermediate sh is naturally substituted as an easicr and a closely nlljed sound．So with rersion，mission， sure，se．In metion，and other words ending in tion not preceded by＇s or by $x$ ， we may suppose the $t$ to lave been orleinally somded like s，as in words of the snme class is French；or the process of development may hare been，first，mo＇－ （i．on（wit）the ikept pure）；then mōt＇yun；next mōt＇shun or mo＇chun（sce § 60 ） and finally，by sinking the $t$ ，mo＇shun．
Sh is never silent．It is expreased liy，1．$C$ ，ns in o－ce－nn＇te，e－mn－i－a＇tion； 2. By $s$ ，as in nau＇se－nte，A－s1－n＇tc；3．By＇t，as in ne－go－ti－n＇tion；4．By＇ce，asy in
 8．By ti，as in cap＇tious；9．By the si implied tn xi（＝ksi），as in noxious；10．13 the ny implied in su（＝\＆yロo），as in mem－su－rn＇ton（men－shoo－rn＇shum）；11．By the sy implicel in $x u(=k=y o n)$ ，an in lur ${ }^{\prime} u$－ry（luk＇shoo ry）；12．By ch，is in chaise，
 15．By sch，ns lo schorl；16．By sci，ne ln co－s science．－See $\$ \$ 63,92,97,104$ ．
15．By sch，ns in schar！；16．By sci，ns in co．science．－See \＄夕 63，92，96，lot． It some words，particularly thone ending in ctate nid mite，some orthoepists nod mpeakers pronounce the vowcl diat metly atter the $c$ or $/$ sounded as shi as， enumeate（e－nta＇shi－ate），expatiate（eks－paishr－ate），sc．j others prononnce it Whth a slight sount，as of a wery bref or half suppressed e，represented in tho Dictionaries of smart and Conley by nn npostrophe，thus，cmuneiate（e－nतn＇ Nh＇ate），expatiut（eks pa＇sh＇ate），se．；others again，as Sherldan，Perry，and Dr． Webatco，constdering it in error to une the vowel twlee，prononnee these ter－ minations，and others like them，in one ayllable；as，enumciate（e munthate），
 are ghen in two gyllablea（shifatr），in necordanec with what fa believed to bo the hest and most gens ral unage；but $n$ reference to the present ecelion in gen－ erally uppended to words of thise elass，that the inquirer may not le teft in ignormee of the fact that there is a want of miformity in their pronuncfation．

## T．

§96．The sombl of $t$（unmarked），as henry In tone，note，noted，assets，\＆e．
Notr．－This sonnd differs from that of $d$（sce $\delta$ io）only in belng a whispered and not a vocal ulterance；that is to nay，the position or contiguraton of the artleulatigg organs is the same in hoth cancs，hut for a the treath eonthed within the month by it elone contact of the fore part of the tongue with the upper gum，la woenlized and rendered aurlible in a kort of murmur heard before tho organs acparatc，white for $t$ it la kept pure or unvocal，nud can not therefore be hourd thit the contact is foreftly troken．
Theslemt th the terminathos ters and tle afer $s_{1}$ as in fasten，listen，offon， castle，！ristle，throstle，\＆e．It is also silent la the worde chestnut，Chrisimas， hosfler or osiler，mistleine，and mortgayle．
§07．When tprecedes nny sne of the diphthongs ia，ie，and io，and，at the same time，fullows nu acented syllable not ending in sor $x$ ，it nssumes，in some words，the sound of sh，as ln negotiation ；but．In most enser，the com－ pound somed reaulting from the conlesecner of $t$ and $i$ is exchanged for thet of sh，as in puticnt，atation，parlinl，de．Whens or $x$ preceles the $t$ ，this letter

## xlviii

PRINCIPLES OF PRONUNCIATION.
and the $i$ following it either preserve thelr own sounds pure, or exchange them for the sound of ch in chin, as in question (kwest'yuu or kwes'chun), mixtion (mikst'yun or mika'chum), \&c. - Sce §60, Note, and § 8.

## TH.

§98. Th unraarked has its sharp or whispered sound, as in thing, breath, nuthor, athlete, \& C .
Note. - This is the sound made in linping. It is produced by putting the point of the tongue between the teeth, or by placing it agaiust the back of the upper front teeth, and forcing out mintomated breath.
Th has this sound generally at the beginning, and at the end, of words; but there are some exceptions.
§ 99 . Th marked thus, Th, th, has its soft, flat, or vocal sound, as in thine, then, with, mother, writheel, sc.

Note. - This sound differs from the foregoing only in being an utterance of roice instead of simple breath. It occurs chielly between two vowels in words purely English, 38 in leather, whither, heathen; also at the end ol the verbs mouth, begueath, and smooth; and when followed by a final $e$ mute, as in breathe, clothe, s.c.
Nouns which, in the singular, end in th sharp, usually preserve the same sound in the plural, as death, deaths ; sabbath, sabbaths, \&c.; but in the plurals of the following seven words the $t h$ is vocal; viz., bath, cloth, luth, mouth, oath, path, and wreath, as baths, cloths, Iaths, patha, Sc. Some pronounce truths, in the plural, with the vocal sound (trutis), but this is sanctioned by no orthotpist.
Although th in with has its vocal sound, yet in the compounds herewith, therewith, and uherevith, it is, according to the orthoëpists, pronounced with its sharp or whispered sound. Gaod usage, hovever, allows it to retain in the compound the same sound that it has in the simple word.
$\S 100$. Th has the sound of $t$ in phthisic (tiz'ik), thyme (tīm), and tbeir derivatives; and also in the proper names Thomas (tom'as) and Thames (temz). Thes is also its sound in all urodern kuropean languages except the Greek. In asthma and asthmus, it is said by the orthoëpists to have the same sound; but the great majority of speakers, in the United States at least, entirely suppress the th, pronouncing the former word iz'ma or is'ma, and the latter Is'mus or $1 z^{\prime}$ mus. - See § 108.

## V.

§ 101. The sound of $v$ (unmarlsed), as in vane, leave, civil, \&c.
NOTE. - This sound differs from that of $f$ only in being an utterance of the foice instcad of the breath, the organs assuming preciscly the same position for both sounds.
$l^{\prime}$ is never silent, except in sevennight (sen'nit), which is algo written senmight, and, according to some orthoiepists, in the word twelvemonth, colloquially pronounced twel'munth.

## W.

§102. At the beginning of a word or of a syllable, as wet, worse, inutard, this letter (which is uumarked) is a consonant, formed from, and nearly resembling, the vowel $\overline{o b}$, but requiriug for its utterance a closer position, or greater contraction, of the labial aperture; and this compression of the lips changes the quality of the sound, giving it a buzzing and articulative, instead of a smooth and purely vocal, character.

Note. - Some writers, however, maintain that the sonnd is merely that of a brief 00 ; in other words, that it is no consonant at all; but a simple experiment will serve to show the incorrectness of this view. If 40 is the ame as 00 , the word acōo raust be equivalent to oo pronounced twice in succession; but oon-oof is evidently a word of two syllables, and woo, as universally pronounced, is confessedly a monosyllable. Another consideration will belp ta establish the consonantal nature of $w$. Like the other consonants, it is capable of stopping or shutting a vowel, that is, of causing it to agsume its regular short sound, as in the cackney pronunciation of very as vě'wy, of horrid as hơ'wid, \&c.
After a vowel in the same syllable, $w$ is generally silent, as in glôw, thrōen, \&c.; tbough sometimes significant, as in fluw. With e it unites to form a diphsc.; though sometimes significant, as in flenw. With e it unites to form a diphthung, which is generally sounded like long $u$, as in dew, few, new; hut it is
sounded like
oon sounded like ō, or like $u$ in rude, if the letter $r$ stands before it, as in crew, shrew, \&c. It is often joined with it preceding o to represent the dipht.
sound otherwise expressed oy out, as in brow, cou, town, sce. - See $\& 39$.
$I F$
is always silent before $r$ in the If is always silent before $r$ in the same syllable, is in wring (ring), wrote (rōt) i also is the words ansucer (an'ser), sword (sord), toward (to ard the same syllable, as in quail, query, languid, assuage, sc.

## WH.

§103. The true sound of these letters is in the reverse order, viz., $h w$, as they vere written by the Auglo-Saxons; e. g., whet is pronounced hwet. The $h$ is bere a free emission of breath through the position taken by the lips in the formation of $w$. (See § 76.) Many recent phonologiste, bowever, contend that the combination $w h$ representa a aimple whisper of the ordinary 10 , to which it stands in the same relation as any surd consonant does to its corresponding gonant. Those who hold this opinion not only wrongly spprehend and deseribe their own pronunciation, but they overlook the fact that as a closer approximation of the lips in prononncing oo-et changes the sonnd to veet, so hoo-et in like manner gives rise to whet; and they forget that all words of this class originally began with an aspiration, as their etymological history cleariy sbowa. Thns what is from the A-S. hwat, O. Sux. huat, Icel. heattr, \&c. Compare also Scot. quhite and Eng. uchile, Lat. quid and Eug. what. In who, whole, whoop, whore, and their derivativea, the $w$ is silent.

## X

§ 104. This letter has tiro gounds; viz., its regular sharp sound (unmarked) like $k s$, as in expeet, and its soft or flat souud (marked $\mathbf{x}$ ) like $g z$, as in exist.

Note.- This latter sound usually occurs when the gyllable whech immers ately follows the $x$ begins with an accented vowel, as in auciliary, exert, exalt luxurious, and sometimes ulso in the derivatives of such words, cven though the $x$ is under the accent, as in exemplary, exhaletion, \&c.
In anxious, noxious, luxury, and a few other wards, the $s$ which is the second element of the $x$, and the following i or the first element of the following $u$, instead of retaining their usinal sound of $y$, are generally exchanged for the sound of sh; thus ank'stus, nok'shus, luk'shoo-ry, Sc.
At the beginning of words, $x$ bag the sound of $z$, as in xanthic (zan'-), xebec (ze'-), xylography (zi-), sec.

## Y.

§105. The sound of $y$ (unmarked), as in yavn, year, young, beyond, \&c.
Note. - This sound - which is heard in English only at the beginning of a word or a syllable - is formed from the vowel e by a claser approximation of the tonglue to the roof of the mouth, which destroys the pure rocality of the $e_{\text {. }}$ As $w$ is often confounded with $00,60 y$ is often confounded with $z$; but it may be proved to be a distinet sound by an experiment on the word ye similar to that by which $w$ was shown to be distinct from oo. - See § 102.
In the midtle or at the end of a syllable, $y$ is a vowcl, and has prectacly the sound that $i$ would have in the same situation. - See $\$ \S 15,16,35,48,54$, ※c.
$Y$ is often represented by $i$, when this letter accurs in an unaceented syllable before another vowel, and, at the game tlone, followa an accented syllable, as in fomiliar, minion, poniurd, \&c.

## Z.

§106. The regular and leading sound of this letter (which is unmarked) is heard in zone, naze, hazy, frozen, \&e. It is the vocal or हonant form of s. (See §90.) Iu a few words it takes the sound orizh, as in seizure (sézhoor) \&c. (See §10\%.) In rendezrous it is silent.

## ZH.

§107. This sound Is the vocal correspondent of sh, and ia uttered with the organs in precisely the same position.
Note. - It has arisen, in all English words, from an attempt to pronounce the sound of $z$ in mazc (sce § 106) and that of consonant $y$ (sce § 105 ) in immediate succession. On account of the vicinity of the contacts represented by $z h$ and $y$, succession. On account of the vicimity of the contacts represented by $i / h$ and $y$,
the eflort to do so causcs the tongue to assume the position requisite for saundthe cflort to do so causce the tongue to assume the position requisite for sound-
ing zh, or nearly so; and hence zh was naturally substituted as being a very sineing zh, or nearly so; and hence zh was naturaly substituted as being a rery sin-
jlar sound of easjer utterance. Thus, fusion may be supposed to have been ilar sound of easjer utterance. Thus, fusion may be supposcd to have been
originally pronounced fuz'yun, and thea fu'zhun; grazier, originally graz'yer, originally pronounced $f \bar{u} z^{\prime} y u n$,
and then orãk'er. - Sce $\delta 95$.
The combination zh is used in works on pronunciation to indicate the sound here described, on account of the relationship of this sound to that commonly expressed hy the ligraph sh. But the two lettera ah never come together in the proper orthogritphy of any English word. The sound for which they stand is represented by $z i$ (when the $z$ occurs in, or is immediately preceded by, an accented syllable, mid the $i$ is followed by another vowel, and occurs in an unaccented syllable, as in glazier); by the zy implied in zu( $=$ zyoo), as in azure: by $s$ in symposizm, Sc.; by si in certain situations (see $\S 93$ ); by $t i$ in the single word transition, as sometimes pronounced; and by $g$ in one or two words adopted from the Freach, as rouge.

## ASSIMILATION OF CONSONANTS.

§108. When a whispered and a vocal consonant come together in the same syllable, it is generally very difficult, in fluent pronunciation, to preserve each in its regular and appropriate sonud. Hence ft frequently becomes necesary to change the character of the one or of the other, in order to make the combination readily pronounceable. This is generally done, io English, by assimilating the souud of the second consonant, whether whispered or vocal, to that of the first. Thus, in chintz, the vocal consonadt $z$ assumea the sound of ita whispered correspondent $s$, lu order to uulte with the whispered $t$. On the other land, the $s$ in $u$ ruds is vocalized, or assumes the sound of $z$, for the sake of correspondiug with the vocal $d$. Sometimes, thongh rarely, the sound of the first consobaut is assimilated to that of the second, as in spasm (spazm).
This aflinity between these two classes of consovants is an important fact and one whieh nceds to be familiarly knowu. For there are four very common inflectional terminations which jnvariably come under its influence; viz., 1. Possessive forms in $s$, as maid's (maidz) ; 2. Plurals in $s$, as tubs (tubz), groves (grāvz); 3. $S$ in the third person singular of verbs, as loads (loadz), smooths (smoothz); 4. Preterits and participles in $d$ preceded by $e$ mute, as in dashed (dasht), ingulfed (ingulft).
It is neceasary to observe that there are a few words ending in dth, as breadth, hundredth, \&c., where the aspirate $i \boldsymbol{i}$ is not assimilated to the vocal $d_{i}$ and also that, after $n g$, and the liquids $l, m, n, r$, -all of which are vocal consonants, - a whispered consonant ean be pronounced without difficulty, and actually is pronounced, as in melt, terse, tempt (temt), fence, strength, \&c.

## DUPLICATION OF CONSONANTS.

§109. In many words, a consonant is doubled between two vowels; yet, ma such cases, no more than one articulation is ever used in speaking. In banner, for example, we close the organs but once between the first and second syllables; nor is it possible to use both of the letters $n$ withont pronomncing ban, then intermitting the voice entirely, opening the organs, and closing them a second time. Ilcuce, in all cases, when the same consonant is writteu twice between vowels, as in banner, robling, madden, letter, horrid, one of them only is represented by an articulation of the organa; and the ouly reason for repenting the consonaut is to indicate the fact that the preceding vowel has its short souod.

But although only one articulation is ever used, or, in fluent speech, possibly can be used, where a consonant is written twice, yet in gome words the articulation is dwelt upou for au appreciable space of time, producing an apparenl
duplication of the sound. Fhis effeet takes place in many derived words in which the prinitive ends or berins with the same letter as that with which a sumeradded suffix or prefix of English origin respectively begins or ents, as in soutless, foully, icenness, misstep, outtravel, umutural. The same wfect takeb place in most compound words, in whieh the secoad part begins with the same sound as that with which the first part ends, as in post-fown, hend-dress, halffixed. - See § 127.

## ACCENT.

§110. Accent is a parficular stress or effort of voice upon certnin syllables of words, which distinguishes them from the others by a greater distinctoess aud louduces of proaunciation. Aceent is of two kiats, priaary, as in in-tendf, where the full foree of the voice is on the last syllable, and secondury, as in su'per-in-tend', where the first syllable is distinguished by a strees greater than that laid on the second and third syllables, thoryh less than that ladd on the last. Io some words there are two secondary or sebordinate aceuts, as in 1d-com'pre-heu'si-bil'i-ty.
Note.- (1.) The gencral tendency of accent, whether primary or secondary, is to shortea all vowels bat u, when iurtber back than the peuultimate ayllable,
 and not süp'erabuntdant, \&c. This teudency gemeraly tails, if the necentrd sylballe is followed hy two unaccent vowels, as in petri-atl, mu'ni-ac; or hy two vowels of which the former only is uancentent, ns in de'ti-atition, orri-en'fal.
(2.) The primary and seconlary accents are, io certain cases, so nearly equal that we interchange them freely, "making," "s Wiaker remarks, "the secondary principal and the principal secondiry." Ile specifics tiolin, rejeree, pri-
tuteer, artisun, conrtesun, curlutan, and might have added ambuscurle, cavalfutcer, artisun, conrtesun, charlatan, and might have idded ambuscure, carnhchute, antlothers. Nearly all of these, except the first three, have now (according to able orthoëpists) transferred the primary accent from the last to ithe first syllable, at in ortisen, \&c., under the operation of a priaciple which is stated sythase,
in § 117 .
(3.) Hany in this country give a marked secondary aceent in certain words which properly have but one accent, and that on a pre-antepenoltijatte syl
 droning fault may be corrected by giving the aceented syllable in sharp per-
cussion, which carries the voice lightly through the resi of the word. It is also cussion, which carrics the voice lightly through the rest of the word. It is also
a vulgar American custom, In many words having an unaccented initial sylla ble followed by an aceentel one, to lay a nearly equal stress of voice on both,
 dhos. These absurd and glaring crrors are al ways extrencly offensive to Eng-
linhmen. Dickens, in his "Martin Chuzzlewit" rilicules them repeatedy" linhmen. Dickess, in his "Martin Chuzzlewit" rillicules them repeatedly.
"Perhaps," - he makes one of his characters say, "perhaps there ain't no such lofcittion in the ter'ri-todry of the great fonited states." It should be added, however, that, on their part, many English people go to the opposite ex treme of so hurrying or slurring nver unaccented syllahles as ofen to rob them of much of the very small proportionate foree which rroperty belongs to them.

## dividet usage.

§111. In quite a large number of words, there is a diversity of practice among good speakers as to the place of the primary accent. This arises mamly from a conflict between certain great prineiples which affect the seat of the aceent. A few of these will now be mentioned, with a view to necount for this diversity. 1t. is all that can be done in a bricf sketch like this.
 the aceent of the origimal words from whieh they ars formed, as resolve', from resol'vo, "tspect' (Shakespeare, Miltoo), from aspectus, Mimtostten'ce, from Hindostan', sec. So also worls derived from other English words by mbing oue or more syllables to their begiming or end, as within', from in, inyproter, from prop'er, po'etess, from po'ct, pleus'antly, from pleas'ant, sur'viccaule, from ser'vice, re-aljust'ment, from aljust', se.
§113. Second I'minciple. - Vase of utterance has some influence th deciding the place of the nccent. Ac'ceptable, refeptacle, and u'tensil, farlionalife in the days of Walker, have now taken the easier accentuation of accept'able, recept' d. ret, and uten'sil. Dis'crepant and dis'crepmery wre marked discrep'ant and discrepiancy by Lichardson, linag, Cragy, Wrjght, Clarke, und othrra. Sudaltern (instend of Wralker's sth'altern) is the necentuttion of 1:idhardson, Knowles, larclay, Craig, Clarke, and many more. Jyspep'sy has taken the place of dyspepsy in the markiny of Wrobster, Smart, Cull, Wrimht, Clarke, Cooley, dec, and is now the prevailing afcentations. On the same ground, emesestrul is preferred to en'restral by Jameron, Webster, Boag, Clarke, nud Cull, in monformity with campes'tral and other simitar words. Confistgor, like profes'sor, has enperseded con'fessor in this contuty, and has the support of l'erry, Ash, Rees, Barclay, loner, Clarke, Cull, Wehater, and Woreester. Rem'ediless, from the dimiculty of the sound, has berem danged in this enomety into remed'ilese, ns anactioned by Jerry, Ash, liees, Julton mut Kntha, mal Wrhspler. Con'sisfory has given why to consiaf'ory in the marking of knowles, Barclay, Rehl, Brande, Craig, lang, Clarke, Conley, and others. In like manmer, ocecssary and ac'cessory (as marked in most Finglish Didtonartos) are commonly pronounced in thats country uecestsurynndaceestary, as recommended by latey and Ash. These may merve ne instances of the aphlimton of this priucipte. It is an Important one in ita plawe; nnd, though it may five rise for a time to n diversity of pronunciation (siner some will cling to that wheh is sider and harder), chnnges of this kind, which promote ense of utternuee, will finally prevail.

## Dissyllanbef.

§114. Third Principles. - In worde of two syllables, there is a tendency (though with aumerous exceptions) to aecent the former or penultimate syllable, as in a'gue, bar'on, com'mon, dis'cortl, de.
Note - (1.) This tendency mects with a powerful counteraction in Principlo No. 1; viz., that of derirafires retaining the accent of their primitives, as in amuse', defer $\boldsymbol{r}^{\prime}$, offend', \&cc. It is natural, in such formatives, to place the accent on the radical' 1 sart of the word; and hence some hundreds of our diasyllablew, especially verbs and adverbs, have tbeir ancent on the last oyllahle.
(2.) Still, there is a vonstant struggle (especitlly among the comnon people,
who are unacuuanted with the derivation of words) 10 draw back the aceont to Who are unacquainted with the deriwation of words) to draw back the aceent to
the first syllable. Jlere arises another conflict, which produces a divernity of aecent; and the common people, being a majurity, are, on the whole, slowly gaining upon those who are tunacious of Principle Kio.1. Hence con'mate and in'uute (instead of comatet and innate') are gencrally prevalent in this country, and are now sametioned by Reid, Boas, Craig, and others. Al'cope (tor aleore') is more common among us, and it is so marked by recent English orthö̈piste, Boag, Craig, Culh, and others. Con'tents (for contenfs') has hecome the vencrall usage of this country, as sanctioned by Cull, Clarke, Wetseter, and Worcester. Rutuil (for retuifi) is now the marking of n maiority of the orthoi. pints. De'fail (for (fetcil') is less prevalent, but is sanctioned by Emart, (larke, Cull, Cooley, se. photlix and pretext (for protix! and protext') nre widely prevalent (especially the former), nall are authorized by some recent lexicogpreviants. Mom'lost (for bomberst') is the necentuation of Walker, Barclay, Rich. raphers. Cum and Webster; it is adnented by Worcester, and is extensively ardson, Cull, and bint this country. fintreau (for burcou') was admitted by. Dr. Webster, and is vory generally applied to the article of furniture, white burent is sometimes is ecry generanty appled to the article of furniture, white bureut is sometimes
used in reference to a departant of the government. Ac'cess (for access') is authorized by a number of orthoipista, and especially, nmong the later ones, by Knowles, Boag, Wright, Clarke, and Cull.*
(3.) No orthoeppist has given anyy sanction, it is beliwed, to rofmence and $f^{\prime}$ nance (for romanced and finctice'), or to re'search and re'source (for researeh and resource'), though these pronunciations are not infrequenty heard iu America. The two last ought especially to he discountenanced; for serref and sorere are English words, and should therefore remain (as they were from the first) the chiet objects of thought.
§ 115. We have noout eighty cases among our dissyllables in which the same word is used for a verb on the one hand, and a noun or nn ndjectise on the other. To distinguish between them, we aceent the uouns and the adjuetives on the first syllable, and the verbs on the last, as, a con'ecrt, to conrerd': a con'. tract, to contract', \&e. It is unuecessary to give the list in full, since the acceut of nearly all these words has been long settled by general usage.
Notr.. - There are a few cases of divided nse in nouns, wheh will sonner or later be male to contorm to the general rule. For example, usage will probably soon fix jumamently on perfect for the sijuctive, and perfect for the werb; Tre'mit for the nown, and permit' for the verb; protest for the noun, and mor
test for the verb; perfoume for the noun, nnd perfume for the verb; prot ceets for the noun, and proccedl' for the verb; deletail for the noun, nud retail' for the werb; in'crectse for the noun, and increase' for the verb; reftail for the noun, and rutuil' tor the verb; surf rey for the noun, and surrey' for the verb.
There is a tendency among many to aceent the first syllable of the soun ally, alli's; and, although without fanction at yet from a single orthoeipiet, it would not be surprining if this tendency should prewaid on the ground stated above,
making the noun al'ly, a/'lies, and the verh ctly'. The noun cement has been extemsively pronounced iom'ent, as distinguished from the werb to cementr; but Smart think this will not finally prevali; and the tendency doces certhinly now scem to be townd cement for the noun ns well as the verb.
§ 116. Wr have a few dissyllables which are at onee nomm nud adjectives These are distinguished by accenting the uouns on the first syllable, and the adjectives on the lust.

## nociss.

Au'gust, the month.
Con'part, ma engagement.
Exfle, banishament.
In'atinet, an impulse.
Min'ute of time.
Su'pine, in grammar.

AnJ:ctives.
August', noble.
Compart', close.
Exile', amall, elender.
lnstinct', animated.
Monote', very emal.
Supine', indolent.

The word gallont departa from the nhove rule. When it denotes n suitor, of "uttentive to ladics," it is necented gutlant', and is changed lato gal"hant when it mems high-spirited or charing.

## 

§ 117. Focrtif lumerik. - In words of three or more syllables, there is a strong tentemey to aeent the antepentht, or thided ayllable from the end, ab in cloquent, ac'cidrn, apportu'nity.

 acholaya on the one alde, and the hody of the people on the nther. Many neluham
 ofturrof: Ex. (forgetelng that they come from participlen, contemphotias, ifmonstrutus, No.), heranse by latin imber thetr second ajlluble in long; while tho mans of the penple, who know nothing of Latin, nat are goterned ly Encelinh maleskes, we equally bent on saying con'trmplute, efrmonstrate, oldinruf, Sc. The hater pronuscrition is how very extensively heard, and thus we have a "diviled usnge" is respect to these ant aimilat worda. There is a clase of botinkeal and minerniogleal ternan ending in phyllous nid phyllite (from Gir.

* Smart, kpeakiog on the wallect comaldered ahove, arya, "There is n aort of remumater to an nitimate arectit unleak on a yerb; hener the umanitiat d talk of scolling con'snts, till they tearu on the sinck exchange that the terhnical, ionun
 ciery one prononnew it who has not taken hla cue from the stock brokers.

中ü入ov, a leaf, as quadriphyllous, anthophyltite, \&c., in which the same struggle Is going on. Words hafing these terminations are differently accented by different authorities, and sometines even by the same anthority. Inowles, Gray, and Worcester are the only authorities who are self consistent in their pronunciation of such words, - knowles accenting them all on the antepenult, Gray as uniformly on the penult, and Worcester giving an alternative in every case, the $p$ Aultimate accentuation being his prefercace. There can lue no doubt that that mude of pronunciation whicls places the accent on the antepenult is most in accordance with the getius of our languige; and, in all probability, it will ultimately prevail over the learning or the pedantry of those who contend for the penultimate accentuation. In like manner, but'cony (for bulio'ny) has now, accouding to Smart, become the true English pronunciation, aud is so marked by knowles, Webster, Cull, Wright, Cooley, and many more.

Ele'ginic (for eleyisac) is the generat proonnciation of this country (in accordance with in nine arid most other words in -iac), and aas the sanction of Jerry, Knowles, Wright, Clirke, Cull, Cooley, and Webster. Cum'dary (forquanda'ry), in accord:are with hmmithry, and nearly every other word of three syllahles in ary, is onr prevalling prontmeiation, and is sanctioned by Maunter, Cull, Craig, Charke, Cooley, Worcester, and Webster. Many are disposed to reduce raga'ry to the same sccentuatiou (ea'gary).
§118. It is a just principle, ladd down by Walker, that "when words come to us uhole from the Greek or Latio, the same avecut ought to be preserved as in the origimal." Hence the following words oustht to be accented as here marked; viz., Abdo'men, hori'zon, deco'rum, diplo'ma, mnase'um, sano'rous, acu'men, bitu'men, and, on like grounds, farra'go, and uthers. Yet the strong tendency of uur language to accent the sutepenultimate in all words of three or more sylhables has caused this principle to be violated in some cases, as in am'a:on, cic'atrix, min'ister, or'ator, pleth'ora, \&c.
§119. Words of more than two syllables having the same orthography are geaerally distinguished by a difference of accent, as at'tribute, n , and attrib'ute, v., miscon'duct, u., and misconduct', v., o'verthrote, D., and orerthrow', v. In such cases, the nouns have the accent further from the end.
§ 120. With s very few exceptions, words of more than two syllables having the following terminations take the accent on the antepenult, or last syllable but two:-

| y: | as, democtracy, thenc'racy. |
| :---: | :---: |
| crous; | as, somnif'erous, umbellij' erous. |
| -thent: | ss, af fluent, circum'thent. |
| -fluous; | as, melliy"luous, super'fluous. |
| -gonal, | as, liag'onal, hexay'onul. |
| -gouy | as, cosmoy'ony, theog' my. |
| -grapher; | as, lexicoy'rapher, stenog'raphe |
| -yruphy; | as, photog'rophy, typeg'raphy. |
| toger: | as, philot'oger, astrol'oger. |

| corous; | as, carniv |

§121. Words of more than two syllables, ending in -cate, -late, -gate, -fy, -tude, and -ty, preceded by a vowel, have, for the most part, the accent on the antepenult; as, dep'recate, rus'ticate, recip'rocate; an'tedate, elu'cidate, accom'modate; prop'agate, del'egate, ju'migate; rar'efy, sanctify; qui'elude, lat'itude; soci'cty, acid'ity, clep'uty.
§122. The peoultimate syllable is to be accented in almost all words having the sonnd of $s h$, of $z h$, or of consonant $y$ immedately before their last vowel or diphthong, except those words in which ch is sounded like sh (as capuchin, kap-yy-sheen') ; e. g., dona'tion, conces'sion, illu'sion, controver'sial, vermil'ion, opin'ion.

## The Terminations IC and ICS.

§123. Words ending in ic and ics (derivatives from words in ckos or icus, in treek or Latin, or formed after the same analogy) bave their accent on the penult; as, epidem'ic, scientif ic, \&c. The following words are exceptions, Laving tbe accent on the antepenult; viz., ag'aric, Ar'abic, arith'metic, ar't senic, n., cath'olic, chol'eric, ephem'eric, her'etic, lu'natic, pleth'oric, pol'itic, rhet'oric, and tur'meric. Climacteric bas usually the antepenultimate accent, though some pronounce it climacter ic. In like manuer, the nouns empiric and schismatic, and the nonu and sdjective splenetic, are sometimes sccented on the penult, and sometimes on the autepeanlt.

## The Terminations E-AL, E-AN, avd E-UM.

§124. A part of the words haviog these terminations follow the English amalogy, and take the antepenultimate necent ; as, ceru'lean, hyperbo'rean, Her«u'lean, Jediterra'nean, subterra'nean, Tarta'rcan, marmo'rean; petro'leum,
perios'teum, succeda'neum. A part accent the penult ; as, adamante'an, Alluntc'an, colosssc'an, empyre'an, Epicure'an, Europe'ın, pygme'an; mausote'um muse'um. Orphean, being derived from Or'pheus, is mure properly acepted Or'phern. Must words endiner in eal accent the antepenult; as, lin'eal, ethe'real, fune'rcal; but hymene'al and $\xi^{\prime} d^{\prime} a l$ take the sceent upon the peuult.

## The Termixation OSE.

§125. There ls a considerable number of aljectives ending in ose, ss antmosc, comutose, operose, \&c., in the acceutuation of which the dictionaries are at variance with eaeh other, and many of them iuconsistent with thenselves. But all words of this elass, as Walker femarks, ought, from their torm and derivation, to be promonnced alike. Walker himself accents them all upon tha last syllable, and in this he is followed by Worcester and Cooley; but, ju tris yllables haviug this termiuation, most recent authorities, followiog he natural tendency of the language, as well as the prevsiling usiere, give only a secoudary accent to the last syllable, placiog the prin ipal aceent on the ant nenult. (See § 110 , Ňote, secoud paragraph.) As to dissyllsbic adjectives ending in ose, as jocose, morose, rerbose, \&c., they take tbe accent on the last syllable, with a few exceptions.
§ 126. In poetry, words are frequently used with an accentuation different from that adopted in ordinary speech, as in the following examples:-

> 'Twist that nud reason what a nice barrier'! Pope. Forcver separate, yet forever near. Ye icefalls! ye that from the mountain's brow Adown cburmous rav'ines slope amain. Coleridge.
§127. When two words of similar formation and the same accentuation sre contrasted with each other, the accent is transferred to the syllable of difference (unless this is already necented, as in em'inent, im'minent), and the regularly accented syllable takes a secondary accent ; thus, umblo' is pronounced un'du' when opposed to do or to out'do', and in'terrene ${ }^{t}$ is pronuuneed in'tervene ${ }^{\prime}$ when used antithetically to su'pervenet. So also with am'puta'tion sud $\mathrm{im}^{\prime}$ putu'tion, bi'cn'aiul and tri'cn'nial, op'gose' aud sup'pose'; ex'er'cise and ex' $^{\prime}$ or'cise, al-le'gu'tion and al-li'ya'tion ; prophet $t^{\prime}$ and jrof $\mathrm{g}^{\prime}$; do'nor' and do'nee', guar'cutor' amd guar'antes'.
§12S. When separately pronounced, all monosyllabic words have their rowel as distinctly sounded as if under secent. But in connected discourse, certain classes of monosyllables, such as articles, prepositions, pronouns, conjunctions, and auxiliary verlus, are asually unemphasized, and thelr vowel is liable to the same corruption of quality as that in sn maccented syllable of a word. But when nsed antithetically to other words, they are eniphasized, recejving a full and distinct stress of voice. Thus, the possessive pronoun their, when emphatic, should take the full sound of $\hat{e}$; ss, "Their (therr) interests, and not yours, are to be consulted." But when unemphatie, the sound becomes more obscure, verging toward, or falling into, that of the neutral vowel ( $u$ in urge) ; as, "They will not neglect their (thur) interests." So, also, there, when used as an adverb of place, is distinctly prononnced with the appropriate sound of the wowel; as, "I shall be there (thert." When, however, it serves merely to introduce a verb or a sentence, it takes the obscurer sound; as, "There (thur) is no difficulty in the case." In like manner, we say $\bar{u} ; y /{ }^{\prime}+t$, thatt, the, frơm, fôr, \&c., when we pronounce the words by thernselves; but iu actual use they become nearly or quite $\check{\text { un, yur, thăt, thü, frŭm, fur, sc. The foliowing }}$ passage from the Spectator, No. 80 , well illustrates this tendency to a corruption of the vowel sound in unemphasized monosyllables:-"My lords, with limmble summission that that 1 say is this, that that that that gentleman has advanced is not thăt that be should have proved to your lordships."

## SYLLABICATION.

§129. Words are sometimes divided into syllables for the sole purpose ot showing their proper pronunciation (as, a-dorn, o-voill); and sometimes in order to exhilit their efymological composition merely, without the least regard to their pronnnciation (as, ad-orn, ov-oid). In ordinary cases, - as where a word requires to be divided at the end of a line, - these modes of syllabication are to a certain extent combined. In the United States, the etymological principle is allowed to operate only in separatiog prefixes, suffixes, and grammatical terminations from the radical part of the word, where this can be done without misrepresenting the prounnciation. In English practice, howsever, words are nsually divided in such a manner as to slow their constituent parts indenendently of the pronunciation (3s, hypo-thesis, philo-sophy, belligerent, de.), and a siagle cousonant or a consouant digraph between two vowels goes to the latter (as, a-na-to-my, ae-li-cate, ma-the-ma-tics, \&c.). In this Dictionary, words are uniformly divided so as to represent their pronunciation in the most accurate manacr; but very frequently the root of a word may be exhibited to the eye without violating the orthoëpical principle of syllabication, and, where this is possible, it has generally been done, more partiomarly in the ease of accented syllables.

## sivo．SINOPSIS OF WORDS DIPRERENTLY PRONOUNCED BY DIPFERENT OLITHOEBPISTS．

Note．－The following Table contains a very careful selectlon of words of disputed pronupciation，being about 1350 in number．It would have been an essy task to make the liat mach larger；but it was deemed worse than useless on record all the modes of pronunciation which have at any time been in vogue， or to report the opinions or decisions of orthoipists in those cases in which hey have either becen clearly ignorant of usage，or have songht to impose upon the public some private fancy of local practice．It would，for example，be of no practical utilly whatever to quote Wialker an nuthorizing ma－róder，instead of ma－ruul＇er．or P＇erry as saying pül＇pit fur pul＇pit，when these modes bad only a tomperary or local currencs ；or to cite Knowles and Jameson as sanc－ tionins such birsarisros as tiart jet and ur－banef，when every boly else aays fïl wiet and ur bäner．The exhibition of promunciations like these might indeed gratify uthe curiosity of some，but is precluded by the very plan of the Synopsis， \＆oratter of douht or controversy．
s olt the ortheépists here citel，six－viz．，Perro．Walker，Knowles，Smart， Ccowy，and Cull－are Eaglishmen，and two－Webster and Worcester－are Americains．Many other orthoépists are quoted by Walker，Worcester，and Couley；but these are the only ones whose opinions are now eatitled to much ronsideration．They are arranged，as will he seen，in chronological order；and the latest edition published in the lifetime of their authors is tbat which is re－ ferred to．Forobvious reasons，however，the first columan contans the pronun－ ferred to．For obvious reasons，however，the first column contains the pronun－
ciations given in the present revision of Webster＇s Dietionary，and not those ciations given in the present revision of Webster＇s Dietionary，und not those
contained in the elition of $18+1$ ，rublishel shortly before Dr．Weloster＇s death． The authorities hrought forward in this synopsis are by no means deserving of equal respect．Jerry，the earlicst in point of time，claims some attention as preseatay the general usage of educated Englishmen of bis own day，and also because his Dictionary－in an earlier and smaller form－was extensively cir－ culated in this conntry during the latter part of the last eentury，and had a con－ uilcrable infuence upon the pronumeiation of those who used lt，and through them upon that of others．
W＂lleer，who was a contemparary of Perry，possessed superior qualifica－ tions for editing a poonouncing dictionary，In carly life，he was an actor，and familiarly aequainteo with Garriek and other theatrical celebritice who trod the atage at a time whon it was uaiversally considered the model of correct speech． hishly distinguished in that capacity，was patronized by many of the English nohility and gentry．In 1791，he published the first edition of＂his＂Critical Pronouncing Dietionary and Expositor of the English Language．＂This work， which embolicd the results of macb careful observation and long－continued pronunciation，and ran throngh many editions both in England anm America． Aronunciation，and ran throngh many editions both in England amb America． Ahe hast edition revisel by Walker himself，though custom has much changed in lagt editinn revisell by Walker himself，though custom has much changed have taken its place，Walker＇s opinion and authority are too important to jus－ hnve taken its place，Walker＇s opin
dify us in rejecting them altogether．
In 1835 appeared the＂I＇ronouncing and Explanatory Dictionary＂of James \＆inowes，a native of Ireland，a lecturer on closution，and a nephew and pupil of Thomas sheridan，the orthoipist and lexicographer．Kinowles＇s Dictionary was intended as as sort of revision of Sheridan＇s，but can hardly be revarded as an improvement upon the original．Although the author resid for many years in London，his style of pronunciation is，in a multitude of cases，dechledly provincial．In quite a number of instances，he erecme to have put forward some favorite pecnliarity of his own，in total disregard of actual isace．Compura－ tively little weight，therefore，is due to his decisions．Yet it should be suid
that occaslonally the pronanclatlons which he advocates，though they may bn opposed to the best English practice，accord with that which generally obtaiu in the Enited Ftates．
In the fullowing year， 189 ，apprared a most excellent and elaborato Pro－ nouncing Dictionary by B．H．Shart，who，in an＂epitomazed＂eslition pub－ lished a few yeara later，ayys of himself，＂I pretend to reflect the oral uage ol English such as it is at present among the sensible and well－edueated io the Jritish motropolis；and I am now to state what my opportunities liave been of leanning that usage．I am a Londoner，the son of $n$ Londoner，and have lived nearly all my life in London．My early days were spent la proparina for a liter nry profegsion；nnd a＇Practical Grammar of English Pronunciation＇whe r published thirty years ago，is an evidence of the fength of time during wbich my nttention has bern fixed on the srabject ln view．It has been said whet example of pronunciation should be taken not exelugiwely from band that the suly in the lighest eirelea，nor fict flom those who dy from those who move learning．I have been able to observe the usage of nall classes．As a teacher ot learming．I have been able to observe the usage of all classes．As a teacher of fame chesish lancuage anc literature， 1 have beets matited into some of the firf families in the kingdom；ns one partial to books，I have come muchinto contart with bookish men；while，as a public feader and lecturer，I have been obliged to fasbion my own pronunciation to the taste of the day．Tlus pruphred，I may not unwarrantably believe that my opinlon may have some value with those who seek the opinion of soother to regulate their pronunciation．
The Pronouncing Dictionarica of Dr．Joseph E．Worcester glve eildence of protractel and conscientious attention to the subject of pronunciation，and dia play both soundness of judgraent and refinement of taste．
The small but comprehensive Dietionary edited by Aranld J．Cooley nffords faithfal view of the prevailing style of pronumelation characterizing the gencral body of cultivated speakers in Gireat Britain and Ireland．It is a productiou of considerable merit ausd authority．
The work eited under the name of Cull is the＂Comprehensive English Die－ tionary＂of Dr．Tohn Ogilvie，In which the promunciation is professediy ＂adapted to the best modern usage，＂by Richard Cull，Esq．，of London，ome of the eontributors to the Penny C＇sclopedia，and well known as an enthasiastic and luarnea phonnlogist．＂ilhe best modern usige＂however，is nasumed to be that of edueated socicty In the city of London；and the assertion ia made that 4 ja system of pronameiation ean be regarofed as correct unless it be in etrict ennformity＂with this afantard－an assertion which most persons in the tuitud States would be apt to regard as involving a sophistical infercuce from nin invalid nssumption．It must be added that thongh both Smart and Cull claim to ex． hibit the most approred London asage，they differ widely and often as to what that usime ls．One reason for this differemee probahly fond often ad to what attuntion to analogy，in doubtful cases，than Suart does；and another is that lie sometimes apparchtly mistakes his individual practice for that of the best le sometimes apparchtly mistakes his indiridnal practice for that of the best
London society．Fet his opinions are，for the most part，worthy of attentive Londrn society． consinleration，as being those of an lndelmendent，feholarly，and judicious obser－
ver，who has for many years made the anbject of promunciation $n$ special atudy

I＇lse diverse syatums of notation emploged by the orthoipists whose modes of pronunciation are here reported are of neceanity represented by that which is used in this Jictionary；and nlthough，ns a confequence，the precise shade of sommintendud may not in all eares be expressed with minute accuracy，jet is is belicyod that viry few，if any，luportant discrepancies will be foubl to exist．＇J＇he chfef instance of want of correxpondence is the absence of noy signo nnswering to the 刀postrophe used by smart and Conley，in ecotalin classes of worls，to mark＂the sound ns of $n$ partially sajpressed $e ;$＂and that siry is therefore ruale use of in noting the pronunclation of these authorities in the БуиорвІя．

## OBSERVATIONS.

THE English language, as being the offisping of two parent languages very different in furm and spirit, and having beeu, in nu inconsiderable degree, modified in lts growth by inflnences from varions other tongues, contains, as was Inevitable, very many anomalies; and in no particular are these anomalies more numerous and striking than in its orthography, with the single exeeption, perhaps, of its orthoëpy. Neither the Anglo-Saxon nor the Norman-Freach could boast of any great regularity in orthography, though the spelling of words in these two languages was far less arbitrary than it is in the modern English. When, therefore, the vocabularies of these two languages, widely different both in their orthographical structure and their phonological character, were combined, the result was a lagguage in which the orthography has almost reached the extreme of irregularity. To such an extent, in fact, have the signs repre senting sounds been multiplied, that many of the letters are pronounced in several different ways, while the letters, or combinations of letters, for a single sonnd amount, in some eases, to scorcs. Indeed, it is computed that many words of no more than two syllables may be spelled in several thousand different modes, by the use of combinations actually employed in other words in the language. The word scissors, for instance, may be thus written, as is computed by Ellis, in nearly six thousand different ways. Of course, comparatively very few of these possible forms of splliug are ever employed in the ease of any one word; yet the causes of disorder mentioned above bave operated so effectually, that the words in respect to which eveu the most careful writers are at variance are numbered by thousands, while those in whiel an orthography coutrary to sualogy has been universally adopted are equally numerous.
Bad as is the orthography of the present day, however, it is order itself com pared with that of a few ceaturies ago. It would, of course, be unreasouable to expect that there should be any gencral correspondence of orthographical forms in the works of different authors before the types of the printer gave prominence to certain forms, which fiually became recognized as staudards; and man useripts conclusively prove that the wildest license prevailed in spelling words Even proper names, which would naturally receive more attention, and be writ ten with more care than any other class of words, are found recorded in great multitudes of forms, several variations being fometimes found in the same manuscript or work. Disraeli states that "Leicester has subseribed his own name eight different ways," and that "the uame fillers is spelled fourteen different ways in the deeds of that family." A still more remarkable instance is stated

Lower; namely, that the family of Mainuaring has the extraordiuary number of one hundred and thirty-one variations of that sincle name, all drawn from authorized documents. But there is evidence that, in the midst of all this con fusion, there were some writers who were atteutive to the proper forms of words, and who were notable exceptions to the greneral rute. The spelfing of the Or mulum, which was writteu in the thirteenth centiry, though strange and cumbrous, is very remarkable for its regularity; and the author strenuously urges his copyists to follow his orthagraphy with the utmost exactness. (See page xlii) So also Chancer, more than a eentury later, carefully revised and corrected his own works; and he enjoined upon his seribe to "write more trew" that which was intrusted to him, saying that he was obliged "it to correct and eke to rubbe and scrape," because of the uegligeuce and haste with which it bad been copied.
The invention of printing pommenced a new era, though for a long time even this had little effect to fix the exterior form of the lauguage. Indeed, much of the perverse orthogralily of books priated two or three centuries ago is to be attributed to the minter, who often inserted or expunged letters, as the length of the liues or convenience of spactug required. It is no uncommon thing to find, in the works of Clancer, Spenser, and other early writers, or in books printed two or three centuries ago, the same words occurring in several differ ent forms upon the same page. Even as late as the time of Shakespeare, orthography was very monsttled; aud, as llalliwell states, the aame of the great bard thimself was written in more that thirty dhferent ways. The printers, however, were not solely, nor even chiefly, responsible for this confusion; for it is certain that their arbitrary changes aud deviations from nniformity would not have been tolerated had they been made in defiance of established usage; and there is abundant evidence to prove that writers themselves were careless in the ex treme. The fact must not be overlooked that in the writings of Wyeliffe, Chau cer, and other early antliors, there were still may remants of the Semi-Saxon inflection, which have since utterly disappeared, and which gave to some words a variety of form to be attributed neither to the carelessness of the writer, nor to an unsettled orthography. For eopious examples, see pages xxxix-xli.
The irregularities foumd in early books, though continuing for so long a time, were neither nnoticed nor looked upou with indifference. On the contrary not ouly have numerons complete systens for the reformation of orthograpiny been proposed, but various scholars have adrocated, with more or less acuteness and learuing, changes in regard to a great number of particular points. Sir Thomas Smith. Secretary of State to Oueeu Elizabeth, was the first who
endeavored tc introduce a regular system of orthography; after him, William Bullokar bronght forward another system; a few years after this, Hir. Gill, Master of St. I'aul's School, in Londoa, a teacher of cousiderable aminence, proposed another scheme; and, still later, Charles Butler devised a nove method of spelling, and printed a book in which it was employed. Thes writers agreed essentially as to the manner in which they sought to attain the eud proposed, their plan boing to reduce the spelling of words to uniform priuciples and make it practically phonetie, by the use of new characters, by applying various diaerltieal marks to the old letters, and by making the letturs. or their combinations, represent certain definite sounds. It is needless to say that these prujects were never earried into practice.
In the time of Charles I., many ebanges were introduced, and it was very common, even among emiuent seholars, to spell words according to their mununciation, omitting such letters as were deemed superfluous. These attempts at improvement, bejug made upon no settled or uniform principles, had little or no permaunt effect upou the language. Another elaborate plan was pronosed, in the seventeeuth century, by bishop Wilkins, similar in its general character to those of Smith, Bullokar, Gill, and Butler, and equally uasnceessful.
The celebrated Dietionary of Dr. Samuel Johnson, first publishect la 1755, has contributed more than any work written either before or since, to fix the exterand form of the langnage and to diminish the number of irregularities; for though mumerous inconsistencies are to be found in it, and mauy oversights, the learning of the author, and the sound judgment and practical wisdom which he displayed, gave it at ouce an authority which it has not even yet entircly lost; and the orthography of the present day, though it has reecived some important sodificatious since his time, is substantially the same as that exhihited in his dictionary. The chauges in the spelling of worde, introduced by Ir. Johnson, were generally made in order to resture the aneicat orthography, or to remove some anomaly; aud perhaps the most important office performed by his work was its having settled nsage definitely in favor of some one of the numerous forms in which many words were written, thus removing the cause of much confusion. Among the most prominent slteratiors made by him were the restoration of $k$ to many words which had long been written without it, as in musick, rhetoric $\mathfrak{i}$, and the like, and the insertion of $u$ in the termination of many words which previously ended in or, as in ancestour, authour, errour, aul others. The former of these changes, a rerival of the "aucient practice," wats not received with favor, nor was this spelling adopted by subsequent writers; the latter, as it was thought to be justified by the analogy of the eorresponding termination cur iu the French, through which language many, perhaps a majorit $5^{\circ}$, of the words affected by it were derired from the Latin, was generally followed. Johnson's uractice in this respect, howeser, was not in harmony with his theory; for he wrote only about half the words of this class with the endiugr our, leaving the rest in or, though for no reason that would not equally aplly to them all. let this notable inconsistency was not ouly overlooked, but was perpetuated, and still exists in the orthography of English writers. In the United States a diferent practice prevails, as will presently be mentioned.
The scheme of Jimkerton, who, in $\mathbf{1 7 8 5}$, under the name of Robert Meron, proposed to reuder the language more euphonious by adding rowels to words ending iu consonats, and by pronouncing the silent final vowels of others, in a manuer perfectly arbitrary, is too ridiculous to deserve further mention. About twenty years later another absurd plan was published by Elphiastone, who printed a book iu order to introduce it, but without suceess. Duriug the last eentury, several Euglish divines, as Larduer, Benson, aud others, employed in many words methods of spelling peculiar to themselves, ehictly such as had long been abandoued, as in writing ie for tinal $y$; in adding $e$ to words cuding in ss; and in the use of such forms as profice, persuc, procede, sais (tor says), and the like. So also Mitford used many singular forms, such as ilund, intire, enderor, meer (for mere), tho (for thongh), spred, \&c. It is proper to meution here also the innovations of Archdeaeon Hare, in the preseut century, who, on the ground of prounaciation, etymology, and analogy, employed iu his works such forms as atchieve, compell, enure, jry (for fiery), forein, imey (for inveigh), higkth, ploukman, smugler, and the like. He also omitted the hyphen ju many compound worls where it is usually inserted, and adroeated the omission of the apostrophe in the possessive case, and the substitution of $t$ for ed in thoso preterits in which the latter termination is pronounced like $t$; as in exprest, fixt, pullisht, \&c., for expressed, jixed, published, \&c. This substitution of $t$ for $\epsilon l^{\prime}$, however, is not peculiar to 11 are, since it is merely a return to the usage of the early writers. This spelliug of the preterit is also net unfrequently found in modern poctry.
Besides the imperfect attempts mentioned abore, many plaus have been devised it different times, for redueing the spelling of words to absolute uniformity and the greatest simplicity, by a complete reform in the method of representing the sounds of words hy written characters, that is, by employing a new alphabet in which each sign stamds for one and only one definite sound, and
pach sound is represented by one auld only one character. Such a mothod of spelling was invented by Dr. Franklin, in the last ecntury, though he never brought it to perfection, and scarcely used it, except in a brief correspondence with a friend. The most recent, and in every respect the most comprehensive and philosophical scheme of this kind, is that of which Mr. A. J. Ellis, of Cambridge, England, has been the most prominent advochte nud representative, and to a large extent the inventor. The nlphabet in this system contains nbout forty ebarncters, each of which represents but a single sound, so that n word written necording to this metbod could be prononneed in only one way. Although this system has received great publicity, and has had many caroest dupporters, it has gained no ground in the public favor, and has finally been abandoned by its nuthor as a means of reforming orthography. The seliemes of Lepsius, Mibller, and others who have endenvored to form philosophical nlphaibets of universal application, are fardly to be mentioned here, as they are but iuclirectly related to English orthography.
In lises, Dr. Wrebster published his dictionary of the English language, and the elaugee in spelling advocated by hini have had no inconsiderable intluence upon orthorraphy, especially in the United States. These alterations were propused by him chiefly on the ground of etymology snd of nalogy, from : desire, on the one hand, to make the words correspond, as far ns practicible, with their primitive forme, so as to reveal more clearly their etynologieal affinities, nud on the other to reduce ns much as possible the number of anomalies and excentional cases. Of the words whose orthorraphy had been changed for the former reason, many were restored to their ordinary forms by Dr. Webster himself in the second edition of his work published in 1510 , and others still were restored in subsequent editions. The alterations of the second
class have been recelven with tivor nut adoptad by a large portion on the writers in the Cuitell states, and by some authors also in England.
It is to be observed that many of Dr. Webster's deviations from the usnge of his time were not imovations, but restorations of older forms which were onve very generally employed. The most important pointe in which his orthography differs from that of most other modern lexicompnithers, and in reference to which there is still difference of usage smong scholars, are stated in the following list, in which the numbers refer to the sections of the Rules for spelling Certain Classes of Words (see below), where the cases are mentioned particul. rly. These are, the not doubling the final consonant in derivatives of worde like travel, worship, \&c. (§ s); doubling the $l$ in installment, enrollment, \&c. (§ !); doubling the timal lutter in such words as fulfill, iustill, \&e. (\$ 16); retaining the i in derivatives of villain ( $\S 2 \pi$ ); writing defense, offensc, de.. for defence, $\approx$, fence, de., and practice for practise ( $\S 28$ ); writing the ternination er for wh in world like center, meter, \&c. (§31); writing mold nad molt without $\because$ ( $\$ 34$ ).
With respect to certain cases, it seems proper to add a few words. Dr. Webster wrote the chemical terms ending in ule and ine, as chloride, chlorine, de. ( $\$ 32$ ), without the final $c$ in most cases, deeming the letter superfluous, nud not demanded by usage, which war variable. This letter is retained in this volume, in uccordnnce with the almost voirersal practice of the prescot day. The word written by Dr. Webster oxyd is now spelled oxide, for reasons stated in section $3 \times$ and under the word itself in the llictionary. It may be remarked furthur with regard to words often written with the termination re, but which in this book are spelled with the endiug er, that this orthography is but a restoration of the older spelliug; aud the same is truc of the substitution of the termination or for our.

# RULES FOR SPELLIYG CERTAIN CLASSES OF WORDS, 

FOUNDED ON THE ORTHOGLATIY OF DR. WEDSTEL, AS FXIITBITED IN TIIS VOLUME.

§1. The letters $f$ and $l$, at the end of monosyllables, and stinding immediatuly after single vowels, are generally doubled: as in staif, cliff, doff, muff; all, bell, hill, toll, mill. The words clef, $i f$, of, pal, and sot, are exeeptions.
§2. The letter $s$, at the end of a monosyllable, and stambling immediately after a single vowel, is generally doubled, exerpt when it is used to form the possessive case or plural of a noun, or the thirif person singular of a verb; as in grass, press, hiss, moss, trass. The only important exceptions are as, gus, hus, u'us, yes, gris, his, is, thus, and us.
§3. Besides $f, l$, and $s$, the ouly consonants that are erer doubled at the enirl of a word are $b, d, g, m, n, p, r, t$, and $\approx$. The following list contains nll, or morrly all, the words in which these letters are donbleds wamely, abu, cob; ath, oth, ruht ; bigg, fgg. snigg; lamm, scomm, mumm (to mask); inn, bthm ; wupp; guarr, purr, err, birr, shirr, skirr, burr, liurr, murr, purr, mitt, ,hith, smilt, lutt ; fizz, fuzz, buzz, huzz, мuzz.

Now. The words let, net, and set are sametimes incorrectly spelled lett, nett, and sett; mal some other words which slound have the dhal hetter single are spelled, by some writers, with it doubled.
§4. A consomat standing at the end of a word immediately nftur a diphthoner or donble vowel is never donbled. The worls ail, peat, hanh, flom, nul maim, are examples. 'The word guess is only an apparent exception, ne the $u$ does mot strictly form a diphthong with the $e$, but serves merely to render the $g$ hard.
§5. Monosyllables ending, as prononned, with the somblof $k$, and in which c follows the vowel, havo usually 7 ondded nfter the $c$; as in black, fleck, clid\%, linack, and buck. The words lac, sac, talc, zinc, ploc, roc, soc, urc, murc, orc, nud jisc, are exceptions.

Words of more than one syllabte, ending in ic or iac, whieh formerly rindud in Ff, also words derived from the hatin or Greek lamenuyw, or from other fonrees, and similar to these, or formed in an anatogrons manmr, are now writen withont the $k$; as, maniar, elegiac, cubic, music, public. Thu world derridek is nu exception. Words of more than one syllable, in which $c$ is premend by other vowils than $i$ or ia, commonly end in ck; as, arrack, harrack, leaumock, hillock, wetlock. 'The words ntmamac, sundurac, limbec, manier, ,iber, huroc, are exceptions. Almame, limbec, and hawoc, however, uro sometimes written with $h$ after the c, cepecially in Jioglami.
 beginnlag with $c, i$, or $y$, the letter $k$ is inserted after the $c$, in order that the lattor may not be inaccurntely pronounced like $a$ hefore the followlig vowel: แк, rolic, colicky; trafle, traficket, traficking, trafficker; tule, tulcky; ainc, zincliy.
§ 7. Iu derivatives formed by adding a termination beghming with n vowd to monosyllablers and words accented on the last ay lhablo, when thesw worde and in a aingle consonant (exerpt $h$ anel $x$ ) precealed ly a single vownd, that conso. numt is doubled: ns, clan, clamish; plan, planued, piannlng, plemner ; bug, turgguge; hot, hotecr, hottcst; wit, witty; cubut, cubuthor: whit', alnt'ted, abot'. ting, abettor: begin', begin'aing, begin'ncr; inferf, inforret't, infir'ring. The ronsomat is donbled in these worls in order to preserve the whort somad of the vowel, as ntherwise the latter would be linhle to be pronounced Iong.

lötesh, and aiēted, if the consonant were not doubled. Words of this class, itu which the finm consonimit is preeeded by $q u$, followed by a siagle vowel, form no exception to the rule, since the $u p$ rforms the office of the consonant $v$ : as, squab, squablish, squably; squat, squatting, squatter; quit, quitted, quitting i acquit', acquit'tel, ncquitling.

The derivatives of the worl gas (excent gassing and gassy) are written with but one s; ns, guscous, guscity, gasify. lix'crllince, as buing from the Lath cecellens, retains the double $l$, though one $/$ has been dropped from the terminntion of excel'. Bestules these, the ouly exceptions to the rule are those derixatives in which the aseent of the primitive is thrown back upon another syllable: us, cabal', cab'ulism, cabralist; prefer', proference; rejer', reflerence; defirt, deference. It is no rsemplon to this rule that chancellor, and the derivatives of metul and crystal, as metalloid, metallurgy, crystalline, erystalli=e, mad the like, are written with the $l$ donbled, since they are derived respectively from tho Latin concellurins (through the Fronch), and metellum, mal tho Gircek apiotadAos. So also the word trangrillity retains the fonble $l_{\text {, as being from tho }}$ Latin tranquillites, white the burlishs dervatives of tromquil, thenerb ofth writen with two l's, are more properly written with only one, as tromquilied, trunyulizer, ambllu like.
§ 8. When a iliphthong, or a dlarguh representiog a vowet somut, precedes tha final eonsonamt of a word, or the neeent of a word ending in a single consouant falls on any other syllable thatn the last, or when the word ends in two diferent consmants, the thal consonat is not doubled la derlvatives formed by the midition of a turminatlon hecriming with a vowel: as, derub, datebed, damber ; med, wedy; bricf, briefor, briefist; rewel, reweldel, rerteling : travel, trumeling, traw cler; pmifit, profited: act, acted, actor; perform, perforner ; stand, standing.

The flat consomint is doubled for the dorivativers of a few words coding in $y$, in oreme to dimialah the liability to its being pronomecal like $j$, before $e$ or $f:$ : as. henbug, hambuggrd, humbuging, periurig, prericiggot, 'the word roalen ta
 it Is written roollea.
Noma, - Thero is a large elass of words emdug in a single cousomant, anu

 dexire to previt the vows of the fina syllable "f the primitive frons hedng
 Mulinet in $l_{\text {, with also a few of other trmanstions. The following list, the warls }}$ in when are chictly verlon, Includes the most importam of those in regard is

 chemel, chised, compromit, cotusel, cudyrt, dinh, dishumb, doterl, drivel, durl, rm-

 richat, worshin. Worecstur doublas the flunl letters of all these words, exerpt purallel, in forming derlvitlves by the nuldition of turmanatlons begiming w.:h vowels, though lo remarks, whit respect to thone rading in 1 , that "It lwates areords with the malogy of the langrage" to spull thilr deriratives with hut oue $l$. Sunart rethins the duable consonant in this clase of words solely on
the eround that nsage favors it, but remarks that "the double $p$ in worshippect, worshipper, \&c., the second $l$ in travelling, traveller, dce, are quite unncceesary on any other score than to satisty the prefudices of the eye." Cooley doubles the consonant in a majority of the derlvatives of words of this class, but writes a single consonant in many, as in those of apparel, varrel, bevel, chamel, drivel, gambol, \&e. Perry wrote the derivatives of these words with but one l, sceording to the rult, aul the same practice was advocated by Walker. Conformity to the regular rule hats been advocated also by other eminent echolars.
§ 9. Derivatives formed from words ending in a double consonant, by adding on or more syllables, commouly retain both consonants : as, ell, ebling ; oddl, odlly ; stif, stijness ; fell, fellable; skill, skillful, skillfulness; will, willful, willfulness ; thull, dullness ; foll, fnllness. So also the double $l$ is retained in the words instullment, inthrallment, thralltom, and etrollment (from install, inthrall, thrall, and enroll), in order to prevent a false pronunciation if spelled with one 2. Jtany writers and lexieographers, especinlly in England, omit one $l$ in these words, as also in the derivatives of still, will, dull, and full, formed by adding the syllables $l y$ aud ness.

The derivatives of poutiff are exceptions to the rule, being written with only one $f$; as, pontific, pontifical, pontificial, and the like. Oue $l$ is also dropped in a few words formed by adding the termination $l y$ to words ending in $l l$, in order to prevent the concurrence of three l's: as, ill, illy; dull, dully; full, fully. Words similarly formed by adding the termioation less, however, are written either with the three $l$ 's, a hyphen being inserted before the termination, or with two $l ' s$, and without the hyphen; as, bell-less or belless, skill-less or skilless, smell-less or smelless.
$\S 10$. In derivatives formed from words eading with silent $e$, the $e$ is generally retained when the termination berine with a consonant: as, pale, paleness; hate, hateful; incite, incitement; chaste, chustely, chasteness; nove, movement. When, however, the e is immediately preceded by mother vowel (except e), it is often dropped from the derivative: as, due, taly; argue, argument; true, truly; awe, auful; and the derivatives and compounds of these worts.

The words wholly, wursling, wisdom, abridyment, acknowledgment, lodgment, julgment, and the compounds of some of these, are exceptions. The last four, however, are written, by many authors, abridgenuent, acknoneledgemont, lodgement, judgement.
§ 11. In derivatives formed from words eading with silent $e$, when the termimation begins with a vowel, the e is gemerally omitted, exeept in the erses mentioned in the aext paragraph: as, britte, bridal; guide, gutuance; plume, plumage; use, usage; griere, grievance; come, coming; shope, shaping; move, movable; sule, salable; flcece, ficecy; force, forcible; true, truism.

The e is retained iu the words hocing, shoeing, and toeing (from hoe, shoe, and toe), in order to prevent a doubt, as to the pronumelation, that might arise in ease it were omitted. It is retained, also, in the worls dycing, singeing, springeing, swingeing, tingcing (Trom dye, singe, springe, saringe, tinge), to distinguish them from dying, singing, springing, suinging, tinging (from die, sing, spring, suing, ting). The word mileage, as commonly written, does not onit the $e$, though it is sometimes, and more correctiy, spelled milage. The words lineage, lineal, ant pincal, thoush apparently exceptions, are not really such, since they are derived not directly from line and pine, but from the Latin 7inea (through the French), linealis, and pinea. The e, standing, in a derivative, before a termination beginning with $a$ or 0 , and immediately after $c$ or $g$, is retained in order to prevent the promuciation of these cousonants with the hard sound; as, peace, peacable; notice, noticcoble; manage, manageable; change, changeable; adrantage, culvantageous; ontroge, ontrageons; mortgage, mortyageor. The latter worl is sometimes very improperly written mortgagor, and promounced mor/-ga-jor.
§ 12. In derivatives formed from words ending in ic, by adding the termination ing, the $e$ is dropped, and the $i$ changed to $y$, in order to prevent two $i$ 's from coming torether: as, die, dying; hie, hying ; lie, lying; tie, tying ; rie, rying.
§ 13. In derivatives of words cuding in $y$, 1 receded by a consonant, and formed by appending any termination except one beginning with $i$, the $y$ is usually changed into $i$ : as, icy, iciest, icily; mercy, nerciless; tidy, tidiness; modify, modifics; foygy, fogginess; earthy, earthiness; pity, pitiful.
The derivatives of adjectives of one syllable ending in $y$, preceded by a consonant, are exceptions, and usually retain the $y$ : $a s$, shy, shyness ; sly, styest ; dry, dryly; spry, sprycr, spryest; wry, wryness. But the adjectives drier, and driest, from dry, are commonly written with $i$ instead of $y$. Derivatives formed by adding the termination ship, as secretaryship, suretyship, lerdyship, and the like, also retain the $y$, though some authors write them with $i$, according to the rulc. The words babyhood and latlykin are likewise exceptions. The $y$ is also retained in the possessive case singular of nouns, when formed by adding $s$ with the apostrophe; as, country's, everybody's.
§ 14. Derivatives formed by affixing a termination to words ending in $y$ preceded by a vowel, generally retain the $y$ unchanged: as, gay, gayety, gayly; play, player, plays; sway, swayed; obey, obeying; joy, jouful; enjoy, enjoyed; buy, buying; gluey, glucyness.

Tho worls daily, laid, paid, said, saith, slain, and staid (from day, lay, poy, say, slay, and stay), with their compounds, are exceptions. Staid, however, is sometimes written stayed. Derjvatives from words ending in $u y$, as colloquies, from colloquy, are not exceptions to the rule, as $u$, in such cases, is not itrictly a vowel, but stands for the consonant $w$.
§ 15. Derivatives formed by appending a syllable beginning with a vowel to words ending with a vowel sound, generally retain the letter or letters representing such sound: as, huzza, huz̃aed; agree, agrecoble, ogrecing; , weigh, wcighing; llough, doughy; ceho, echosd; woo, wooes; bow, bourch; bearl, beauish.
I erivatives of words of this class ending in silent $e$, as also those formed from words ending in donble $e$ by adding a termination beginwing wathe, drop the

Tinale : as, hoe, hoed; sue, sued; owe, owed; free, freer, freest; agree, agreed The eases mentioned in sectious 11,12 , and 13 are also exceptions.
§ 16. Derivatives formed by prefixing one or nore syllables to words ending in a double consonant commonly retain both consunants: as, tipstaff, rebuff, befall, inthrall, disinthrall, foretcll, undersell, fulnil, enroll, emboss (from staffi buif, full, thrall, tell, sell, fill, roll, boss).
The word unth is an exception, being always written rith one $l$. Those worls of this class which end in $l l$ are written by some authors, especially in Euglowd, with one $l$; as, befal, inthral, foretcl, fulfil, enrol. The worde distill and instill should be written with the $l$ doubled, though they are often written distil and instil, with only one $l$.
§ 17. Compound words formed by joining two or more words commonly retain all the Ietters of the simple rords; as, stiff-necked, well-bred, dull-yed, savc-all, zeide-mouthed.
There are wumerous exceptions to this rule, many of them compounds which by long use have acquired the force of sidgle words. They sre the following: namely, some compounds of all and well; as, clmighty, almost, alone, already, also, although, altogether, always, withal, therewithal, wherewithal, welcome, welfare - compound of mass; as, Candlemas, Christmas, Lammas, Michaelmas, \&c.;-words of which the second part is the adjective full; as, arthil, hateful, ruefill, avoeful; also, the words chilblain, fuljil, namesake, necherchief, numsiull, prastime, standish, and whercver.
§ 18. The plural of nouns regularly eads in $s$, or, in certain classes of words, in es.
When the noum in the singular endes with such a sound that the sonnd of $s$ can unite with ii, aud be pronounced without forming a scparate syllable, sonly is adiled In forming the plural : as, sea, seas; trce, trees: woe, woes; canto, cantos; rirtue, virtues; purlieu, purlieus; claw, clows; cab, cals; panic, panics; beal, beads; chicf, chief's ; lag, bogs ; path, paths ; lock, loclis ; bell, bells ; gemo, geme; fun, fous; cup, cups; car, ears ; act, acts. A few plurals from nouns ending in o preecded by a consonant, end in es : as, echo, echoes; cargo, cargoes; cmbargo, cmuargoes; motto, mottoes; pututo, potutoes. Other nonns of this class generally form their plurals regularly, though usage differs with regard to some of them. Those in which final $o$ is preceded by a vowel form their plurals regularly. The plural of allath is written alkalis or alkalies; that of rabli, either rabbis or rablies. With regard to other nouns ending in insage differs, though they are more properly written with tle termination $i s$.
When the nonu in the singular ends with sueh a sound (as that of $c h, s h, j, s$, $x$, or $z$ ) that the sound of $s$ can not unite with it iu pronunciation, but must form a separate syllable, $e$ is ioserted before $s$ in forming the plural, unless the word ends with silent $e$, in which case the latter serves to form a separate syllable with s: as, church, churches; rush, mushes; age, ages; lace, laces; gas, gases; case, cases; loss, losscs; box, boxes ; maze, mazes.
To express the plural of a letter, tigure, or any character or slgn, or of a word mentioned withont regard to its meaning, the letter $s$, generally precoded by the apostrophe, is appended, as in the phrases, "The two l's in all;" The two 0 's in 400 ;" "T'wo *'s in Orion; " "The why's and uherefore's of the question." Some writers, however, omit the apostrophe in such cases, joining the $s$ immediately to the letter, character, or word, is in the phrases "The two ls in all;" "Two *s in Orion;" "The pros and cons." Others still write the manes of the letters with their proper plural endings, Instead of the letters themselves; as, the two ces, efs, ells, esses, and the like. The plurals of letters are also rarely expressed by kimply doubling them, without adding any plural sign; as, the two ee in bee, the two $l l$ in all; but this practice is not to be commended, as ee, $l l$, \&c., are properly read double e, double $l$, and the like.
§ 19. Nouns ending in $y$ precelted by a consouant form their plural by adding es and chauging $y$ into $i$ : as, morcy, mercies; lady, ladies; sliy, slies; army, armies; pity, pities. This rule includes words ending iu quy, in which $u$, being pronounced like $u$, is strictly a consonant; ns, collequy, colloquies. The plural of proper nouns ending in $y$ preceded by a consonant, is formed by changing $y$ into ies, according to the rule; as, "The three Maries." Many writers, however, form the plural of such words hy simply adding $s$; as, "The three Narys;" but for this practice there seems to be no good reason.
When the singular of a noun ends in $y$ preceded by a vowel (except $u$ haring the power of $u$ ), the plural is regularly formed by adding $s$ only : as, day, days : key, licys; money, maneys; attorney, attomeys; alloy, alloys; guy, guys. Some plurals of the latter clags are often inaccurately written with the termination ies; as, monies, attornies, and the like.
Note. - Nouns nots ending in $y$ formerly ended in ie, and formed their plurals regularly by adding $s$; as, memorie, memories; mercie, mercies. $Y$ was finally
substitnted for ie in the singular, but the plaral was not clanged, and still resubstituted for
tains its old torm.
§ 20. The plurals of a few nouns ending in $f$ or fe are irregularly formed by changing $f$ or $f e$ into ves. The following words, with their compounds, are the principal examples: namely, life, lives; knife, knives; wife, wives; leaf, leaves; sheaf, sheaves; loaf, lawes; beef, beeves; thief, thieves; calf, calves; half, halves ; elf, elves; shelf, shelves; self, selves; wolf, colves. The plural of stoff is some. times written staff, but more commonly staves, except when it means a corps of officers, either military or civil, in which sense it is always written staffi. The plural of wharf is generally written wharfs in Eugland; in the United States it is more commonly, hut jmproperly, written ocharves, as it is also by some recent English writers. The plurals of hoof and turf, formerly written hoores and turyes, are now written hoojs snd turfs. The plurals of other nouns ending in $f, f e$, of $f f$, are formed regularly by the sddition of $s$ only.
$\S 21$. In the following nouns, the pharal is ristinguished from the singular only by a change of the $10_{\text {wel }}$ or vowd sound of the word: namely, man,
nen; woman, women: goose, geese; foot, feet; tooth, tecth; brother, lurethren douse, lice; mouse, mice. Componnds ending with these words form their plu rals in the same manner: as, foeman, foemen; tormouse, dorinice. Worle which end in the syllable man, and are not compounts, form their plurals regulnrly, by adding sonly: ns, cayman, coymans; desman, desmans; frmun, firmans; tulisman, tulismans; Germun, Germens; Jiassulman, Wussulmans. The plurals of talisman and Mussulman are sometimes, by a gross blunder, written totismen, sud Mussulmen.
§22. A few plurals end in en : namely, brother, brethren ; chilel, chilelrea ox, oxen. To these may be ndded the obsolcte forms eync, kine, shoon, hosen housen (from cye, cou, shoe, hose, house), the first threc of which, though they Lave reccived a sigghtly different form, cod, as pronounced, with the somm af $n$.
§23. The words brother, die, pea, and penny, have each two plnrals of difer ent forms and with different significations: as, brothers, male children of the same parent, also, members of the same socicty, association, class, or profession; brethren, members of the same religjous or ecclesiastical body, the word in this form being rarcly used except in religious writings, or io scriptoral language, where it also has the same meaning that brother lans in ordinary languare; dies, implements for making impressions by stamping, or for making screws, also the cubical parts of pedestals : dice, the cubical blocks ascd in games of chanee; pens, seeds of the per-plant, when a definte number is mentioued; pense, the same in bulk, or spoken of collectively ; pennies, the calns, espe cially when a rlofivite number is mentioned; pence, the amount reckoned by these cuins. See also these words in the Dictionary. 'The word ucqumintance is written, in the plural, eitlier acquointance (smpposed to be a corruption of acquaintants) or acquainlances, the two forms having little or no diflerene of mending
824. A few words, mostly names of anlmals, lave the same form the the plural as in the singular; as, deer, sheep, trout, and the like.
§ 25. Miny words adopted from foreign langnages retain their original plurals: as, datum, data; criterion, criteria; genus, genera; lurva, lerise; crisis, crises ; mntrix, matrices ; focus, foci; monsicur, messienrs.

Many worde of this class, while retaining the original plurals, lave also a aceond, formed after the malogy of English words of similar termination: $\mathrm{an}_{2}$ furmula, formule or formulas; beau, bcaux or benus; index, indices, or indexes; strutum, strata or strotums ; bandit, bunclitti or bundits; cherub, cherubim or chevubs; scraph, seruplim or serophs. The plurals of the list twa words are sometimes incorrecty written cherubims and serophims, with louble plural terminations, from irnorance or forgetfulness of the fict that in llebrew words $i m$ is a plural ending.
\$23. Io certain loase compoumds consisting of a noun followed by an adjective or other qualifying expression, the plural is commonly formed lyy making the same chanere m the nonn as when it stauds alone: as, court-martiol, courtsmartiul; cousin-german, cousins-german; son-in-lıu, sons-in-low. Wै। W, however, the adjective is so elosely joined to the nown that the compound las the force of a fimple word, the plural of the compound is commonly formed like that of any other word of the same termination: as, cupfil, cupfuls ; handfiul, hemiffils.
§ 27. There are many words, besides those mentioned lin the preceding paracraphs, in respect to which usarge, even that of the best anthors, ts variable. The most important of these words are mentioned in this and the suceroding sectioun.
The derivatives of the word villoin, as villainous, villaimy, sec, thomgh often written villanous, dillany, de., properly retain the $i$, anonriang to the practice of many writers, like those of other wards similarly entint in aint as, motntwinous, from mountain; cuptaincy, flom coptcrin; and the like.
The words connection, deplection, inglection, and roflection, follow the apellher of the words connect, deglect, inflect, and regect, though oftou writtur cepurially in Furland, connexion, deflexion, inflexion, and reflexion. Sce Noteunder Cuxsectun, in the Dictionary.
The word wor, though often written without the fionl $c$, should retain it,

 tham one syllable, having a similar termination, onit the $e ; n, d o, j n, n o, s o$, conto, motto, potato.

The words defonse, expense, offense, and pretense are properly writted thus, thomeh often spelled with of lnstead of $s$, for the $s$ belangs to tho worifs from which they are derived, and is also nsed in all their derivatives. Sce Note under OFFENSE, In the Dictionary.
The worls drought and height were formerly written drouth and hight, and are atlll very often thus writien in Amerien.
The verb protice is thus written like the noun, fo preference to the form pactise, thongli the latter sjelling is used by many writers, enperinlly ln Finifland. The difference in speltiog between the noun amd the verb is properly observerl, in words of thls kind, only in sucle as are necented on the last syi. lable, as dovice, terise. See Note mbler Practisi:, 10 the Dietinarty.

Derivatives of the Greck ह̈doa (seat, base, side, pronomnerd hèt'ra), an poly. hedron, tetrahedron, octahedral, and the like, are properly thus writton whth $h$ before the $e$ of the termination, but are sometimes written polyedron, fetraillron, ocfiël ral. \&e., without the $h$.
§ 28. There is a class of adjectives ending elther In able or to ible, of which a lurcre mijority have the termbation able; as, blamable, laulahle, legible, mutaWe, novigalle, vendible. Many of then are from Lath words maling th abilis or ibilis; some are from the French; and not a few are formed by blding tho formination th Logrlish words. Those from Latin whris end resperflitly In able wo ible, accorllng us they are derlved from worls "milng la abilis or ibiles a a,
mutable (Lat. mutabilis); potable (Lat. potabilis); credikle (Lat. credibilis); rendible (Lat. qendibilis). Thase formed from English worils generally end in able; as, atonilable, citable, forilable, langhable, liable, salable, semriceable. There are a few worle respecting which usage js variable: as, addible or aduble; conversable or concersible ; inferable or inferrille; scferuble or referrible.
§29. There is a class of words begioming with en or in, as enclose or inclose, cnquire or inquire, ensure or insure, and the like, many of which take sither form of the prefix indifferently. They are chiefly derived from the Latin, either directly or through the lrench, the prefix in belonging to the former layguage, and en to the latter. In some of these words, en is to be preferred; in others, in ; in many of them, either may be used indiffercutly. Seethe List of Words Spelled in Two or Jore Wrys, and the different worls of this elass in the Dietionary.
§ 30. There was formerly considerable diversity of usage in resperet to the termiontions ant and ent, both of which were, in eertain eases, used almost indifferently; as in the worls confilumt or conident, dependant or dependent, and the like. Present usacre, however, is definitely settled in favor of one or the other form, in nearly or quite every word of this class, thongh not always upon uniform principles. In the few words in which both these terminations are retained, it is the more general practice to write the adjective witb ent, and the common noun with ant, while the correspondiner abstract noun ends in ence, as in the udjectives confident and dependent, the common nouns confidant and dependant, aw the abstract nouns confilence and depentence. In the case of very many words, however, the adjective ends in ant, as also the common noun; while the abstract nom ends in entec, as in the adjectives attendant and repentant ; the common nouns aftendrnit and repentont ; and the nbstract nouns attenlance and repentance. It may be remarked that the terminations ant and ance belong properly to words derived from the Frenell or from Latin verbs of the first conjughtion; cnt and ence to words derived from Latin verbs of the other three conjngations. Fuce and ance were also formerly confounded in some worls, the one ar the other being used indifferently.
§ 31. Tbere is a class of words cuding in er, some of which are writteu by most anthors with the termination re; as, center, meter, theater, \&c., whinh are often writun centie, metre, theatre, de. A've, chanere, lucre, macre, massacre, aml ogre, retain the termimation re, in order 10 prescrve the hard sound of the c and $g$.
§ 32. There are two classes of chemical words endincy reapectively, as more commonly written, in ide anl iuc, in regard to which usage has been variable. Most of them were formerly written without the final $e$; but it is now the almost univereal practice to retiin it: an, bromide, chloride, iorlide, sulphide; chlorine, fuorine, sulicine, stemine; and the like. The word tannin is alwats written without the final $c$. Oxile is now generally written with the termination ide, thongln formerly by many written oxyd, from the supposition that the $y$ of the last syllable regresinuted the $v$ of the fireck $\delta \xi$ lis, from which the word is derived; whereas the last eyblable is simply the same as the termination of the words bromide, suluhide, and the like. See Note under OxiDE, in tho Dictionary.
§33. There is $\Omega$ class of worls ending, as pronounced, with the soubd of long $i$, followed by $\approx$, some of whicls are differently witten, by different autlors, with cither ise or ize to reprenent this mound : $n s_{\text {, crificize or criticise } ; \text { civilize }}$ or civilise i nuturalize or naturalisr' j jotronize or patronisc. Thene worils are mostly verbs, aml ure ehlefly derlved from Greek worils ending in $\ell 5,6$, or from French words anding in iser or isc. There nee $a$ fow from other sourees, but formed in analogy with thoso lorived from those languares. Those formed From freek warila have tho turmination izc; ns, anathematize, characierize, clramatize, tantalize. 'We woris cutcolhise and crorcise are exceptions. Thoses formed ha an ambogons manner from Englah worms aro likewise writtom with ize; as, albumonize, berstardize, memorize, sensitize. 'lhose alerival from tho Fromeh varb premde (particlple pris or prisc) ent in ise; as, npprise, comprise, emprise, enterprise, surprise. Of those formed from lroncli words other than prenalre, or which have correspoming forms in tho Fronch, a majorlty end in ize, llongh in respeet to some of them umago is varlable; us, ciriti, formalize. orgutnize, sutirize. Jhe following are the primelpal Furhsls verbsendiog In ise ; namely, allertise, alvise, uffranchise, apprise, colechise, chastise, circumeise, comprise, compromise, criticisp, demise, dexpise, deroisc, distufrathehise, disfram chise, disguise, divertise, emprise, enfranchise, enterprise, exercisc, cxureise, fronchise, mamunaisc, misprise, premise, reprise, terise, supersise, surmise, surprise. It may be remarkel that must of those in requet to which usago varlus are more froquently written in linglumi whth the termination ise, and th the Enited Stater with tho lormfantlum $i=c$.
§ 31. The werts mold nul molt, and thelr componnda and derleatives, are wrietem bin thls Dlethonary with o lnateal of on, In amalogy with the words bnid, bolt, colt, gold, \&e., from which the a lua berm dropped. Nost nuthora, how ever, write these words mould aml moult, and thelr derivatives in like mamer.
§ 35. Thure is a numbrous class of worda almost unlversally written, ln tha
 Whth the terminution our: as, candor, firtor, honop, labor, rumor, rigor. Eing-
 lwing written with or hlughem books. Sue the Observations on Orthograpliy, proflxed to theso rules.
§ 30. There is a sinall clas of words coding with the ayllable ped (from Iat, pee, pealis, foot), the terminathon of mome of which was formerly, and la alsil frequestly, writteu prede: an, biped, contiferl, millipert, palmiped, quadruped, atiped, nad the like. Thw worth hipet and quadruped are malverally writhn whthout the final $r_{\text {, aml the others, accordlog to the beet usgeg, fiould be writ- }}$ ten in the sarme mancr.

## A LIST OF WORDS SPELLED IN TWO OR MORE WAYS.

The design of the following List is, in the first place, to present those words great number, omitted. It is that of worls of more than one syllable ending in in reference to which present usage, 10 the United statee or in Eugland, sanetions more than one method of spelling the same word; and, secomedly, aconsinlerable number of words, which, though aut diftereutly spelled by liviag reputable writers, yet are to be fond in the orthography of the second columu in the works of respectable authors of the last ecutury, or the early part of the present century, aud are, therefore, ofted presented to the eye of the moderu reader. Such a list, it is thought, will be fouvd very convenient for consultatiou. For any thiug more full, a Glossary would he the appropriate resort. The first column, in the following list, presents the orthography recognized in the hody of this Dictionary as the preferable one, or that io geueril use ; the second column, one less desirable. or the usage of former times. Those forms cmploy, but which are toun only in writiags of the past, have a dagger prefixed. One class of words which might properly have beea added, is, trom their

| ** In this Dictionary, Trords from forelon Ianguacres, both ancient and modern, are usually printed in Ttalies. though many of them are not ordinarily so priated in other works; as, Aureleark, duaculus, Abandon. |
| *** Componad words, which, in ordiuary writing and printiog, have their constitucut parts separated by a hyphea, are trere distinguished from those which are usually and properly writtea add priuted witbout one, by the use of a heavjer hyphen than that eraployed for the mere division of words jato syllables; as, Able-bodied. Words haviag prefises or initial syllables which are commonly separated from the other syllables by a hyphen, are distinguished in tho same way ; as, Re-cniorce, Medico-legal. (Lxxii) |

DICTIONARY

9 F

## TIIE ENGLISII LANGUAGE.

## A

1. The first letter of the nlphabet in most of the known languages of the earth. It is natarally the first letter, because it represents the firat socal sound naturally formed by the organs of speceh, viz., that heard in fur, mort, sc., being the sound uttered with a mere opening of the month without constrint, and without any effort to alter the natural position or configuration of the lips
$A$ has, in Englist, two regular sounds; the "long," as in phice, fate, and the "short," as in fut Its occaslonal gounds are the "broad," ns in wril, full; the "Itallan," as in futher; aud four others, as in fist, fure, what, many. As the name of a letter of the alphibet, and when usedemphatically an a noun or an artiele, it la always pronounced $\bar{i}$; butwhenever it occurs as an uncmphisized word in a purely English plirnse, or forms or ends an unaccented syllable, its regular sound is that of a in for, somewhat shortened; but it is apt to lose this distinctive eliar anter, and to fall into if faint mol obsebre sound, like that of $u$ lu tub. Sce Prin. of I'ron 2. An adjective, commonly called the fudelinite article, and signifying one or uny, but leas emphatically. It is placed before nouns of the singular number denoting an individual objeet, before collective nouns, and also before plaral nons when the adjective few or the phrase great mumy is interposed; as, a dog, a house, $a$ man; a bumised, u fleet, " regiment; $u$ fce persons, a great mumy days. It is a contraction of the Anglo-Saxon an or ane, one, and is aubstituted for an, for the sake of euphony, before all words beginning with a consonant roumb, except words beginning with the sound of $h$ and having the areent on any other sytlable than the first; ne, $a$ table, $a$ woman, $a$ year, a unit, "eulogy, $"$ oneruess, \&ec. Furmivly uri was used both before vowels and consonimts.
In such exprearions as "twenty lemges of day; "a hundred prounde a year," "n sluliar " yard," \&e., It denater curh, miry. Sce An.
2. An obsolete and harbarous cormption of have, of he, nad sometimes o. $/$
3. (Mus.) The nominal of the sixth tone in the model major seale (lhat in C), or of the firmt tence of the minorseale, which la named alter it the seale in A minor. It is the sombl of the necomal open string of the violin, - 1 sharp ( $\Delta \#$ ) is the name of a musleal tane butermediate betwern A and 13 . betweren A and $G$
4. Thim letter nerves as a prefix to many Linclinh words, ns in aslecp, "foot, "fict, erfround, a-going, a-suyiny, wowke, u-c-lnouledye. In anme cimca, it is a contraction of the prepositions an, in, itt, uf, to, for ; as in aslurp fir in slepp or on sletp, ubluze for in a blaze, choartl for on lionrd, afoot for on foont, aground for on the gromal, ultays for on theys, ath for to do, areait for writ for. Whern nered wefore participlea or partictplal nouns, it autmits of a minalar explanathan ; as, $a$ huntong, iu the net of hanting, a golne, in golus, \&e. It wata formerly placed before nome without helng jolned to theon as a morfix; ne, "The worhl runs a whecte" [f. e., ond wheels]. R. Jonson. - In other cames, it Is contractel from the A.S. Inscparable particle ge i for O. 11. (ierman ga- gi., Ru-i in (imethic gu ; which forms verbe from verl)a, Rnhathatives, adjuctlves, and as a sort of uuginent to the pase partlejple. In some casta, it only increnses the force of the worl, without any essential mblition of mennlog, as in afier. The original mignifention of thly prefix is ofith. Together, correqponding to the lathe com-,

gewaro), acold, abide, aboile, 太r. In some words of Greek origin, $r$ is privative, giving to them a negative rense; as in ahaptiston, q. v: before a vowel it becomes ru; as in aholymots, from bvopa, name. In the Julian cillendar, $A$ is the first of the seven dominical letters.

## ABANDON

2. To bsnifh. [Obs.] Tia better far the enerries to alund shir. for Mag.
Quite from thy borders.

 bitraniness, mercy, wiving over, with the prep. a, Lat. ahe Bundon is from the Fr., Pr. ban, It, Sp., ,
Lit Pg. banulo. L. Laticbandum, barinum , a public proc-
 L. Lat. bannire, to proclaim, to proasribe; -from the Goth. bandy jum, baryjan, to show by signa, to designate; bandecu, UGudvo, sign ; Russ. binhun, to bind. See BaN:] 1. To outlaws.
or away. [Obs.]

That he might . . . abandon them from him.
Udal.
2. To give up absolutely; to forsake entirely; to renounce utterly; to relinquish all counection with, coacern in, interest for, control of, or the like; to desert; to quit ; to relinquish; to leave.
Hope was overthrown, and yet could nat be alandoned.
3. Reflexirely, to give one's self up without at tempt at self control; to yield one's self parrestrainedly; -generally in a bad sense.
4. (Har. Lute.) To relinquish to underwriters all claim to;-used of an insured person who gives up chin clain to the property eovered by the policy which may remaiu after lose or damage by a perii iosured against.
Syn. - To give np; yield; forego; cede; surrender; resign; abdicate; quit ; relinguish; renounce; desert;
forsake; leave: retire; withdraw nom. - To ABANDos, fersake; leare: retire; withdraw rom, - To ABANDON,
DESERT, Forsake. These words agree in represchting a persen is giving up or leacing some object, but differ ats to the morle of doing it The dintinetive sense of abandort is that of giving up a thing absulutuly and finally, as if
placed under aban; as, to abandon one's friends or proplaced under a ban; as, to abandon one's friends or pre-
fession. Crabb is wrong in saying that it is slways nsed fession. Crabb is wrong in saying that it is a wass hed enterprise, or abandoning a shipwrecked vessel. The Latin original of desert was primarily applied to the cass of deserters from milhtary service. Hence, the verb, when spplied to persons in the sctive voice, has
usually or always a bad sense, implying some breach of fildity, honor, fe. as, to desert one's eolors, to desert flledty, honor, de. is, to desert ones colors, to desert
one's post, to desert one"s primelples or duty. When ones post, to desert one s mimeiples or daty. When used hille passive, the senss is limt necessaliy bad; as, Forsake is literally to seck forth snd awny frum. It therefore, as its distinctive sense, supposes previons mion; as, the blood jorsook his cheeks; or that the thing left had been familiar or freguented; as, to fors ahe old friends, 10 forsake the paths of vectitude, \&x. It may be used either in a good or a lad sense.
A băn'don, h. 1. The act of abandoning or deserting; relinquishment. [OUs.]
2. One who abandons, or who is abondoncd; one 1oreaken. 1 Obs.]
complete givag up dong'), 2 . [Fr. See supra.] A self arising from absorntion in some favorite of ject or emotion, and sometimes a disregard of appearancea, produciog either earelees negligeace or
A-bŭn'doned, p.a. Given up, as to a viee; hence extremely wicked, or sianing without restraiat; Jrreclainahly wicked; as, an abanduned youth ; an abandonel villaio.
Syn.-Forsaken; desctted; destitute: abject: forlorn; profligate; cerrupt; vieins; ulepraved; reprobate; wicked: hemons; criminal; vile; odions; detestable. dBandoNed Paofligatb, Reprosate. These atjee-
tlves saree io expressing the idea of great persolnal thes sotree in expressing the thea of grent persomal
depravity. Profigate has reterence te open sad shamedepravity. Profigate has reterence te open sad shameduct; as, a proftigate court, a profigate ministry.

You are so witty, proflugate, and thin,
At once we think theo Milton's Death and Sin.
Abandoned is stronger, snd has reference to the searing of conselence and hardening of heart prodnced by a man's giving himself wholly up to ininuity; as, an abcandoned villain, a man of abandoned character. Reprobate is still stronger, and describes the condition of one who is so entirely abandoned as to leave no hope of his recovery: Thus, we speak of a person as "given over to a
A-bй́doni-e
e', n. (Lav.) One to whom any thing
is auandoned.
A.bunflon-er, $n$. Oqe who abandous.

1. To lower or "lupress; to throw or cast down. To abase the eye." Jitacon. [here.]

Ilis spear he gan abase.
Spenser.
2. To cast down ; to reduce low; to depress; to humble; to degrade; -applied chichly to the passions, rank, oflice, and condition in life.

Whosoever exalteth himself slall be abowed. Maft, xxii, 12. Syn. - Ta depress; humble: degrade; bring low: debase: cast duwho - Tu AadsE, DELAsA, MFGRaDE. These words agree the the of bringing doun irom a higher to a lewerstate. Abase has recrence to a bruming down
th condion or feclages as, to abase the prumb, fu abase th condition or techings : as, to abase the juruth, to abase
one's self before Gind. Debase has reference to the bragone's self before Gind. Debase has reference to the bring-
ing down ot a thing in purnty, or makiny it bane. It is therefore, always nsed 11 a bad sense; as, to debase the therefore, always used in a bad sense; as, to debase the
coin of the kingdon, to debase the mind by viluths lidulgence, to debase one's sale by coarse or vulgar expressions. Deyrade has reference to a bringhir down trom sume higher grade or degree of clevation. Thus, a priest is degraded from the clertal offce. When uscd in a moral sense, it denotes a bringing down in claracacter and just estimation; as, degraded by intemperance, a degrading employment, \&c. In gevlngy, degrade has the sense of bringing down pliysically; as, the rocks
were degraded by the action of the elements. - The noms were degraded by the action af the elements. - The noms
abasement, debasement, degradation, tollow the distincabasement, debasement, degradatio
A-bйsed' (bāst/), p. a. (Her.) Turned downward; - used of certain armorial bearings, when turned downward toward the point of the shicld. Chambers. A-büse'ment, u. [F1. cuaissement, Pr. abuissament.] The act of abasing, humbling, or bringing low; the state of depression, degradation, or humiliation.
 ABASHENG.] Formed like to base, from the Fr. abaisser: and like to bash, from baisser. Aneiently it was written abais, abaihssh, abaysch, 1, abaist, abaihsshed, abayschid.] To destroy the self-posmasion of to east downse or confound, as by exciting suddenly a consciousness of gailt, error, inferiority, and the like.

Abashed the devil stood,
And felt how awful goodness is.
Syn. - To confuse : confonnd, disconcert; shame To Abash, Confuse, Coxfouso. Abash is a stronger Word than confuse, lut net so strong as confound. Wo with s humbling sense of inferiority; as, fetcr wis abashed by the look of his Master. So a modest yonth Is abashed in the presence of those who are greatly his superiors. We are confused when, from sume mexpected per startling occurrence, we lose clearness of thanglit and
self-possession. Thus, a winess is onen confused by a self-possession. Thus, a withess is ofen confused by a
sesere eross-examination; a umid person is apt to be sesere eross-examination; a umid person is apt to be
confused in entering a room full of strangers. We are confounded when our minds are overwiclmed, as it were, by something wholly unexpected, amazing, dreadful, dee-, so as to have nothing to say. Thus, a criminal is usually
confounded at the discovery of his guilt. Awhile as mute, conjounded
A-bŭslineıt, $n$. Confusion
from shame.

 AnATiNG.] [Fr. abatire (for abbattre), Pr. abatre,
It. abbuttere, Sp. abutir, I'g. aboter, L. Lat. abuIt. abbuttere, Sp. abutir, I's. aboter, L. Lat. aba-
tere, abatire, from Lat. ab and batueze, battaere, to tere, abriture, from Lat. ab
beat, strike. See BATE.]

## 1. To beat or hatter down. [Obs.]

of The King of Scots . . . sore abated the walls pof the Castle 2. To bring down or reduce from a higher to a lower state, number, degree, Ne.; to lessen, to dlminish, to remit, to deduct; as, to abate a demand; to abate pr.de, zeal, hope, \&c.
Nine thousand parishes, ahating the odd hundreds. Filler.
3. To lessen the dignity or coasequeace of by deprivation; to deprive. [Obs.]

> She hath abrated me of half my train.
4. (Latu.) (a.) To briog entirely down or put an end to ; as, to abate a nuisance, to alate a writ. (b.) (Eing, Law.) To diminish; to reduce. Legacies are liahle to be abuted eatircly or io proportion, upon a deticiency of assets.

To abate a tax, 10 remit it either wholly or in part.
A-bäté, r.i. [imp. \& p.p. ABATED; p.pr. \& vb. n. ABATING.]

1. T'o deer
2. To decrense, or become less in strength or violence; as, pain abates: a storn abates.
3. To be defcated, or come to nauglit; to fail; $\mathrm{as}_{1}$
a writ abates.
4. (.Man.) perform well a downward motion. A horse is said to ubate, or take down his curvets, legs to the ground at oace, and obsorves the same exactuess at ill timues.
5. (lar.) Toenter into a freehold after the death of the last possessor, and before the heir or devisce takes posscesion. Lilackstone.
Syn, To subside; decresse; fntermit; decline; diminish; Jessen. - To Asate, scbside. These worts, ss here compared, imply a coming down from some previ-
eusly rased or excited stste. Abate expresses this in eusly rused or excited stste. Abate expresses this in respect to degrees, and implies a dine cold abates, the force of the wind abates: or, the wind abates, a fever abates. Subside (to settle down) has reterence to a previous state of asitation or commolionito a calm. When the words are nsed figuratively, the same distinetion sholld be olserved. If we conceive ot' a thing as laving ditferent degrees of insensity or strength, the word to be used is abate. Thus we say. A man's nager abates, the ardor of one"s love abates, "Winter's rabe abates." But if the
imse be that of a sinking down into quiet rom precedimsge be thst of a sinking down into quict from preced-
ingexcitement or commetion, the word to be used is subingexcitement or commotion, the word to be used is sub-
side; as, the tumult of the people subsides, the public side: as, the tumult of the people subsides, the phblic
mand subsided into a caln. The sanue is the cane with those emotions which are tumultuens m their natnre; as thise emotions which are tumutuens m their nature; as subsided into a pleasing miclanchuly, liet, if, In such might use abate; as, his joy will abate in the progress of time; and so in other instances.
A.bäte', n. Abatement. [Obs.]

Browne. A-binte'ment, $n$. [Fr. abuttement, Pr. abatansent, abatement.]

1. The act of abatiog, or the state of being abated; removal; diminution; reduction.
2. The sum, quantity, or amount by which any thing is abated; that which is taken away by way of reduction; deduction; decrease.
3. (Jer.) i mark of dishonor io a coat of arms, by which its digvity is debased for some stain on
the eharacter of the wearer. The only abatement the character of the wearer. The only abatement now used is the baston, or batton, jadicating bas-
Ogilrie. 4. (Lau.) The entry of a stranger into a freehold sfter the death of the last possessor, betors the heir or devisce. Blackstone. A-bãt'er, $n$. One who
stroys, or diminishes.
A-bat'on, $n$. A persou who, without right, eaters befo a freehold on the death of the list possessor betore the heir or devisec; one who prostrates of
Ab'a tis, (Synop., §130), n. [Fr. abatis, abattis, Aly'atis, from abuttre See ibate.] (Fort.) A row of the large branclaes of trees, sharpened and laid with the points outward, iu front of a fortification or any other position, to obstruct the approach of assailants. The larger ends of the
mranches are secured to the ground bs forked piekets.

## ABSTEMIOUSLY

Ab stérni oŭs-ly, adx: In an abstemious manner: temperately
Ab-stemi-onis ness, $n$. The quality of being abstemious, temperate, or sparims in the use of food and strong drinks.
Qu This worl expresses a greater degree of abstinence than temperance. It diffirs hon absimence because the latter may be teaporary
Ab-stĕn'tion, $n$. [Fr. alstention. See Abstain.] The act of holding off or restraining. Bp. Taylor.
 may have a common origin with the A-s. Ariman, diryan, ilragam, to dry, to rub dry, to wipe, O. Sax. drugan, iragan, to dry, ,om, II. Ger. Trakanan, truckunon, H. Ger. trocknen, Icel. therke, SW. torka, Gr. Tporgin; A-S. trocknen, Icel. therkir, SW. torka, Gr. Thereiv; A.s. drig, eryy, Eng. lry, O. Hh. Ger trakn, H. Ger. Absten'gent, a. [Lat. ubstergens, p . pro of ab steroere ; Fr. abstergent.] Serving to cleanse; de Ab-stãise
Atb-stirlser, $r, t$. To cleanse by wiping; to wipe clean; 10 absterge. See Absterge.] The act of wiping clean, or cleansing by lotions or similar applications.
The tazk of ablution and abstersion baviag beea performed.
At-stẽ'sive, $a$. [Fr. alstersif, Pr, abstersiu.] ]lav-
ang the quality of cleansing.
Ab-sténsive, $n$. Something cleansing. [Revere
The strong abstersice of some heroic magistrate. Shltom.
Abstlinence, n. [Lat. ubstinentia, Fr. abstinume, Pr, ubstinencia, ubstinensa.] The act or practice of abstaining; voluntary forbearance of iny action, especinlly the refraining from an indulgence of appetite, or from customary gratificatims of animal propensitics.
Taio, may, oftentimes a present pleasure that offers itself is a Penance fasts, aod abstmence,
To punish bodies for the fout's offecese.

Dryden. Total abstmence, an entire refraining from intoxicating linthors.
Xh'sti-men cs, $n$. Same as Anstinence. [Rare.]
Ab'stinenita. [Lat. nlistimens, b'stiment, a. [Lat. nustimens, p. pr. of abstinere;
Fr. and I'r. abstinent. See A usitiv.] Refraining from indulgence, especially in the use of food and $\mathbf{X}^{\text {drinktinent, n. }}$. (Eccl. Hist.) One of a sect which appeared in France and Spain in the third century, and which opposed marringe, condemsed the use of flesh meat, and placed the Iloly spirit in tbe class of created bcings.
Ab'sti-nentily, ode. With abstinence
Abstorted, a. (Lat, ab, ubs, and tortus, p. p. of torquere, to twist.] Forced away.

 and trekere, which is the English druw, q. v.; Fr: albstraire.]

1. To draw from or ecparate; ns, to abstract an netion from its evil effects.
He was incapable of forming eny opinion or resolution ab-
tracted from his own prejudices. 2. To draw off in respect to interest or attention; , his mind was wholly abstractre by other objects. 3. To separate, as ideas, by the operation of the mind; to consider by itself; to coatemplate separ-
rately, as a quatity or attribute.
IFhutely. 4. To epitomize or reduce. IVutts. property of another; to purloin; as, to abstract property of another; to purioin; as, to abstract 6. (Chem.) To separate, as the more volatile parts of a substance, by distillation.
CE In this sense extract is now more generally used.
 tion. [Rare.]
Abst ract (Synop., §130), a. [Lat. nlustractus, Fr. alstratit, Pr. abstrayt. See supru.].
2. Distinet from something else ; separate
3. Withdrawn from the concrete, or from particuhars; separate; as, an abstract subject; hence, dif-
hicult; abstruse; refined.
Locke. A concrete name is a name which stands for a thing: an
ataliact nume is a name which stands for an attribute of a amiract nume tis natme which stands for an attribute of a
thing. A practice has growo up in more modern times, which, it not introcuced hy Locke, has gained currency from his example, of applyit.g the expression abstract name names which are the result of abstraction and generalization, and consequenty to all gen
to the names ot attributes.
An abstract idea (Metaph.), an idea separated from a eomplex wbject, or from other iteas which naturally ac-
compunv it as the solidity ot marble when contempiated company tt: as the sobdy ot marble when contemphated which express abstract ideas, as beauty, whiteness, romdness, without regarding any subject in which they exist ; or "bstract lerms are the hames of orders, genera, or speces of thungs, in which there is a combination of aimilar qualtics.-. Abstract nmbers (Math.), numbers used without appheation to thinks, as $6,8,10$, but when apphed to iny thmg, as 6 feet. 10 men, they become con-crete-Abstract or pure mathenctics, that branch of
mathenatics which treats of mathitute or quantity,
withont restriction to any particular species of magnitude, as arithmetic and peometry:- opposed to mixed mathematzes, which treats of shuple properties. and the relations of quansity, as applice to sensible ubjects, as hydrostatics, navigation, optics, \&c.
Abstraet, \%. 1. That which comprises or concentrates in itself the essential qualitics of a larger thing, or of eeveral things; specifically, an inventhing, or of eeveral things; specincally, an inven-
tory, summary, or epitome, as of a truatise, book. tory, summary, or epitome, as of a tratise, book.
"An alstruct of every treatise he had read." Fatts.

## Man the abs.act <br> Of all perfection whech the workmanship

A state of separation from other things. Ford. 2. A state of separation from other things; as, to consider a subject in the abstruct, or apart from
other associated things. Abstract of title (Lato), an epitome of the cridences ownership.
Syn. - Abridgment; compeadium; epitome; synop-
AERIUGJBSt.
Ab-străev'ed, p. $a$. 2. Separate or disconnected; apart.

The evil one ahstracted stood from his own evil. Stilton. 2. Refined or purified. "Alsstractell spiritual
3. Ibstruse; dificult ; ahstract. Dolnane.
4. Inatentive to surroum?ing objects; absent in mind. "An abstractel kcholar"" "Johnsom. Ab-străet'ed-ly, ade. In all abstracted manner. Ab-striact'ed-ness, $n$. The state of bcing abIb stracted'fer, One who abstracts, or makecter. abstract. Ab shac'tion (-strik'shun), n. [N. Lat. abstructio, Fr. "the act of abstracting or separating, or the state of being scparaterl.
tate af being separaterl.
2 . (Nftiphe.) The act or process of leavines ont of consideration one or more properties of a complex olject, so as to attend to oth rs ; analysis. Thus,
when the mind considers the form of a tree by itecli, When the mind considers the form of a tree by itvelf,
or the color of the liaves as scarate frum their size or the color of the luaves as scparate frum their size
or figure, the act is ealled akstruction. So, also, or tigure, the act is calledl atsituction. so, also,
when it considers mhterues, soffuess, rirtue, existence, as separate from any particular objects.
: Abstraction is necessary to classification, hy which thues are arranked in tencra and species. We separate in ide athe qualities of certain objects, which are of the
same kind, from others which are dinerent in cach, nud Intac kind, from others which are diferent in cach, nind
sarange the oljects having the same properties in a class, arrange the object
or collected body:
Abstraction is no positive act: it is simply the nerative of
attention. 3. In idea or notion of as abetract, or theoretical nature; as, to fight for mere chatractions.
4. I separation from worldy objects ; a recluse life; as, a hermits dustractiom.
5. Absence of mind; inattion to present objuets; heedleessness
6. The theinges sureptitionsly for one's own nese part of the property of another. [Recent tesage ] 7. I sceparation ur volatife parts by the act of disXh'stratititions (-tish'us), a. Abstractuld. or drawn from other substances, particularly from vegetables, withour fermentation. ( 16 s.

## ABUSE

Alostril' (34), a. [Lat. absurdus, proceeding from one that is derf, or from that which is dull-Eounding, consequently giving an empty or harsh sound, ofterding the car, incongrnons; ab and surdus, deaf, not listening, dull sounding ; Fr. chsurde.] deaf, not istening, dult soumding ; Fr. adsurte. Opposed to mamber truth; meonsistent with rea-
son, or the plain dictates of common sease; logicalson, or the plain
ly contradictory.
'Tis phrase assurd to call a rillain great. $\quad$ Pope.
This protfer is absurd' and reasonless.

> This proffer is absurd and reasonless.

Syn. - Fowlish; urrational: rudiculens; preposterous;
 Ish, l'rFiostemots. Ot these terms, irrational is the weakest. denotmg that which is plainly inconsistent with the dictates uf sound reason; As, an irrational conrsa
of lite. Foolish rises higher, and implies ether o perverof lite. Foolish rises higher, and implies either a perversion of thut thenlty, or an absulute weakuess or fatuity highur reprenuler a persult deaf so the voice of reahighm, rent ans ounion or conduct us ouposed to the dictates son, and has numion or conduct as opposed to the dictiates pothesis, an alsurd nrgumesit, dc. freposterous rises still higher, and supposes an absolute inversion in the order of things; or, in plain terms, a "putting of tho cart before the horse: " as, a preposterous suggestion,
Ab-sifid', $n$. An act of absurdity. [Rare.]
This arch absurl that wit ead fool delights. Pope. Ah. suril'ity, $n_{\text {. [Fr. absurdité.] 1. The quality }}$ of being absird or inconsistent with obvious truth,
reason, or sonnd jurlgment. "Ihe absurdify of the netual iden of an intinite number."
2. That which is absurt.

His truvels were full of aksurdities. Johnson.
GF In this semse it has a plural.
Absind'ly, atro. In an alusurd manner.
Ab-stidi'licss, 7". 'l'le same as AbsLRDIT

- Iblista, he. The head of the Abyssinian church.
 flowing fullness; ample sullicicuey; great plenty; flowing fillness; ample sullicieney; great plenty; times used of number.
It is lamentable to remember whet aimadance of noble blood hath beeo shed with small beacit to the Christian state.
Raleigh.
Syn.-Exnberance; plentenusness ; plenty; cupions.
 each other in expressing the ldua of rulness. Henty each other in expressing the dora ol inthess. fincincy to suply every want; as, plenty of food, plenty of money, dic. Abundance expresses tuore, and gives the illea of sturerfuity or excess; $a S$, obmuance of riches, ann abundonce on wa high degrce. Eruberance rises still thigher, and implies a bursting Tumlt on every side, produchng great superfluity or re-
duthance; as, an exuberance of mirth, an exuberance of animal sprits, de.

Whose grievance is satiety of ease,
Frecdom their pain, and plenty their disease. Harte. At the whisper of thy word,
rashaw.
A-bŭn'alant, a. [Lat. alundans, p. pr. of abuatare; Fr. abmela

Thy abmiant good oess shall excuse
This deadly blot in thy digressiog son
Shat.
Syn.-Auple; plentiful; coprons; plenteous; exu-

Abundont number (Math.), one, the sum of whose aliguot parts exceeds the nimber itselt: Thus, $1,2,3$, is opposed to a deficient number, as 14 , whose alignot parts are $1,2.7$, the sum of which is 10 ; and to a perfect number, which is cqual to the sum of its aliquot parts, as 6 , whose aliquot parts are $1,2,3$.
A.bй"'alant ly, ode. In a suflicient degree; fully; amply ; plentifully.

 abusare, from Lat. alusus, p. p. of abuti, from ab and uti, to use. q. v.. 1

1. To make an ill or improper use of ; to use ill; to misuse; to wse with bad motives, to wrong purposce, or in a wrong as, to ubuse one's rights privileges; to cabuse words.

They that use this world as not abresing it. 1 Cor. vil. 31. 2. To treat rudely, or with reproachful language; o maltreat; to revile.
3. To deceive or impose on.

Their eyes red and stariag, cozeaed with moist cloud, end Syn. - To maltreat ; injure; deceive; cheat ; revile; epronch; vilify.
A bйse", n. [Lat. abusus, Fr. \& Pr. abus, Sp., Pg., \& 11. abuso. See supru.)

1. Ill use; improper treatment or employment; application to a wrong purpose; as, an abuse of uur natural poners: an abuse af eivil rights, or of reli. goords.
Laberty may be endangered by the abuses of liberty, as well
2. A corrupt practice or custom; as, the abuses government.
3. Rude speech ; reproachfill language addressed

Ae cern'sion, $n$. The act of kindling or setting on fire; or the state of being kindlet.
sons, cunere to sing Freentus, from at and cantus, song. cenere, to sing; Fr. encent. 1
fort upon some particular syllable of a fort upon some particular syllable of a word, distin
guishing it from the others. guishing it from the others.
O Many English worls have two aceents, the primary and the secomary, diticring only it dewree, the primary being uttered with a qreater stress of vone than the secmudary; as in as'pi-mation, where the chiuf stress is on the third syllable, and a slighter stress on the first, while the second and follth syllables are whully unac pre-hen'si-bil'i-tw, have two sucoudary or subordinate aceents. sec § 110-120.
2. A mark or character used in writing to regu ate the pronunciation
GE Our ancesturs birravel from the Greck language three of these characters, the acute (1), the grave (1) and the creumflex ( ${ }^{\sim}$ or $\hat{A}$ ). In warks on elocuthon, the first is attellused to denote the rising inflectuon, or manvement of the voice; the second, the falline inftection ant the thard, the compound or waving infecting. In cent is used to designate the syllable which receives the chuef stress of vaice.
3. A peculiar or characteristic modulation or modification of the voice; manner of spenking or pronouncing; as, a foreigh uccent. "A man of plain The tender nccent of a woman's cry. Pro
4. Words, language, or expressions in general.

Winds! on yonr wings to Teaven her accents bear,
5. (Mus.) A slight stress upon a tone to mark its position in the measurc.
Th This is called its arammatioal acrent: there is actions, and the oratorzcel. giving to music the espres sions ealled out by fueling.
6. (Sreth.) (a.) A mark placed at the right band of a letter, and a little above it, to distinguish magnitudes of a similar kinul expressed by the same letter, but differing in value, as $A^{\prime}, y^{\prime \prime \prime}$. (1.) (Trigon.) A mark at the right hand of a number, indicating minutes of a degree, seconels, \&e.; as, $12^{\prime} 2 \sigma^{\prime \prime}$, i. e.,
twelve minutes twenty seven seconds. (r.) (Erttwelve minutes twenty seven seconds. (c.) (En-
gin.) I mark used to donote feet and inches; $\mathrm{as}_{3}$ $6^{\prime} 10^{\prime \prime}$ is six feet ten inches.
 r. $n$. Accenting. ] To express or note the accent
of; to pronounce, utter, or mark of ; to pronounce, wtter, or mark with accent.
Accented parts of a measure (Mus.), those parts of the
medsurc on which the stress falls, as the dirst and third measurce on which the stress falls, as the first and third
in quadruple time.
Ae.feral'or, \%. [Lat. ad and cantos, singer, from l. (Mus.) Gne that sings the leading part. [ Obs.]
2. (Zoöl.) A genus of linds (so namul from their swect notes), inclading the hedge aparrow. Daird.
Ae rénl'in al, $a$. Pertaining to accent.

 To mark or pronounce with an necent or accents.
Ae-centin a/tion, $n$. [L. Lat. accenfatio, Fr. ac-
cemtmention.] The act of placing acents in wwitiog or of pronouncing them in epeabing Ae-fépt', $t$. [inup, in speaking.
tb. n. Acceptixg.] [Lat. accepiare, frea; p.pr.\& ere, from at and copere, to take; Pr. acceptur, Fr. accenter, Sp. aceptar, I'g. aceitar, It. accettare. ]

1. To take or raceive with in ottior or plesent. in otior or present.

It younccept them, then their worth is great. Shak.
2. To receive with favor or approbntion.

The Lord accep thy burnt sacritices. Ps. xx. 3. 3. To receive ol admit and agree to ; as, I accept lowed by ofosa,
4. (com.) To recelve as obligatory and promise to pay, as, to cucpht a hill of exchange. bourier.
5 . In a deliberative borly, to receive in acquittanee of a duty imposed ; as, to fecerne the report ot in ance of a duty imposed; as, to ricerpt the report of a committee. This makes it the property of the body,
and the question is then on its adoption.] and the question is then on its adoption.] To accept service (Lar), to agree that a writ or process
shall bo considered as regularly served, when it has not Syn. - To recelve; take; ndmit. Sce Recerve.

As řpt'n-BIe, a. [J. Lat, acceptabilis, Fr. acceptaole. Cnpable, worthy, or eure of being accepted or recerved with pleasure; hence, pleasing to a receiver; gratitying; agreeable; wclcotae; as, an accoptable present.

\section*{ANCIENT}
thought, se. Antiquated deseribes that which has gone ont of use or fashon; as, antiqualed furniture, antiquated laws, rules, ce. of antuputed, 1 n reference to anguge, customs, we.; as,
an obsolete word or pirase, an obsolete expression. Antique is applied, in present usage, either to that which has come down fron the ancients; as, an antique canco bust, de.; or to thiat which is made to imitate some an eient work of art; as, an antique temple. In the days of Shakespeare, antigue was otten ased for ancient; as, "an antique song," "an ontique Roman; and hence, from the singularity often attached to wiot is ancient, it was used in the sense of grotesque; as " an oak whose antigue root peeps out;" and hence exme onr present word antic, denoting grotesque or ridieulous. We usu
ally apply both ancieut and old to things subject to ally apply both ancieut and old to things subject to
gridual deety. Wre say, an old man, an ancient reegrd: but never, the old sun, old stars, an old river or monntain. In general, howover, ancient is opposed to modern, and old to nev, fresh, ar recent. When we speak of a thiog that existed forarerly, whieh has
ceased to exist, we commonly use ancient; as, ancient republles, ancient heroes; and not, old republies, old heroes. But when the thing whiel began or existed in for mer times is still ia existence, we use either anciont or old; as, ancient statues or paintings, or old statues or paintings; ancient authors, or old authors, meaning books.
In'elent, \(n\). I. \(p l\). Those wholived in former ages, as opposed to the morlerns.
2. \(p l\). Very old men. Hence, (a.) Governors; rulers. "the Lord will enter iato judgment with Lave.) The oldest barristers of Gray"s Ina, and those lawyers who are past their readings, in the Middle Temple. The inos of Chancery consist of 3. 1 senior; an elder. [Obs.]

Junius and Andronicus . . . in Christianity
4. [Corrupted from ensign, q. r.] A flag. [Obs.] More dishonorably ragged than 5. The bearer of a flag; - now called an ensign. This is Othello's ancicnt, as I take it.
Ancionts, Conncil of (French Hist.), one of the two assemblies composing the legislative bodies in 1795.
Brande. - Ancient demesne (Eng. Law), a tenure by which all manors belonging to the erown, in the reign of Williau the Conqueror, were held. The mumbers
dec., of these were all entered in a book called Domes-
day Book.
An'clent-Iy, adv. In ancient times; in times loog
Xin'cient.
Tiquity; existeace from oll times.

ness, diminlty, distress, from angustus, narrow, ness, dilliculty, distress, from angrestus, narrow, dificult, from unfere, to press together.
GER.] Extreme pain, cithur of body or mind And they hearkened nat to him, for unguish of spit
for cruel bondage.

\section*{or cruel bondage}

Syn. - Agony; distress; pang; torture; torment. See
Ang'sirislu, vof. [Fr. angoisser, Pr. angoissar, it angosciare. See supra.] To distress with extreme
pain or gricf. [lare.]
X \({ }^{2}\) 'gninir, ar. (Latt. angularis, from angulus, angle,
corner. Sce Angele.]
1. Having an angle or angles; pointed; as, an antmiluer lisure.
2. Consisting of an angle; forming an angle; an, an angul.ir poiot.
markably cengutar in his habits and appearance. Aupular motion, the motion of a body moving circnlsrly about a fixed point, as of a planet or pendulum.
Ifuiton- - Angular sections, that part of matlicmatics which treats of the division of angles into equal parts. Davies \&f Peck.-A Angular velocity, the rate at which \(n\)
borly vevolves around a fixel axis.

angles or corners.
An'gularsuess, \(n\). The quality of being nogular. An'guln'ted, \(a\). [Lat. enquinitus, p. p. of antuhture,
to make ankulir.] Formed witl angles or corners. "Anake ankular.] Formed with angles or corners.

 bent, and \(\mu\) erpur, a measure.] AD instrument for
A measuring external angles.

angulos.] Aogalirr ; having corners; Jooked. [obs.] Held tagether by hooks and angulons involutions. Chanville.
An gixat" "Lat. angustus, from ongere, to prese
angother. sec anger. Ninrow: stram. of mes.
tare, to make oarrow. ( Narrow ; diminishing rilp daly in breadth.
Xn'mŭs-in'lina, or. The act of making narrow; Erattening, or being made narrow. \(\quad\) Itseman. All gris'ti etave, \(n\). Lat. rmyusticlemius, warlog a narrow stipe, from minfustus, narrow, and cinuw, or tunic embroidered with purple stula or knobs, or or tunic embroidered worn by homan knights.

Xn'he.j̄̈'tion, 11. [Lat. anhelutio, from inheliere,
to draw the hreath from around the whole body, i. e. with great dilliculty, to pant, from an, for amb, q. \(v\). , and hulire, to lireathe.] Shorthess of breats; a pant-
ing ; dificult respiration. An Nēeler, \(t, i\). [Sece suptu.] To pant ; to be breath-
 finisho of our convocation."

Xn'hy-drīte, n. [N. Lat. anhydrites, from Gr, duvoos, waterless, from ar priv, and idwo, water.]
(Min.) Anlydrous gypsum, ditiering from gypsm An- Hot
 Sce sumpl.) Destitute of water; as, unhydrous salts Anİdi-o mǔt'ic-nI, \(a\). [Gr. dy priv. and Eng. idiumeticel.] Not idiomatical; opposed to the idiona, genima, or analogices of a languige.

You would bot say "two times;" it is andiomatical.
An'ient,
Xn'ientize,
v. \(t\). To frustrate; to bring to naught.
lobs.
An'ientize, (Obs.] .
 Xn'in, \(n\). (「y. \& Fr. amil, \&p. añil, Ar. an-mil, for al-mil, the indigo plant, from Skr. Mile, dark-blue, indigo, mili, imligo plant. Cf. Inatros.] (Bot.) A shrub from whose leaves and stalks indigo is made; A species of ludigofere, or indigo plant. Lromde. Xin'ile, n. [Lat. cmilis, pertaining to an old woresembling, an old woman; old womanish; imbecile. "Puerile or anile ideas."

> A childish or amle overacting of human testimony

Xu'iliue, n. [From anil, q. r.] (Chem.) A base analogons to nommonia, and consisting of twelve parts of carbon, seven of hydrogen, sand one of oi
trogen. li is yiedded by indigo and some other sub trogen. It is yiciation, and aflords a deep violet blue color with ehloride of lime
nnili ty', [Lat anititus.] The state of being
In'ile ness, "in old woran.
 womanl dotage. "Marks of mility." sterne.
An'i man ble, "r. [Lat. cmmunilis, from animure, to animate. Suc Ascmate.] Susceptible of animation [obs.] which has the power of perceiving and judging
 n. [Lat. mimuatersio, from mimhtervtere. See Animabvent.]
1. The act or power of percciving or taking nolice; perception. [ches.]
and sense. 2. Hemarks by way of censure or criticism; reproof; bliunc. Syn,-Sitricture: critleism; censure; remark; reAn'inmal van'sive, \(a\). Having the power of per ceiving; percipicnt. Gilemille. I do not mean therc is a certoin number of ideas glaring and Xu'i mund-ver'slveness, \(n\). The power of niliInalverting VERTED; p.pro \& ve. n. ANMAADVERTING.] [Lail. to turn to, from unf, to, and vertere, to turn.]
1. To turn the mind; with inkent to notice. "I 2. To consiler or remark by way of criticism or сенвите.
I shonld not animndyere on him, if he hat not used spenre. Druicn. 3. To hafiet punishment. [Obs.] Grew.
Syn. - To remark ; criticise; blame; cenature; com. Syn. - To rematk; cratiche; blame; cenature; comb-
ment.

1. Ans orkenized thlug heling endowed whith aensation and the power of volustary motion ; and also characterized ly taking ite fool into min hatrual cavity or momnch for disention; by tiving cirbonie
 agyreasive force with the progrens to mathrtys.
BE Lu these potuts anionals ifiter trom plants. Only a very few of tho owest anmats min of a stominch, unit

 cometerparts th the great syhtem of nuture. I lanathave no stonath, but recelve nutiflum through the exteram surface; they make no merease in montle forse as the embryodevclups, hut on the contrary, when the sbutes are mitlle, they lose the power inionedintely when devilng-
ment beghas.
Dina.

\section*{ANIMATE,}

a superior jultre or court for the parpose of reexamination or for decision. Blount. Tomlins
\[
1 \text { appeal to Cesar, }
\]

Acs xxv. 11.
2. To rufer to another for the decision of a question controverted, or the counteraction of testimony or facts: as, I appecel to all mankind for the trut
of what is alleged; hence, to call on one for aid. 1 appeal to thic Scriptures in the original. Horsley Appenal', v. \(t\). [imp)
rb.
n. Aprealiva.]
i. To summon; to challenge. [hare.] "Man to man will I appenl the Norman to the lists." "F. Scott. inferior to a superior judge or court. We say, the \(\begin{array}{ll}\text { inferior as apperior judge of court. Wre say, the } \\ \text { eituse wasappealed from an inferior court. } & \text { (b.) tho }\end{array}\) cathse wasappeated rom an inferior court. (b.) ro vate crimiaal mosecution against for some heinous oftense: as, to appeal a person of felony.
Ap-pēal', \(n\). [Fr. appcl, Pr. apcl. See supra.]
1. (Lere.) (re.) The remoral of a canse
from an inferior to a superior judge or court for reexamination or review. (b.) The mode of proceeding by which such removal is effecterl. (c.) The right of appeal. (d.) An accusation; a process which formerly might be instituted by one private person
against another for some heinons erime demanding ngainst another for some heinons crime demanding
punishaent for the particular injury suffered, rather punishole the offense against the public.
acensation of a felon at common law by one of his accomplices, which accomplice was then catled an approice. see Aprrovemext. Tomlins. Bomier.
2. A summons to Answer to a charge. Dryen.
3. A call upon a person for proof or decision, or to grant a favor; reference to another as witness. ders."
4. Resorl; recourse.
Erery mider method is
an apēal'a arms. that may be removed to aphigher tribung nopealectsion; ns, the canse is appeatable.
2. That may be nccused of called to answer hy appeal;-applied to persous; as, a criminal is ap pealable for manslangliter.
Ap-peaprant, u. One who appeals. [Obs.] Shuti.
Ap-pĕter, ??. One who appeals.
Ap-jйar'r, \(i\). [imp. \& p. \(p\). APreared; p. pr. \&
 rere, to appear, from ad and parerc, to come forth, to be visilsle.]
visible. The come or be in sight; to be in view; to be
Ame God said, Let the dry land apprar.
2. To stind in presence of some superior, as parfies or aulvocates before a conrt, or as persons to be tried. The defendant, being called, did not appar.
We must all appear before the judgment-sent of Christ.
3. T'o become risible to the apprehension of the mimd to be known as a subject of olservation or comprehensi

It doth not yet apperr what we shall be. 1 John iii. 2 Of their vain contest anpeared no end. Jillon.
4. To seem, in opposition to reality.

They disfigure their faces that they may aprear to men to
fust.
Stuk. vi. J 6 .
Syn. - Tu seem. Sce Seerr.

 1. The act of coming into sight; the act of b coning visible to the eye; as, his subden apperrance surprlsed me.
2.
ance in the slis.
3. Semblanee, or apparent likeness; external 3. Semblame or apparent likencss ; external
Fhow. "To save oppearances." Ther was upon the tabernaele, as it were, the appearanre
of fire. For man looketh on the outward appearancr. 1 Sam, xri. \(\%\). Judge not according to the appearance. John vii. 24.
4. Dersonal presence; exhibition of the person: mien; air; demenor.

And now am eome to see.
if thy appectratec answer
5. Exhibition of the character; infroduction of a person to the public in a paricular character ; an, a person makrs his
artist, or an orator.

6. Probability; Hkelihood. [Obs.] "There is that Which hath no "pperreance."
7. (Letto.) The
is that
incon. 7. (Letw.) The commg into cont of either of the parties: the being present in court; the coming lito himself or by his attorney, in an action, cittrer by entry by the proper nflicer to that eftect: the anmal procceding lyy which a party proeceuled agadnet phaces himself before the court, now sulmits to its Syn.-Coming; arrival; presence; semblance; jre, arf lonk; manher; mien; figure; nspect.

Appeaver, \({ }^{\text {Ap }}\). One who appears.
Ap-pear'ins-1y, ade. Apparently [. [Obs.] Bp, Hall. Ap-pens'a-nle, copinble of being appeased, Appeacrable ness, \(n\). The quality of being appcasabic.

1. To set it price or vilue o
1. To set a price or value on; to estimate justly
or truly; to value; as, we feldom futliciently apprecrint, the advantages we enjoy:
2. To raise the value of. [All Americanism.]

Lest a sudden neace should apprectate the money. Romsay. Syn. - To Abrplecate, Estimate, Esteebr. Estimate is an act of julgment; esteem is an act of valume sentiment of morill approbation. See Essus atti Apprecate lies betwent the two. As compared with esti-
mate, it supposes it 1 inion of sensibility will jutument. proulueing in mee and itencate perception. As compared whth esteem, it denotes a vatuation of things according to their appropriate and dasmetive excellence, ant not simply their morill worth. Thus, with reference to the former of these (delicate perception), an able writer says,
"Women have a truce appreciation of claracter thian "Wemen have a truce appreciation of character thinh ate the trie torce and distinctive sense of terns which we are every day thing," So, also, we speak of the dif-
ference betwen two things, as sometimes liardy appreference hetween wo things as sometimes lardly appre-
ciable. With referene to the litter of these senses (that of valuation as the result of a nice perception), we say, "It requires a pecular casi uf character to appreciate the poetry of Wordsworth; ". "He who has no thlicaly
himself, can not apmeciate it in others; " The thourdit of teath is salutary, beatuse it leads us to appreciut wortelly thinus urighit." Ampreciande is much uned in cances where something is in tander of henis overtheled or Indervalued; as when we speak of appreciating the difti-

 how to appreciace that silence, it is mane formiflable than
inc must clamorons opposition." In Jike manner, a perthe mast elamotons opposition." In like manner, a pro-
son who asks some faver of another, is apt to say trust yon will anprectate my motives in this revinest." Itere we have the key to a very fequent use of the word. the fimroly necessiry to say that appreciatc lonks (h)
the faver side ot things. We never speak of appreciating a naus tauls, but his merits. This idea of regatrdity things favorably appears more fully in the word ence, or an appreciative revicw, meanins onc that munifists a juick perecption and a ready valuation of exect-

Ap-pre'ci-ate, \(r\). \(i\). To rise in value; to become of more value; as, the coin of the conntry apprcciates ; publie securitics "ppprccintel when the debt was

nence, figuratively, to win the heirt of; mo iaten bind by motal inmuence;-with to: as, cttreched to a friend; attachingothers to us by wealth or nlattery: Solrimn, almost dead with fear, She then attuctied.
4. To connect, in a figurative sense; - with to as, to atfach great importance to a particular clromstance.
Syn. - To afflx; bint; tle; tack; fasten; commed
alujom; mace; win; gun over; charm; enamor.
At then'a-hle, a. Capable of being nitachecl, legally
or otherwise; linble to be taken by writ or precept.
- 111 achef (at-ta-shīi), n. [Fr. attaches, P. p. of attacher. Sce Atracir.] One nttached to another, as a part of bis suite or uttendants; specifically, one At-ach'ment, \(\bar{\prime}\). [Fro. ct tuchement.]
1. Act of attaching, or state of being attached; especially, close adhurence or affection; fidelity; regard; any passion or affection that binds aperson; as, an attuchment to a friensh, or to a party
. That by which one thmg is attached to anothas, to cut the altuche muscle.
The human mind... has exhausted its torees in the enhistory.
3. Some adjunct attached to an instrument, maChine, or other olject; as, the Eolian attachment to
 of a legal process. (b.) The writ or preecent commanding such selzure or talsing.
Tz The term is applied to a seizure or taking both of persons or property: In the serving of process in a civil stit, it is most generally applica to the taking of
property, either at conmon law, ins a species of distioss, property, either at connon hav, as a species of distress,
to coapel defendmet's mpurance, or under focal statutes, to satisty the julament the pliantiff may recover in the action. गhe tcras affachment and arrest are both applied to the taking orapprechensinn of a defendant to compct an nppenance in a civil action. Attachments are issued at coamuon law and in chancery igainst gersons for con-
tempt of comt. In England, all achment is emploved in tempt of court. I" Enyland dellachment is enployed in some cases where capias is with us; as against a withcss Who fails to appear on sumuluts. In some of the New
England States a writ of allachment is a species of mesne England states a writ of allachment is a species of mesne
process upon which the property of a defendhat may be process unon which the property of a defendint may be
seized at the counmenceusut of a suit and before sumseized at the coummencericut of a suit and before sum-
mons to hin, and may be hule to sitisty the judgment the monstinh, and may be hethe sitisty the jutgment the phaintiff way recover. Wh other states this writ can issue
only against absconding debtors and those who conceal

Syn. - Attachaest, Ahfectios. The leading iden of offection is that of warmith ama tenderness; the heame by strong and lasting ties There is more of sentiment (and sometimes of romance) in atfection, and anore of principle in persevering allachment. We speak of the ardor of the one, anm the sidelity of the other. There is ruother distinction between the nse and the application of these words. 'the terus allachment is opplied to wider range of objects that affection. A nath may havi a strong nitachmert to his combtry, to his profession, to lis princinles, and even to fiworite places: in
to none of these cunld we use the word affeclion.
A1-thek', v. \(t\). [imp. \& p,p. ATTACKED; p.pr. \& v. n. ATTACRING.] [F'y. attaquer, It. attaceare, to fas ten. Sec ATrACH.] and arms; to assault. "Alfack their lines." Drylen. 2. 'Io fall upon witl unfriendly words or writing: to begin a controversy with; to attempt io overtarow
 phlet. as, to atcere athen, or his oper ons decompose,

 form, and the others spectrie forms of attack. To alfack is to commence the obset : to essail y to bake a sutiters and vinlent attack: to assewld (Itrernlis, to lenp npon) is to attack with still freater velomence; to intade is to

 by means of missile weapons: be maty assaud hy divert prsonal violence; a king may onare by matchme ant tack with adgument of satire; fle assuil with ubusu or reproaches; they may be assanited by sevre tenptathons;
the rightes of the prople andy be inveded by the encroncl:ments of the crown.

\section*{\(\triangle \mathrm{UCTION}\)}
2. The things sold at auction.

Ask you why Prynae the whole auction buya? Pope CFT In America, the more prevalent expression has heen "sales \(n t\) auction," as it reterring to the place
where they are made. In England, the form las alwnys where they are made. In England, the form has always been "sales by auction." i. c., by an increase of bids (Lat. nuctione). This latter form is more correct. and is now coming into use in some of our leading newspapers Dutch nuction, the public offer of property at a price beyond its value, then gradually luwering the price, till
some one accepts it as nirchitser.

Bйnfingite, \(n\). A promissory note issucd by a bank or banking company, payable to bearer on domand, and intended to circulate as mones. Byles.
6F- Such notes, in England and America, form a large part of the currency. In America, they are populsriy termed bank-bills. Strictly spenking, a hank-note is no money, but by commonn usage
received snd treated as moncy.

Wharton. Burrill. McCulloch.
Bănk'rout, \(n\). [nbs.]. See Bankrlpt. Marston. bunk'rupt, r. (Fr. benqueroute, Sp. bancarrofa, lt. banco rotto, bankruptcy, from Fr . banque, Sp . banca, It. banco, bank, and Norm. Fr. ronpt, rous, Sumpere, to break; Ger. Bunkrott, formerly bankerot, bankruptey and bankrupt, a.]
1. (Fing. Lav.) A trader who secretes himself, or does certain other acts tending to defraud bis creditors.
G. In this scnse, a man may be a bankrupt and not insolvent, or insolvent and not a bankrupt.
2. A trader who breaks or fails, or becomes unable to pay his debts in the ordinary course of trade; an insolvent trader.
3. Any individual unable to pay hia debis; an insolvent.

McCulloch.
tri- In strictness, no person hut a trader can be a bankrupt. Bankrupley is applicd to merchants and traders, insolvency to other persons. This distinction is not preserved in the Cuited Sistes, the tendency behng to
apply the terms bankrupt and insolrent to the same apply the terms bankrupl and makelent to the sama
deseription of persons. In the United Sistes bankrupt aw of lisfl. repeatedin ast, the kin barkrupis was applied to uthers besides merchants and traders, and in that united so the featires of both systems are onited in united. So the fentures of both systems are united in many of the state insolvent laws. And in England in rent laws is much less positive and exset than it formerly was.

Fankrupt lav. a law which, upan a bankrupt's surfendering all his propertyrges hum from the payment of his debts, and all liability to arrest or suil for the same, and secures his future acquired property from a liability to the payment of his past debis. Sce lisulvest. Bankrupt system, a system of laws and legal proceeding in regarll to bankrupts and their property.
Bunk'rupt, \(a\). Haring committed acts of bank, ruptcy; unable to pay,
king a grown bankrupt."
 \& t.b. n. BANRRUPTING.] To break in trade; to make insolvent.
